Comment

Derives of heteroaromatic ligands have proven to be extremely popular amongst coordination chemists for a wide range of applications because of their ease of synthesis, ease of functionalization, and the steric protection which they afford to metal centres (Zhang *et al.*; Liu *et al.*; Kida *et al.*). Here, we report the synthesis and structure of the title compound, (I).

As shown in Fig. 1, non-hydrogen atoms including the pyridine ring, *N,N*-Dimethylamino, and prop-2-en-1-one are coplanar with Rms deviation of fitted atoms being 0.0724 Å. The title compound is synthesized from 2-acetylpyridine and *N,N*-dimethylformamide-dimethyl acetal by one step.

Experimental

A mixture of 2-acetylpyridine(10 mmol) and *N,N*-dimethylformamide-dimethyl acetal(40 ml) was refluxed for four hours. After concentration in vacuo, recrystallization of the orange residue from ethanol afforded yellow blocks of (I). Anal. Calc. for C₁₀H₁₂N₂O: C 68.10, H 6.81, N 15.89%; Found: C 68.02, H 6.63, N 15.79%.

Refinement

All H atoms were geometrically positioned (C—H = 0.93–0.97 Å) and refined as riding with U_{iso}(H) = 1.2U_{eq}(C) or 1.5U_{eq}(methyl C).

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
