

Successful dexrazoxane treatment of a potentially severe extravasation of concentrated doxorubicin: Erratum

Anti-Cancer Drugs 2010, **21**:968

There is an error in the text that appears on pages 791–792: ‘Tests for liver and renal function remained within normal limits. However, grade 2 anemia and thrombocythemia were observed. On day 12, the extravasated site remained stable, but the anemia and the thrombocythemia worsened to grades 3 and 4, respectively (Table 1)’.

Should have read: ‘Tests for liver and renal function remained within normal limits. However, grade 2 anemia and thrombocytopenia were observed. On day 12, the extravasated site remained stable, but the anemia and the thrombocytopenia worsened to grades 3 and 4, respectively (Table 1)’.
