Received 19 April 2010; accepted 30 April 2010

Key indicators: single-crystal X-ray study; $T = 100\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.009\text{ \AA}$; disorder in main residue; R factor = 0.058; wR factor = 0.172; data-to-parameter ratio = 19.4.

The ‘symmetrical’ 1,5-bis[1-(2-hydroxyphenyl)ethylidene]-thiocarbazone Schiff base condenses with dibutyltin oxide to form the title complex, $[\text{Sn}(\text{C}_4\text{H}_9)_2(\text{C}_{17}\text{H}_{16}\text{N}_4\text{O}_2\text{S})]$, in which the deprotonated ligand O,N,S -chelates to the Sn atom of two crystallographically independent molecules. The ligand bears a formal negative charge on the S and one O atom; the other O atom retains its H atom. The Sn atoms are five-coordinated in a *cis*- C_2NOSSn trigonal-bipyramidal environment, and the apical sites are occupied by the O and S atoms. In both molecules, the hydroxy group is hydrogen bonded to a double-bonded N atom, generating a six-membered ring. The amino group is a donor to the coordinated O atom of an adjacent molecule, the hydrogen-bonding interaction giving rise to a helical chain running along the b axis. In one of the independent molecules, the atoms of one of the *n*-butyl groups are disordered over two sets of sites with equal occupancy. In the other independent molecule, the atoms of both *n*-butyl groups are disordered over two sets of sites with equal occupancy and, in addition, the Sn and S atoms were also refined as disordered over two sets of sites with equal occupancy.

Di-*n*-butyl{1-[1-(2-hydroxyphenyl)ethylidene]-5-[1-(2-oxidophenyl)ethylidene]thiocarbazonato- κ^3O^5,N^5,S }tin(IV)

M. A. Affan, D. N. A. C. Chee, Z. Assim and S. W. Ng

Comment

There are many crystallographic studies on metal derivatives of the Schiff bases derived by condensing salicyldehyde (and acetophenone) with semithiocarbazide (and thiocarbazide). 1,5-Bis(2-hydroxyacetophenone) thiocarbazone is a 'symmetrical' ligand; however, in the title di-*n*-butyltin derivative (Scheme I, Fig. 1), the doubly-deprotonated ligand chelates in a *O,N,S*-manner and only part of the molecule is used in coordination. There are two independent molecules. The tin atoms are five coordinate in a *cis*-C₂NOSSn trigonal bipyramidal environment, and the apical sites are occupied by the oxygen and sulfur atoms. The hydroxy group is hydrogen bonded to a double-bond nitrogen atom to generate a six-membered ring.

Experimental

1,5-Bis(2-hydroxyacetophenone) thiocarbazone was synthesized by using a literature method (Ren *et al.*, 1999). The compound (0.66 g, 2 mmole) was dissolved in methanol (20 ml). Potassium hydroxide (0.23 g, 4 mmol) dissolved in methanol (5 ml) was added. The orange solution was then treated with di-*n*-butyltin dichloride (0.61 g, 2 mmol) in methanol (10 ml). The mixture was heated for an hour. The solution was filtered. The evaporation of the solvent gave a product that was recrystallized from ethanol in 60% yield; m.p. 401–403 K.

Refinement

Hydrogen atoms were placed in calculated positions (C—H 0.93 to 0.97, N—H 0.86, O—H 0.824 Å) and were included in the refinement in the riding model approximation, with *U*(H) set to 1.2 to 1.5*U*_{eq}(C,N,O).

All aromatic rings were refined as rigid hexagons of 1.39 Å sides. Three of the four *n*-butyl chains were refined as two chains of 0.5 occupancy. The 1,2-related distances were restrained to 1.500±0.005 Å and the 1,3-related ones to 2.350±0.005 Å; tight restraints were used, which led to a somewhat large weighting scheme. The temperature factors of the primed atoms were set to those of the unprimed one; the anisotropic temperature factors of the carbon atoms of the chains were restrained to be nearly isotropic.

The Sn1 atom is disordered with respect to Sn1' and the S1 with respect to S1'. Their occupancies were assumed to be 0.5. The anisotropic temperature factors of these four atoms were also restrained to be nearly isotropic. Additionally, the tin–element and tin–element_{primed} distances were restrained to within 0.01 Å of each other. The final difference Fourier map had a peak in the vicinity of the butyl chain belonging to Sn2, and a deep hole in the vicinity of the Sn1/Sn1' atoms.

Some 161 restraints were used to treat the disorder.
