Received 29 April 2010; accepted 30 April 2010

Key indicators: single-crystal X-ray study;  $T = 100\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.002\text{ \AA}$ ;  $R$  factor = 0.044;  $wR$  factor = 0.153; data-to-parameter ratio = 21.6.

The seven-membered ring in the title compound,  $\text{C}_{18}\text{H}_{16}\text{N}_2\text{O}$ , adopts a boat conformation with the two phenylene carbons representing the stern and the methylene C atom the prow. The dihedral angle between the best plane through the seven-membered ring and the phenyl ring is  $62.13(3)^\circ$ .

## Related literature

### 1-Allyl-4-phenyl-2,3-dihydro-1*H*-1,5-benzodiazepin-2-one

D. Ballo, N. H. Ahabchane, H. Zouihri, E. M. Essassi and S. W. Ng

#### Comment

The compound belongs to the class of benzodiazepine drugs; the background to this class of pharmaceutically potent compounds is explained in an earlier report (Ahabchane *et al.*, 1999). It is readily synthesized by reacting 4-phenyl-1,5-benzodiazepin-2-one with allyl bromide in the presence of a catalyst. The compound features a seven-membered ring fused with a phenylene ring (Scheme I, Fig. 1).

#### Experimental

To a solution of 4-phenyl-1,5-benzodiazepin-2-one (1 g, 4.2 mmol) in DMF (20 ml) was added allyl bromide (0.5 g, 4.2 mmol), potassium carbonate (1 g, 7.4 mmol) and a catalytic quantity of tetra-*n*-butylammonium bromide. The mixture was stirred at room temperature for 24 h. The solution was filtered and the solvent removed under reduced pressure. The residue was recrystallized from ethanol to afford the title compound as colorless crystals.

#### Refinement

H-atoms were placed in calculated positions (C—H 0.95–0.99 Å) and were included in the refinement in the riding model approximation, with  $U(\text{H})$  set to  $1.2U_{\text{eq}}(\text{C})$ .

#### Figures

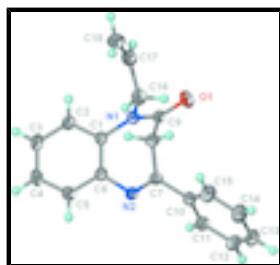

Fig. 1. Anisotropic displacement ellipsoid plot (Barbour, 2001) of  $\text{C}_{18}\text{H}_{16}\text{N}_2\text{O}$  at the 70% probability level; hydrogen atoms are drawn as spheres of arbitrary radius.
