(3,5-Dinitro-1,3,5-triazinan-1-yl)-methanone

Qiao-Ling Zhang, Xiao-Feng Qu and Jian-Long Wang*

School of Chemical Engineering and Environment, North University of China, Taiyuan, People's Republic of China
Correspondence e-mail: wangjianlong@nuc.edu.cn

Received 2 October 2009; accepted 12 October 2009

Key indicators: single-crystal X-ray study; $T = 293$ K; mean $\sigma(\text{C}-\text{C}) = 0.003$ Å; R factor = 0.051; wR factor = 0.142; data-to-parameter ratio = 14.4.

In the title compound, $\text{C}_5\text{H}_9\text{N}_5\text{O}_5$, prepared from hexamine by acetylation and nitration, the triazine ring adopts a chair conformation with all three substituent groups lying on the same side of the ring.

(3,5-Dinitro-1,3,5-triazinan-1-yl)methanone

Q.-L. Zhang, X.-F. Qu and J.-L. Wang

Comment

1-Acetyl-3,5-dinitro-1,3,5-triazinane (1-acetylhexahydro-3,5-dinitro-1,3,5-triazine) (I) is obtained as a by-product in the synthesis of hexahydro-1,3,5-trinitro-1,3,5-triazine (RDX) from 1,3,5,7-tetraazaadamantane (hexamine) by the Bachmann process (Bachmann & Sheehan, 1949). As part of our search for the reaction mechanism involved in the nitrolysis of hexamine, we synthesized the title compound, and describe its structure here.

In (I), the hexahydrotriazine ring adopts a chair conformation with all three substituent groups lying on the same side of the triazine ring. The ring bond distances and angles are almost identical (the maximum deviation from the average C—N bond distance [1.44 (8) Å] is 0.01 Å and the maximum deviation from the average bond angle [112 (3)°] is 3°). The three ring N atoms are equally distant from the plane through the C atoms (C1, C2 and C3) (0.40±0.06 (2) Å). This deviation is slightly larger than that found in hexahydro-1,3,5-triacetyl-1,3,5-triazine (TRAT) (Choi *et al.*, 1975), due to the three different substituent groups on the hexahydrotriazine ring in (I), whereas in TRAT, the three groups are the same. In (I) the three substituent groups are essentially planar with maximum deviations from the mean plane of these groups for atoms N1, N2 and N3 of 0.02 (4), 0.09 (6) and 0.10 (3) Å respectively.

Experimental

The title compound was prepared from hexamine according to a literature method (Warman *et al.*, 1973). Crystals suitable for X-ray analysis were obtained by slow evaporation of a nitromethane solution at room temperature.

Refinement

All H atoms were positioned geometrically and treated as riding, with C—H bond lengths constrained to 0.97 Å (alicyclic CH), 0.96 Å (methyl CH), and with $U_{\text{iso}}(\text{H}) = 1.2$ (1.5 for methyl groups) times $U_{\text{eq}}(\text{C})$.

Figures

Fig. 1. The molecular structure and atom numbering scheme for the title compound (I). Non-H atoms are shown as 50% probability displacement ellipsoids.

Fig. 2. The packing of the title compound, viewed down the *c* axis of the unit cell.

$l = -12 \rightarrow 12$

Refinement

Refinement on F^2

Least-squares matrix: full

$R[F^2 > 2\sigma(F^2)] = 0.051$

$wR(F^2) = 0.142$

$S = 1.03$

1988 reflections

Hydrogen site location: inferred from neighbouring sites

H-atom parameters constrained

$$w = 1/[\sigma^2(F_o^2) + (0.09P)^2]$$

where $P = (F_o^2 + 2F_c^2)/3$

$(\Delta/\sigma)_{\max} = 0.002$

$\Delta\rho_{\max} = 0.28\ \text{e \AA}^{-3}$

$\Delta\rho_{\min} = -0.26\ \text{e \AA}^{-3}$

138 parameters

Extinction correction: *SHELXL97* (Sheldrick, 2008),

$$F_c^* = kF_c [1 + 0.001 \times F_c^2 \lambda^3 / \sin(2\theta)]^{-1/4}$$

Primary atom site location: structure-invariant direct methods

Extinction coefficient: 0.242 (16)

Secondary atom site location: difference Fourier map

Special details

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.
