Key indicators: single-crystal X-ray study;  $T = 293\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.004\text{ \AA}$ ;  $R$  factor = 0.049;  $wR$  factor = 0.117; data-to-parameter ratio = 13.6.

In the title compound,  $\text{C}_{18}\text{H}_{17}\text{N}_3$ , the two pyridyl rings make a dihedral angle of  $54.55(13)^\circ$ . The dihedral angles between the phenyl ring and the two pyridyl rings are  $73.61(13)$  and  $81.40(13)^\circ$ . In the crystal, weak intermolecular  $\text{C}-\text{H}\cdots\pi$  interactions are observed.

## N,N-Bis(2-pyridylmethyl)aniline

### Comment

Bis(pyridin-2-ylmethyl)amine derivatives are often used as zinc probes (Royzen *et al.*, 2006; Komatsu *et al.*, 2007; Xiang & Tong, 2006). The title compound, *N,N*-bis(pyridin-2-ylmethyl)aniline, has been also used as a ligand in metal complexes (Nielsen *et al.*, 2005, 2007; Bjernemose *et al.*, 2003; Hazell *et al.*, 2000; Uguzzoli *et al.*, 2002). Herein, we report the molecular and crystal structure of this compound. The molecule has three rings trending to different orientations, of which the dihedral angle between the two pyridyl rings is 54.55 (13) $^{\circ}$ , and the dihedral angles between the phenyl ring and the two pyridyl rings are 73.61 (13) and 81.40 (13) $^{\circ}$ . Intermolecular C—H $\cdots$  $\pi$  interactions exist in the crystal, which connect molecules into a two-dimensional layer structure.

### Experimental

The title compound was synthesized according to previous reported literature (Foxon *et al.*, 2007). Single crystals suitable for X-ray diffraction were obtained by slow evaporation of a solution of the title compound in acetone at room temperature.

### Refinement

H atoms were placed geometrically with C—H distances of 0.93–0.97 Å and refined using a riding model, with  $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$ .

*Hydrogen-bond geometry (Å, °)*

Cg1 and Cg2 are the centroids of the C8—C12/N2 and C1—C6 rings, respectively.
