Received 15 February 2012; accepted 15 February 2012

Key indicators: single-crystal X-ray study; $T = 100$ K; mean $\sigma(C-C) = 0.002$ Å;
 R factor = 0.027; wR factor = 0.077; data-to-parameter ratio = 21.9.

In the title compound, $C_{20}H_{22}BrN_5O_2 \cdot 2H_2O$, the Schiff base molecule exists in an *E* conformation with respect to the acyclic $C\equiv N$ bond. An *S*(6) ring motif is formed *via* an intramolecular $O-H\cdots N$ hydrogen bond. The dihedral angle between the imidazo[1,2-*a*]pyridine system and the benzene ring is $84.62(5)^\circ$. In the crystal, $N-H\cdots O$, $O-H\cdots O$, $O-H\cdots N$, $C-H\cdots O$ and $C-H\cdots Br$ hydrogen bonds link the molecules into a three-dimensional network. The crystal packing is further stabilized by $C-H\cdots \pi$ and $\pi\cdots \pi$ interactions [centroid–centroid distance = $3.5365(7)$ Å].

2-(8-Bromoimidazo[1,2-a]pyridin-2-yl)-N'-(*E*)-4-diethylamino-2-hydroxybenzylideneacetohydrazide dihydrate

Hoong-Kun Fun, Wan-Sin Loh, Seema Shenvi, Arun M. Isloor and Gurumurthy Hegde

Comment

Hydrazones constitute an important class of biologically active drug molecules (Seleem *et al.*, 2011) which has attracted attention of medicinal chemists due to their wide range of pharmacological properties. These compounds are being synthesized as drugs by many researchers in order to combat diseases with minimal toxicity and maximal effects. A number of hydrazone derivatives have been reported to exert notably antimicrobial, antihypertensive, anticonvulsant, analgesic, anti-inflammatory, antituberculosis, antitumoral, antiproliferative and antimalarial activities (Rollas & Küçükgüzel, 2007). Imidazopyridine is the fundamental heterocyclic component of principal anthelmintic drugs. In addition, the imidazopyridine ring possesses many anti-infective properties including antibacterial (Ertepinarl *et al.*, 1995; Liang *et al.*, 2007), antiviral (Hamdouchi *et al.*, 1999; Gudmundsson & Johns, 2007), antiprotozoal (Biftu *et al.*, 2006) and especially anthelmintic (Fisher & Lusi, 1972; Bochis *et al.*, 1981) activities. Therefore, the imidazopyridine ring could replace the benzimidazole ring in the design and the development of new anthelmintic agents. In view of its biological importance, we hereby report the crystal structure of (I).

The title compound (Fig. 1) consists of one 2-(8-bromoimidazo[1,2-a]pyridin-3-yl)-N'-(*E*)-[4-(diethylamino)-2-hydroxyphenyl]methylidene}acetohydrazide molecule and two water molecules. The Schiff base molecule exists in an *E* configuration with respect to the acyclic C=N bond. An S(6) ring motif (Bernstein *et al.*, 1995) is formed *via* the intramolecular O2—H1O2···N4 hydrogen bond. The dihedral angle between the imidazo[1,2-a]pyridine (C1—C5/N2/C6/C7/N1) and the benzene (C11—C16) rings is 84.62 (5)°.

In the crystal packing (Fig. 2), intermolecular N3—H1N3···O2W, O2—H1O2···O1W, O2—H1O2···N4, O1W—H1W1···N1, O1W—H2W1···O1, O2W—H1W2···O1W, O2W—H2W2···O1W, C5—H5A···O1, C10—H10A···O2W and C17—H17B···Br1 hydrogen bonds link the molecules into a three-dimensional network. The crystal packing is further stabilized by C—H···π interactions, involving the 1*H*-imidazole (N1/C1/N2/C6/C7; Cg1; Table 1) and benzene (Cg3; Table 1) rings. Weak π—π interactions were observed involving 1*H*-imidazole, pyridine (N2/C1—C5; Cg2) and benzene rings. [Cg1···Cg1 = 3.5365 (7) Å; symmetry code: 1 - *x*, 1 - *y*, 1 - *z*; Cg1···Cg2 = 3.6210 (7) Å; symmetry code: 1 - *x*, 1 - *y*, 1 - *z*; Cg3···Cg3 = 3.6253 (8) Å; symmetry code: -*x*, -*y*, 2 - *z*].

