Received 11 November 2009; accepted 15 December 2009

Key indicators: single-crystal X-ray study; $T = 296\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.002\text{ \AA}$; R factor = 0.035; wR factor = 0.103; data-to-parameter ratio = 16.7.

In the title compound, $[\text{Na}(\text{H}_2\text{O})_4](\text{C}_{15}\text{H}_9\text{N}_2\text{O}_2)$, the Na^+ ion is coordinated by six water molecules in an octahedral geometry. The NaO_6 octahedra are connected by sharing edges, forming a cationic chain along the b -axis direction. $\text{O}-\text{H}\cdots\text{O}$ and $\text{O}-\text{H}\cdots\text{N}$ hydrogen bonds link the chains and the 2-(2-pyridyl)-quinoline-4-carboxylate anions into a two-dimensional network parallel to (100).

Comment

2-(2-pyridyl)quinoline-4-carboxylic acid is a 2,2'-bipyridyl-like ligand containing a carboxylate substituent, which represents a simple route to some important functionalities. The syntheses of sodium 2-(2-pyridyl)quinoline-4-carboxylate and 2-(2-pyridyl)quinoline-4-carboxylic acid have been reported (Bass *et al.*, 1997; Convers *et al.*, 2004). The structures of 2-(2-pyridyl)-4-methylcarboxyquinoline and its Ru complex have been reported by Farah *et al.* (2003). Here we present the structure of a sodium salt of 2-(2-pyridyl)quinoline-4-carboxylate in a tetrahydrate form.

The molecular structure of the title compound is shown in Fig. 1. The Na^+ ion is coordinated by six water molecules in an octahedral geometry. Each coordination octahedron is connected with two adjacent ones by sharing edges, forming a cationic $[\text{Na}(\text{H}_2\text{O})_4]_n$ chain along the *b* direction (Fig. 2).

In the crystal structure, the cationic chains and the organic anions are linked through O—H \cdots O and O—H \cdots N hydrogen bonds into a layer structure (Table 1 and Fig. 3).

Experimental

Sodium 2-(2-pyridyl)quinoline-4-carboxylate was prepared by a literature method (Bass *et al.*, 1997). Colourless crystals were obtained by slow evaporation of an aqueous solution of this compound at room temperature.

Refinement

H atoms bonded C atoms were positioned geometrically and refined as riding atoms, with C—H = 0.93 Å and with $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$. H atoms of water molecules were found from difference Fourier maps and refined as riding atoms, with O—H = 0.85 Å and with $U_{\text{iso}}(\text{H}) = 1.5U_{\text{eq}}(\text{O})$.

Figures

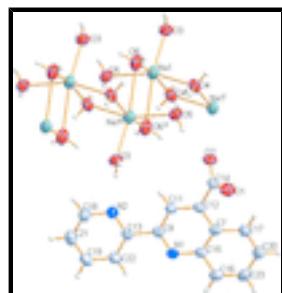

Fig. 1. The structure of the title compound. Displacement ellipsoids are drawn at the 50% probability level. [Symmetry codes: (i) 1 - x , 1 - y , 1 - z ; (ii) 1 - x , 2 - y , 1 - z .]

supplementary materials

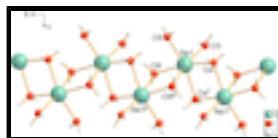

Fig. 2. The chain of NaO_6 octahedra along the b axis. [Symmetry codes: (i) $1 - x, 1 - y, 1 - z$; (ii) $1 - x, 2 - y, 1 - z$.]
