Received 12 January 2011; accepted 7 March 2011

Key indicators: single-crystal X-ray study;  $T = 298\text{ K}$ ; mean  $\sigma(\text{C}-\text{C}) = 0.003\text{ \AA}$ ;  $R$  factor = 0.042;  $wR$  factor = 0.113; data-to-parameter ratio = 9.7.

In the title compound,  $\text{C}_{30}\text{H}_{52}\text{O}_5$ , the three six-membered rings are in chair conformations, the five-membered ring is in an envelope form and the tetrahydropuran ring has a conformation intermediate between half-chair and sofa. Intramolecular  $\text{O}-\text{H}\cdots\text{O}$  hydrogen bonds may influence the conformation of the molecule. In the crystal, molecules are linked by intermolecular  $\text{O}-\text{H}\cdots\text{O}$  hydrogen bonds, forming a three-dimensional network.

### Related literature

The title compound was prepared from 20(*S*)-proto-panaxatriol which was degraded from *Panax quinquefolium* saponin. For background to and the medicinal properties of *Panax ginseng* and *Panax quinquefolium*, see: Shibata *et al.* (1985); Takano *et al.* (1999); Yu *et al.* (2007); Wang *et al.* (2010). For related structures, see: Shi *et al.* (1992); Meng *et al.* (2010).

### Experimental

#### Crystal data

#### **Comment**

Both Panax ginseng and Panax quinquefolium, belonging to Araliaceae, are well known traditional medicinal herbs. They are used as tonics and for the treatment for diseases, such as tumor and myocardial ischemia. Panax ginseng contains numbers of saponins, namely ginsenoside and an oleanolic acid-type saponin in addition to the major protopanaxadiol and protopanaxatriol-type saponins (Shibata *et al.*, 1985). Panax quinquefolium contains an ootillol-type (20S, 24R-epoxyside) saponin with high anti-tumor activity (Takano *et al.*, 1999), as well as oleanolic acid-type, protopanaxadiol and protopanaxatriol-type saponins. (3R,6R,12R,20S,24S)-20,24-Epoxy-dammarane-3,6,12,25-tetraol and (3R,12R,20S,24R)-20,24-epoxy-dammarane-3,12,25-triol are found to possess cardioprotective effect on myocardial injury induced by isoproterenol in rats (Yu *et al.*, 2007; Wang *et al.*, 2010). As part of our ongoing investigation of ootillol-type compounds and their cardioprotective effect on myocardial injury, we report herein the crystal structure of the title compound, (I).

The molecular structure of (I) is shown in Fig. 1. In the molecule, all bond lengths and angles are within normal ranges (Shi *et al.*, 1992; Meng *et al.*, 2010). The six-membered rings A(C11,C13,C16,C17,C18,C19), B(C13,C15,C16,C22,C32,C33), and C(C22,C24,C25,C26,C29,C32) are in chair conformations. Ring D(C8,C9,C10,C11,C19) has an envelope form with atom C11 forming the flap. The tetrahydrofuran ring has a conformation intermediate between half-chair and sofa forms. In the crystal, molecules are linked by O—H···O hydrogen bonds (Table 1) to form a three-dimensional network.

#### **Experimental**

20(S)-protopanaxatriol was degraded from Panax quinquefolium saponin with sodium in glycerine at about 473 - 503K and separated by silica flash chromatography. (3R,6R,12R,20S,24R)-20,24-Epoxy-dammarane-3,6,12,25-tetraol was synthesized from 20(S)-protopanaxatriol in the presence of *N,N*-dimethylaminopyridine, pyridine and acetic anhydride. The esters were oxidized by *m*-CPBA and the title compound was obtained by saponification with sodium hydroxide in DMSO and separated by silica flash chromatography. Finally, the crystals were dried at room temperature the title compound was crystallized from ethyl acetate. Single crystals suitable for X-ray measurements were obtained by recrystallization of an acetone solution of the title compound at room temperature.

#### **Refinement**

In the absence of significant anomalous dispersion effects the Friedel pairs were merged. All H atoms were fixed geometrically and allowed to ride on their attached atoms, with C—H distances in the range 0.93–0.97 Å; O—H = 0.86 Å and with  $U_{\text{iso}}(\text{H}) = 1.2U_{\text{eq}}(\text{C})$  or  $1.5U_{\text{eq}}(\text{Cmethyl},\text{O})$ . The absolute configuration is based on unchanging stereochemical centers in the synthesis

### Data collection

Bruker SMART CCD diffractometer	2911 reflections with $I > 2\sigma(I)$
Radiation source: fine-focus sealed tube graphite	$R_{\text{int}}$ = 0.020
$\varphi$ and $\omega$ scans	$\theta_{\text{max}} = 26.0^\circ$ , $\theta_{\text{min}} = 2.0^\circ$
16320 measured reflections	$h = -14 \rightarrow 15$
3141 independent reflections	$k = -16 \rightarrow 17$
	$l = -17 \rightarrow 19$

### Refinement

Refinement on $F^2$	Primary atom site location: structure-invariant direct methods
Least-squares matrix: full	Secondary atom site location: difference Fourier map
$R[F^2 > 2\sigma(F^2)]$ = 0.042	Hydrogen site location: inferred from neighbouring sites
$wR(F^2)$ = 0.113	H-atom parameters constrained
$S$ = 1.05	$w = 1/[\sigma^2(F_o^2) + (0.0809P)^2 + 0.2644P]$
3141 reflections	where $P = (F_o^2 + 2F_c^2)/3$
325 parameters	$(\Delta/\sigma)_{\text{max}} < 0.001$
6 restraints	$\Delta\rho_{\text{max}} = 0.26 \text{ e \AA}^{-3}$
	$\Delta\rho_{\text{min}} = -0.24 \text{ e \AA}^{-3}$

*Special details*

**Geometry.** All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

**Refinement.** Refinement of  $F^2$  against ALL reflections. The weighted  $R$ -factor  $wR$  and goodness of fit  $S$  are based on  $F^2$ , conventional  $R$ -factors  $R$  are based on  $F$ , with  $F$  set to zero for negative  $F^2$ . The threshold expression of  $F^2 > \sigma(F^2)$  is used only for calculating  $R$ -factors(gt) etc. and is not relevant to the choice of reflections for refinement.  $R$ -factors based on  $F^2$  are statistically about twice as large as those based on  $F$ , and  $R$ -factors based on ALL data will be even larger.
