ADVANCED FUNCTIONAL MATERIALS

A detailed illustration of a microfluidic device. A green substrate is covered with a grid of circular wells. Each well contains a droplet with a unique, colorful pattern, including concentric circles, spirals, and branching structures in shades of blue, yellow, and green. Two grey robotic arms with white cylindrical tips are positioned over the wells, with one arm dispensing a small droplet into a well. The background features a blue grid of circles, suggesting a larger array of similar wells.
