Received 19 February 2009; accepted 19 February 2009

Key indicators: single-crystal X-ray study; $T = 100\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.004\text{ \AA}$; R factor = 0.034; wR factor = 0.091; data-to-parameter ratio = 19.1.

The title structure, $\text{C}_{22}\text{H}_{22}\text{BrNOS}_2$, is a triclinic modification. Whereas the other reported modification crystallizes with just one molecule in the asymmetric unit, the present modification has $Z' = 2$. The six-membered cyclohexene ring adopts an envelope conformation, with the C atom bearing the two methyl groups representing the flap. This atom deviates by $0.674(4)\text{ \AA}$ from the plane passing through the other five atoms of the ring (r.m.s. deviation = 0.027 \AA). For the second independent molecule, the deviation is $0.669(3)\text{ \AA}$ and the r.m.s. deviation is 0.010 \AA . The molecular conformation of both molecules is stabilized by intramolecular $\text{N}-\text{H}\cdots\text{S}$ hydrogen bonds.

Related literature

For background and the other triclinic modification of $\text{C}_{22}\text{H}_{22}\text{BrNOS}_2$, see: El Ashry *et al.* (2009).

Benzyl 2-(4-bromoanilino)-4,4-dimethyl-6-oxocyclohex-1-enecarbodithioate: second triclinic polymorph

E. S. H. El Ashry, M. R. Amer, M. R. Shah and S. W. Ng

Comment

(type here to add)

Experimental

To a solution of 3-(4-bromoanilino)-5,5-dimethyl-cyclohex-2-en-1-one (0.1 mol) in DMSO (20 ml) and sodium hydroxide (0.1 mol) in water (1 ml) was added carbon disulphide (0.3 mol). The mixture was kept at 263 K for 20 min. Benzyl bromide (0.1 mol) was added. The mixture was left for 24 h, after which it was quenched with water (200 ml) and then acidified with 10% hydrochloric acid. The resulting precipitate was collected by filtration, dried and purified on a silica gel column (30% ethyl acetate in hexane) to give orange crystals (40% yield).

Refinement

Carbon-bound H-atoms were placed in calculated positions (C—H 0.93 to 0.99 Å) and were included in the refinement in the riding model approximation, with $U(H)$ set to 1.2 to $1.5U(C)$. The methyl groups were allowed to rotate but not to tip. The amino H-atoms were located in a difference Fourier map, and were refined with a distance restraint of N—H 0.88 ± 0.01 Å; their isotropic displacement parameters were freely refined.

Figures

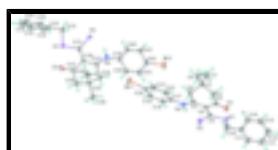

Fig. 1. Anisotropic displacement ellipsoid plot (Barbour, 2001) plot of the two independent molecules of $C_{22}H_{22}BrNOS_2$ at the 70% probability level; hydrogen atoms are drawn as spheres of arbitrary radius.