Experimental

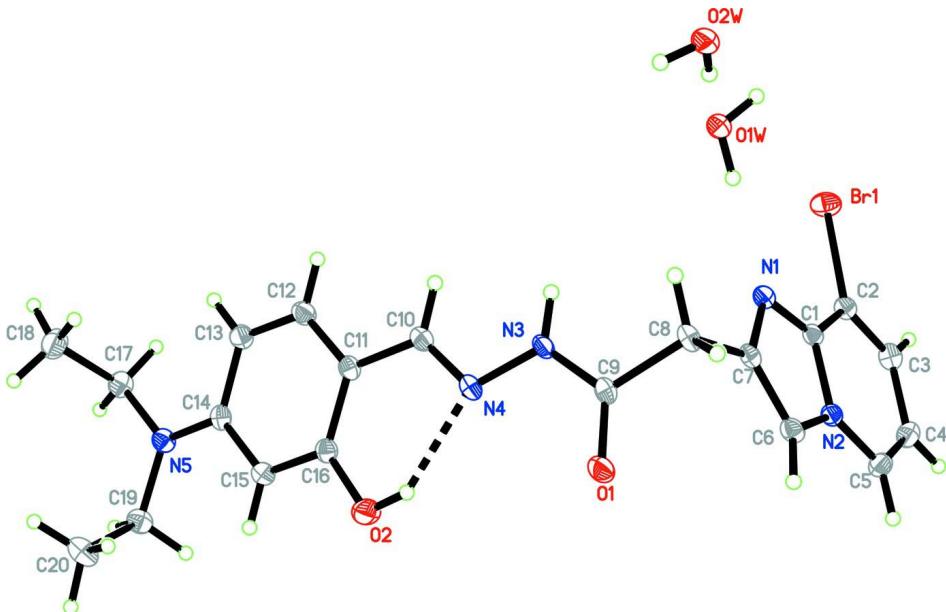

The mixture of 2-(8-bromoimidazo[1,2-a]pyridine-3-yl)acetohydrazide (200 mg, 0.00074 mol), 4-(diethylamino)-2-hydroxy benzaldehyde (143.6 mg, 0.00074 mol) and a catalytic quantity of acetic acid (0.1 ml) and ethanol (10 ml) was stirred overnight at 90°C. On cooling, orange plate-shaped crystals of the product begins to separate. It was collected by filtration and recrystallized from ethanol. Yield: 307.7 mg, 93.2%. m.p. 401–402 K.

