Received 22 September 2009; accepted 1 October 2009

Key indicators: single-crystal X-ray study; $T = 294$ K; mean $\sigma(C-C) = 0.007$ Å; R factor = 0.033; wR factor = 0.064; data-to-parameter ratio = 13.2.

In the title compound, $[Ag_3(C_8H_6N_3)_3]$, the asymmetric unit contains three silver cations and three deprotonated 5-(2-pyridyl)pyrazol-1-ido ligands. Each silver cation is chelated by one 5-(2-pyridyl)pyrazol-1-ido ligand, which also acts as a bridging ligand towards the next silver ion *via* the second pyrazole N atom. In summary, three silver cations and three deprotonated 3-(2-pyridyl)-1*H*-pyrazole ligands produce a macrocyclic trimeric coordination oligomer that exhibits an almost planar conformation (mean deviation 0.1483 Å). In addition, short non-bonding $Ag \cdots Ag$ interactions [3.127 (2) Å] are observed.

cyclo-Tris[μ -5-(2-pyridyl)pyrazol-1-ido- $\kappa^3N^1,N^5:N^2$]trisilver(I)

Z. An and R.-J. Zhou

Comment

Deprotonated 3-(2-pyridyl)pyrazole is a potentially tridentate ligands and its derivatives have been widely used for the construction of supramolecular architectures by their ability of producing coordination compounds (Ward *et al.* 1998; 2001). As a continuation of these studies, we now report the crystal structure of the title complex.

As shown in figure 1, the asymmetric unit contains three silver cations and three deprotonated 5-(2-pyridyl)pyrazol-1-ide ligands. Each silver cation is chelated with one 5-(2-pyridyl)pyrazol-1-ide ligand, which in addition acts as a bridging ligand towards the next silver ion *via* the second pyrazole nitrogen.

In summary, three silver cations and three deprotonated 5-(2-pyridyl)pyrazol-1-ide ligands produce a macrocyclic trimeric coordination oligomer that exhibits an almost planar conformation. In addition, short non-bonding Ag-Ag interactions (3.127 (2) Å) are observed.

Experimental

The synthesis of the title compound is performed in 25 ml Teflon-lined stainless steel vessels. Powdered 3-(2-pyridyl)pyrazole (1 mmol) together with silver nitrate (1 mmol) is heated to 170°C in 10 ml of a water/ethanol mixture (1:1) for 24 h. Colorless crystals were obtained after cooling to room temperature.

Refinement

All hydrogen atoms were positioned geometrically and were refined using a riding model with C—H = 0.93 Å and $U_{\text{iso}}(\text{H})$ = 1.2Ueq(C).

Figures

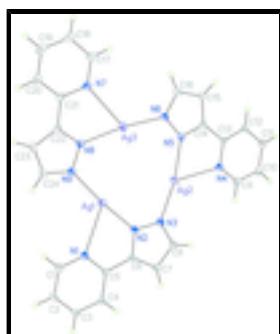

Fig. 1. A view of the title compound with the atom-labelling scheme. Displacement ellipsoids are drawn at the 30% probability level.

Refinement

Refinement on F^2	Secondary atom site location: difference Fourier map
Least-squares matrix: full	Hydrogen site location: inferred from neighbouring sites
$R[F^2 > 2\sigma(F^2)] = 0.033$	H-atom parameters not refined
$wR(F^2) = 0.064$	$w = 1/[\sigma^2(F_o^2) + (0.02P)^2]$ where $P = (F_o^2 + 2F_c^2)/3$
$S = 1.00$	$(\Delta/\sigma)_{\text{max}} = 0.005$
4294 reflections	$\Delta\rho_{\text{max}} = 0.41 \text{ e \AA}^{-3}$
325 parameters	$\Delta\rho_{\text{min}} = -0.41 \text{ e \AA}^{-3}$
Primary atom site location: structure-invariant direct methods	Extinction correction: none

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations

between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
