

ACKNOWLEDGMENTS

Funding under the Sixth European Framework (project NMP3-CT-2005-516961 – Bio-based functional materials from engineered self-assembled peptides (BASE)) together with a number of bilateral connections allowed not only advancing the science and technology of self-assembly peptides but also brought together many creative people on many occasions. It was in fact a symposium in 2007 organised by Prof. Anton Middelberg at University of Queensland, Australia, that connected many of the authors and set the frame for the structure of this volume. I thank all the contributing authors for their time and efforts – a nice piece of work! Writing about science and technology is nothing without the people that make the publication possible. In particular Professor Guy Marin provided continued encouragement to stick to the timeline. The Elsevier staff was always helpful to make things happen in order to turn the words into print. Obviously, there are those many invisible hands and minds that contributed to this process and whom I also want to thank. Finally, I want to thank you the reader for taking up interest in this fascinating world of peptide self-assembly. Enjoy the reading!
