

# Acta Numerica 1997

## Volume 6

### CONTENTS

Constructing cubature formulae: the science behind the art

*Ronald Cools*

Wavelet and multiscale methods for operator equations

*Wolfgang Dahmen*

A new version of the Fast Multipole Method for the Laplace equation in three dimensions

*Leslie Greengard and Vladimir Rokhlin*

Lanczos-type solvers for nonsymmetric linear systems of equations

*Martin H. Gutknecht*

Numerical solution of multivariate polynomial systems by homotopy continuation methods

*T. Y. Li*

Numerical solution of highly oscillatory ordinary differential equations

*Linda R. Petzold, Laurent O. Jay and Jeng Yen*

Computational methods for semiclassical and quantum transport in semiconductor devices

*Christian Ringhofer*

Complexity theory and numerical analysis

*Steve Smale*

Acta Numerica is an annual publication containing invited survey papers by leading researchers in numerical mathematics and scientific computing. The papers present overviews of recent developments in their area and provide 'state of the art' techniques and analysis.
