Received 23 February 2009; accepted 6 April 2009

Key indicators: single-crystal X-ray study;  $T = 294$  K; mean  $\sigma(\text{N}-\text{C}) = 0.007$  Å;  
 $R$  factor = 0.031;  $wR$  factor = 0.083; data-to-parameter ratio = 15.9.

In the title compound,  $[\text{AgCl}(\text{C}_2\text{H}_2\text{N}_2\text{S}_2)]_n$ , the Ag<sup>I</sup> ion has a distorted tetrahedral geometry, defined by two S atoms of two symmetry-related 1,3,4-thiadiazolium-2-thiolate ligands and two chloride ions. The Ag<sup>I</sup> ions are bridged into a two-dimensional network parallel to the *ab* plane by chloride ions and thiadiazole ligands. In the network, the Ag<sup>I</sup> ions are separated by 4.0316 (12) Å along the *a* axis and by 4.8822 (13) Å along the *b* axis. N—H···Cl hydrogen bonds are observed within the network.

### Comment

The asymmetric unit of the title compound consists of one Ag<sup>I</sup> ion, one 1,3,4-thiadiazolium-2-thiolate ligand, and one Cl atom. As depicted in Fig. 1, the Ag<sup>I</sup> ion is coordinated by two S atoms from two thiadiazole ligands and two Cl atoms in a distorted tetrahedral geometry. The Ag—S and Ag—Cl bond distances (Table 1) are within the range expected for such coordination bonds (Dinger *et al.*, 1998; Wei *et al.*, 2008). The thiadiazole ligand shows a monodentate bridging mode. The adjacent Ag<sup>I</sup> atoms are bridged by Cl atoms to form chains, which are cross-linked by thiadiazole ligands to form a two-dimensional network parallel to the *ab* plane (Fig. 2). In the network, the Ag atoms are separated by 4.0316 (12) Å along the *a* axis and 4.8822 (13) Å along the *b* axis. Intramolecular N—H···Cl hydrogen bonds are observed in the network (Table 2).

### Experimental

1,3,4-Thiadiazolium-2-thiolate (0.5 mmol) was added at room temperature to a ammonia solution (10 ml) of AgCl (0.5 mmol). After the addition, a colourless precipitate immediately formed and the suspension was stirred for 2 h. The precipitate was filtered off and washed with MeCN. Single crystals suitable for X-ray analysis were obtained by slow diffusion of Et<sub>2</sub>O into a water solution of the solid.

### Refinement

H atoms were positioned geometrically and treated as riding, with N—H = 0.86 Å and  $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{N})$ , and C—H = 0.93 Å and  $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$ .

### Figures

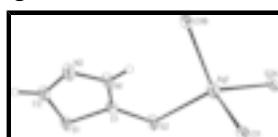

Fig. 1. A view of the local coordination of the Ag<sup>I</sup> atom in the title compound. Displacement ellipsoids are drawn at the 30% probability level. Symmetry codes: (A) 2 -x, y - 1/2, 1/2 - z; (B) x - 1, y, z.

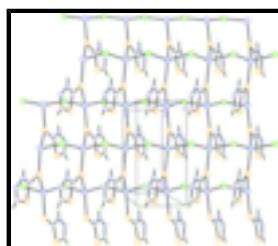

Fig. 2. A view of the two-dimensional network parallel to the *ab* plane.