Refinement

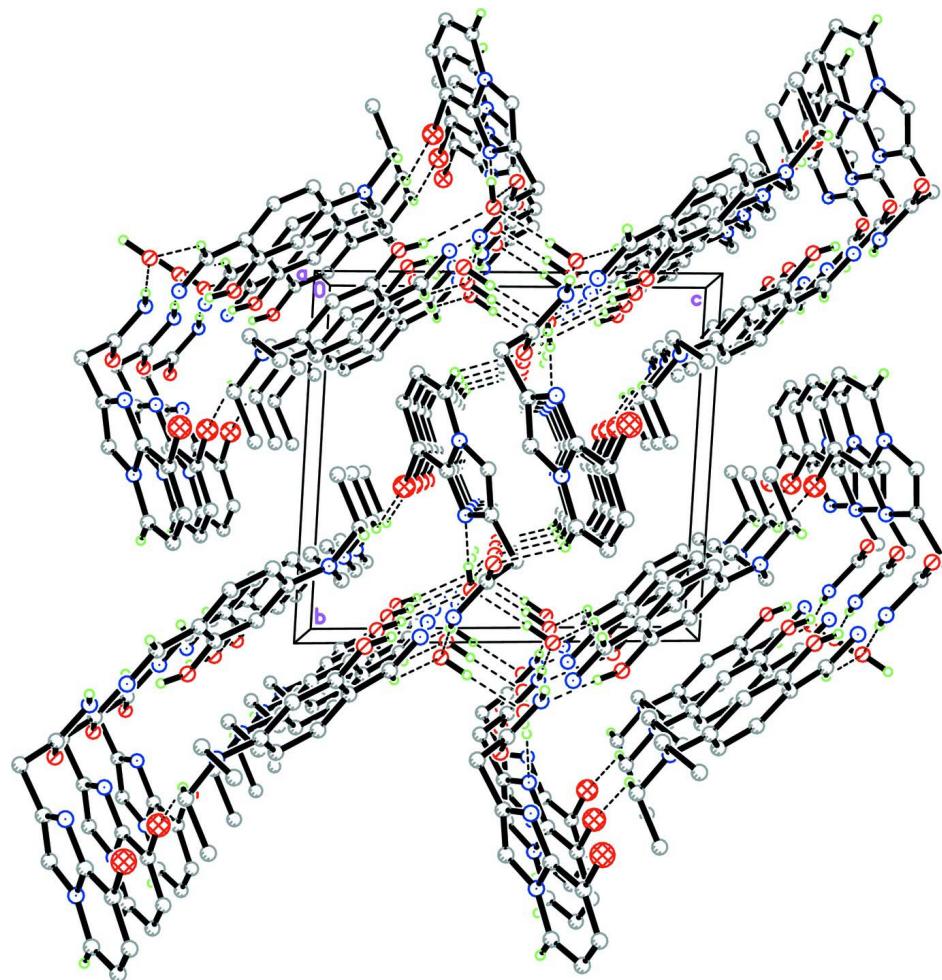

O- and N-bound H atoms were located from the difference Fourier map and were refined freely [O—H = 0.80 (3) to 0.87 (3) Å; N—H = 0.896 (19) Å]. The remaining H atoms were positioned geometrically and refined with a riding model with $U_{\text{iso}}(\text{H}) = 1.2$ or $1.5U_{\text{eq}}(\text{C})$ [C—H = 0.93 to 0.97 Å]. A rotating group model was applied to the methyl groups. Three outliers were omitted in the final refinement, 230, 541 and 365.

Computing details

Data collection: *APEX2* (Bruker, 2009); cell refinement: *SAINT* (Bruker, 2009); data reduction: *SAINT* (Bruker, 2009); program(s) used to solve structure: *SHELXTL* (Sheldrick, 2008); program(s) used to refine structure: *SHELXTL* (Sheldrick, 2008); molecular graphics: *SHELXTL* (Sheldrick, 2008); software used to prepare material for publication: *SHELXTL* (Sheldrick, 2008) and *PLATON* (Spek, 2009).

0 restraints	$\Delta\rho_{\text{min}} = -0.24 \text{ e \AA}^{-3}$
Primary atom site location: structure-invariant direct methods	

Special details

Experimental. The crystal was placed in the cold stream of an Oxford Cryosystems Cobra open-flow nitrogen cryostat (Cosier & Glazer, 1986) operating at 100.0 (1) K.

Geometry. All e.s.d.'s (except the e.s.d. in the dihedral angle between two l.s. planes) are estimated using the full covariance matrix. The cell e.s.d.'s are taken into account individually in the estimation of e.s.d.'s in distances, angles and torsion angles; correlations between e.s.d.'s in cell parameters are only used when they are defined by crystal symmetry. An approximate (isotropic) treatment of cell e.s.d.'s is used for estimating e.s.d.'s involving l.s. planes.

Refinement. Refinement of F^2 against ALL reflections. The weighted R -factor wR and goodness of fit S are based on F^2 , conventional R -factors R are based on F , with F set to zero for negative F^2 . The threshold expression of $F^2 > \sigma(F^2)$ is used only for calculating R -factors(gt) etc. and is not relevant to the choice of reflections for refinement. R -factors based on F^2 are statistically about twice as large as those based on F , and R -factors based on ALL data will be even larger.
