Received 24 June 2009; accepted 26 June 2009

Key indicators: single-crystal X-ray study;  $T = 140\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.006\text{ \AA}$ ; disorder in main residue;  $R$  factor = 0.043;  $wR$  factor = 0.114; data-to-parameter ratio = 18.5.

The  $\text{Sn}^{IV}$  atom in the title compound,  $[\text{Sn}(\text{C}_4\text{H}_9)_2(\text{C}_{19}\text{H}_{13}\text{BrN}_2\text{O}_3)]$ , shows a distorted *cis*- $\text{C}_2\text{NO}_2\text{Sn}$  trigonal-bipyramidal coordination. Both butyl chains and the naphthoxy portion are disordered over two sets of sites of equal occupancy.

### Experimental

The Schiff base (0.4 g, 1 mmol) from the condensation reaction of 5-bromo-2'-hydroxyacetophenone and 3-hydroxy-2-naphthoic hydrazide and dibutyltin oxide (0.25 g, 1 mmol) were dissolved heated in ethanol (100 ml) until the oxide dissolved completely over an hour. Slow cooling of the filtrate gave the product as yellow crystals.

### Refinement

Both butyl chains are disordered over two positions. One chain is disordered in all four carbon atoms whereas the other is disordered in only the  $\beta$ ,  $\gamma$  and  $\delta$  atoms only. As the occupancy refined to nearly 50:50, this was fixed as exactly 50:50. The C–C distance was tightly restrained to  $1.500 \pm 0.005$  Å and the C···C distance to  $2.35 \pm 0.01$  Å.

The hydroxynaphthyl portion is also disordered over two positions. The occupancy was also set as 50:50. The naphthyl fused-ring was refined as a rigid ring of 1.39 Å sides. The C17–C19 and C17–C19' distances were restrained to within 0.01 Å of each other, as were the O3–C20 and O3'–C20' distances.

For the chains and fused-ring, the temperature factors of the primed atoms were restrained to those of the unprimed ones; the anisotropic temperature factors were restrained to be nearly isotropic.

Hydrogen atoms were placed at calculated positions (C–H 0.95–0.98 Å) and were treated as riding on their parent atoms, with  $U(H)$  set to  $1.2\text{--}1.5 U_{\text{eq}}(\text{C})$ . The hydroxy H-atom was similarly treated.

The final difference map had a peak near Sn1 and a hole near Br1.

### Figures

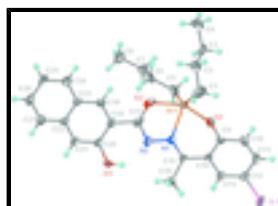

Fig. 1. Thermal ellipsoid plot (Barbour, 2001) of  $\text{Sn}(\text{C}_4\text{H}_9)_2(\text{C}_{19}\text{H}_{13}\text{BrN}_2\text{O}_3)$  at the 70% probability level. Hydrogen atoms are drawn as spheres of arbitrary radius. One of the disordered components is not shown.
