Received 11 August 2011; accepted 13 August 2011

Key indicators: single-crystal X-ray study; $T = 100\text{ K}$; mean $\sigma(\text{C}-\text{C}) = 0.002\text{ \AA}$; R factor = 0.031; wR factor = 0.083; data-to-parameter ratio = 14.1.

The two aromatic rings of the title compound, $C_{11}H_{13}N_3O_2S$, are inclined at an angle of $47.81(4)^\circ$. The N atom of the amino unit is pyramidal coordinated; one H atom interacts with the sulfamyl O atom of an adjacent molecule, forming a centrosymmetric hydrogen-bonded dimer. The dimers are linked by $\text{N}-\text{H}\cdots\text{N}$ hydrogen bonds, generating a three-dimensional network.

Related literature

For the synthesis and medicinal properties of the title compound, see: Grueneberg *et al.* (2002); Wright *et al.* (1964).

4-(3,5-Dimethyl-1*H*-pyrazol-1-yl)benzenesulfonamide

A. M. Asiri, H. M. Faidallah, A. O. Al-Youbi and S. W. Ng

Comment

The title compound (Scheme I) was first synthesized in order to examine its anti-diabetic activity (Wright *et al.*, 1964). It has also been listed in a virtual screening of compound libraries in order to search for possible medicinal properties (Grueneberg *et al.*, 2002). The two aromatic rings are inclined at 47.81 (4)°. The N atom of the amino unit is pyramidal coordinated (Fig. 1). One H atom interacts with the sulfamyl O atom of an adjacent molecule to form a centrosymmetric hydrogen-bonded dimer; the dimers are linked by an N–H···N hydrogen bond to generate a layer motif.

Experimental

2,4-Pentanedione (10 mmol) and 4-hydrazinobenzenesulfonamide hydrochloride (10 mmol) were heated in ethanol (50 ml) for 4 h; water was then added to precipitate the product. This was collected and recrystallized from ethanol to yield orange crystals; m.p. 516–517 K.

Refinement

Carbon bound H-atoms were placed in calculated positions [C–H 0.95 to 0.98 Å, $U_{\text{iso}}(\text{H})$ 1.2–1.5 $U_{\text{eq}}(\text{C})$] and were included in the refinement in the riding model approximation.

The amino H-atoms were located in a difference Fouier map and were refined with a distance restraint of N–H 0.88±0.01 Å; their displacement parameters were freely refined.

Figures

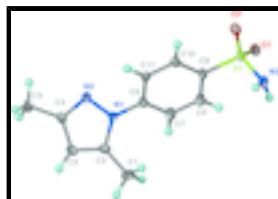

Fig. 1. Anisotropic displacement ellipsoid plot (Barbour, 2001) of $\text{C}_{11}\text{H}_{13}\text{N}_3\text{O}_2\text{S}$ at the 70% probability level; hydrogen atoms are drawn as spheres of arbitrary radius.
