

## Errata

Antiviral Research, Vol. 4, No. 3 (1984):

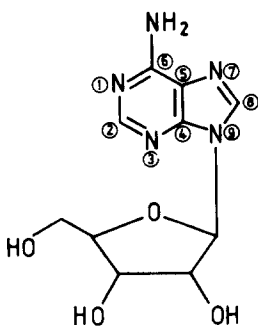

p. 119: The authors names should read:

Erik De Clercq<sup>1</sup>, Donald E. Bergstrom<sup>2</sup>, Antonin Holy<sup>3</sup> and John A. Montgomery<sup>4</sup>

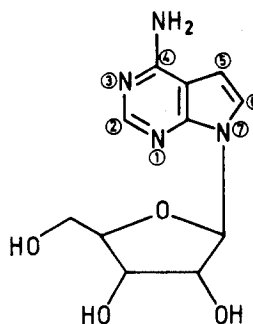

p. 125: In the printed version the lines in the footnote on that page have been mixed up. The correct footnote is reproduced below:

---

\* Strictly speaking the N-7 position of adenosine is equal to the C-5 position of tubercidin (c<sup>7</sup>Ado):

Adenosine

Tubercidin

Thus, substituents at the C-5 position of tubercidin are in the same relative position as N-7 of adenosine because of the difference in the numbering of the purine and pyrrolo[2,3-*d*]pyrimidine ring systems.

p. 133: Reference 32, instead of the volume no. and page nos. read:

J. Med. Chem., in press.
