Received 31 May 2011; accepted 18 June 2011

Key indicators: single-crystal X-ray study; $T = 100$ K; mean $\sigma(C-C) = 0.006$ Å; disorder in main residue; R factor = 0.033; wR factor = 0.106; data-to-parameter ratio = 19.3.

In the title carboxylate-bridged polymer, $[Sn(C_7H_7)_3(C_7H_5O_3)]_n$, the Sn^{IV} atom exists in a distorted *trans*-C₃SnO₂ trigonal-bipyramidal geometry. The polymer propagates as a chain along the a axis. There are two independent formula units in the asymmetric unit; the furyl ring of one of the anions is disordered over two positions in a 0.630 (8):0.370 (8) ratio. The crystal studied was a non-merohedral twin with a minor twin domain of 37.3 (1)%.

catena-Poly[[tribenzyltin(IV)]- μ -(E)-3-(2-furyl)prop-2-enoato- $\kappa^2 O:O'$]

T. C. Keng, K. M. Lo and S. W. Ng

Comment

We have reported tribenzyltin 3-phenylprop-2-enoate recently; the compound exists as a carboxyate bridged polymer whose repeat distance is half the *b*-axial length (Lo & Ng, 2011). Replacing the phenyl unit by a furyl unit gives the corresponding polymeric compound (Scheme I). The Sn^{IV} atom in $[Sn(C_7H_7)_3(C_7H_5O_2)]_n$ exists in a *trans*-C₃SnO₂ trigonal-bipyramidal geometry (Fig. 1). The polymer propagates as a chain along the *a*-axis with a repeat distance that is half the *a*-axial length.

Experimental

Tribenzyltin hydroxide (0.4 g, 1 mmol) and furylacrylic acid (0.14 g, 1 mmol) were heated in ethanol (50 ml) for 2 h. The solution was filtered; evaporation of the solvent gave colorless crystals.

Refinement

Carbon-bound H-atoms were placed in calculated positions (C—H 0.95 to 0.98 Å) and were included in the refinement in the riding model approximation, with *U*(H) set to 1.2*U*(C).

One of the furan rings is disordered over two positions. The furan ring was refined subject to the atoms being restrained to a bonding distance of 1.35±0.01 Å. The ring was restrained to near planarity. Because the ring is disordered so that the O atom overlapped with a C atom, the temperature factors of O3 were set to those of C47. Those of O3' were set to those of C47'. Additionally the temperature factors of the disordered atoms were restrained to be nearly isotropic. In view of the twinned nature of the crystal, this treatment was considered adequate.

Figures

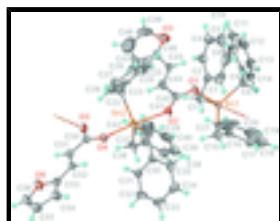

Fig. 1. Thermal ellipsoid plot (Barbour, 2001) of a portion of the polymeric chain structure of $[Sn(C_7H_7)_3(C_7H_5O_2)]_n$ at the 70% probability level; hydrogen atoms are drawn as spheres of arbitrary radius. The disorder in one of the furyl rings is not shown.
