The invasion has begun... for BBC Model B

Let excitement invade your home computer!
Travel to Alpha Centauri. Enter the Vortex.
Command the ground missiles, or join the
shoot-out at the O.K. Corral!

ATTACK ON ALPHA CENTAURI

For the BBC Micro Model B

... he punched the key, and the control monitor filled with the picture of bug-eyed wasps attacking from their volcanic nest; decisively he dived to the left and his laser gun burst into action...
3D ACTION, EXPLOSIVE SOUND EFFECTS
BBC MODEL B
£7.95 CASSETTE
£11.95 DISK

VORTEX

For the BBC Micro Model B

... there was no escape, he had to enter the Vortex and bet on his skills! He grabbed the manual controls and with determination fired both upper deck guns...
KEYBOARD OR JOYSTICK, EXCELLENT SOUND
BBC MODEL B
£7.95 CASSETTE
£11.95 DISK

3D BOMB ALLEY

For the BBC Micro Model B

... the continued thunder of the hissing ground missiles had long now deafened him - unless he had some of those bombers down, the fleet in the small stretch of water was a sitting duck...
3D ACTION, SOUND EFFECTS, BEAUTIFUL GRAPHICS
BBC MODEL B
£7.95 CASSETTE
£11.95 DISK

GUNSMOKE

For the BBC Model B

...the movement of the saloon-bar door was all the warning he needed! At the speed of light his hand moved toward his holster, while a sixth sense warned him of the upper floor window...
3D ACTION, SOUND EFFECTS, BEAUTIFUL GRAPHICS
BBC MODEL B
£7.95 CASSETTE
£11.95 DISK

Available from WH Smith, HMV, all Spectrum shops and over 500 retail outlets in the U.K.

Do you write your own programmes? If you have an unusual programme which can meet our standards you could be earning more than £250 per week. Why not take advantage of our sought after reputation. Write now!

Outstanding efforts

CHOOSING the best 20 listings from the many which readers sent for this issue of *Acorn Programs* has not been an easy task. Your efforts have produced some outstanding results and therefore we are publishing the first of what we hope will be many Star Programs, worth a double fee of £30 to the author. Our Star Program for this issue is *Ghost Hunter*, a chilling and professionally-designed game by Paul Williams of Bury, Lancs — page 30.

We have also, once again, expanded the editorial content to provide all the software and programming advice you need. Besides our usual three pages of software reviews, there is an in-depth appraisal of the latest releases from Acornsoft and more advice on your programming queries from our Hotline expert. Bruce Smith has read some new books and Jeremy Richards goes back to basics in the start of a series on programming your BBC or Electron.

We still need your programs, so keep sending them — on disc or cassette with a brief explanation of what each one does and for which machine it is intended. Obviously we cannot print all the work you send and we will return any cassettes we do not plan to use, provided they are accompanied by a SAE.

As usual, all our listings have been made from working copies of the programs and all will run on the BBC B, even if written for the Electron.

"THE BEST AND FASTEST SERVICE ON THE SOFTWARE MARKET"

(B. Strasser, Jordan)

CONFUSED by the growing choice of BBC programs? We can help. We've played hundreds to choose the best (like the ones on this page.) Details in our catalogue - free with your order. It's the only catalogue to give details of the best, omit the rest and quote all the reviews. All programs work with keyboard control or joystick as shown. All programs FOR 32K BBC.

WE TRY TO SEND YOUR PROGRAMS THE SAME DAY WE GET YOUR ORDER. Access/Visa card holders phone 01-789 8546, 24hrs, from any country where your own laws allow this. All games in stock - and tested by us - BEFORE we advertise them! Try us and see ...

Of course, we have the classics like THE HOBBIT (text only) £14.95 and PIMANIA (win £6,000!) £10.00 and the 747 FLIGHT SIMULATOR ("the best") £8.95. But we also have, among others ...

SPITFIRE A new flight simulator with two differences: first, the controls are different because the plane is old; second, you can learn aerobatics - not just flying! Your instrument panel is copied from the Mark XIV Spitfire. 20 control keys and the cursors for your joystick. Clear, big instruments. Learn turning, banking, stalling, spinning, looping - and landing before the fuel runs out. Very convincing engine noise varies with your engine speed! Needs skill and concentration. NO STIX. (Alligata) £7.95

BLAGGER Brand-new 20 SCREEN fully animated graphic game. (It's quite a lot like M*N*C M*N*R, actually.) Beautiful graphics, the screen is alive with movement as you try to collect keys to the safes. Each of the 20 screens is a different puzzle, with a different solution. Will your burglar make it? You'll certainly make him try for weeks! NO STIX. (Alligata) £7.95

PETTIGREW'S DIARY Intriguing new 3-part graphic + text adventure. Each chapter loads separately and you must finish each to reach the next! Can you unravel the secrets of the diary in the **Burning Farmhouse** (what must you rescue? How?) in **London Frolics** (realtime text adventure; collect information, not objects) and in **European Trek** (8 separate challenges!). The most challenging adventure we've met recently - and varied enough to keep you interested. NO STIX. (Shards) £7.95

GORF For children of all ages, the bargain of the year! Four arcade games linked together on one tape for one price! - and with very pretty, fast-moving graphics (+ Hall of Fame). Fight your way through SPACE INVADERS, LASER ATTACK, FIREBIRD and MOTHERSHIP. It's very hard to get bored - or to remember the right technique for each game! STIX OK. (Dr SOFT) £7.95

FORTRESS Too new for reviews, this 'ZAXXON' -type game works beautifully on your Beeb. As Pace say ... the Fortress awaits you. It is a classic computer game, in a smashing 3D graphic form. All the features you would expect, plus a Hall of Fame. Fast and furious. STIX OK. (Pace) £8.95

POOL A very realistic simulation in this game for two players. (With very good Scott Joplin music, too!) You can play solo to perfect your technique. Excellent and smooth hi-res colour graphics make the full-screen table a pleasure to play on. You control the cue angle and strength of shot and can get it down to a fine art. Choose the frames to play, too. Great display: very satisfying program. NO STIX. (Dynabyte) £7.95

LORDS OF TIME "Some of the most intriguing puzzles I've come across ... not to be missed". (Home CompWkly) "Executed with wonderful style ... highly recommended". (PopCompWkly) In this text-puzzle adventure you must collect 9 objects, each marked with an hourglass, from different timezones - from the Ice Age to the Space Age. 200+ locations, 750 messages, 80 objects, vocabulary over 200 words. Beautifully written and more sophisticated than ever. NO STIX (Level 9) £9.90

PINBALL ARCADE "As professional a piece of software as you are likely to find ... the graphics are exceptionally good" (C&V Games) **DESIGN YOUR OWN PINBALL TABLES!** One example is included, but the fun is designing, playing and saving your own. You can add or take away or move 38 different features - springs, wires, flashing lights, bumpers. Alter their scores, their bounce. Alter the flippers, even tilt the table. Change just about everything, quickly and easily. Then play with the results. Be your own Pinball Wizard. NO STIX. (Kansas) £9.90

BIRDIE BARRAGE "Very little to fault ... well-presented, and as accurate as you're going to get". (PersCompNews) The best golf game we've seen for the Beeb. Acorn Park Golf Course has 18 holes, 72 par. You have a full bag of clubs and full screen graphics to play with. Set direction and power of each shot very accurately - and watch your ball in flight. Special detailed display when you reach the green. Wind strength, direction, changes between holes. NO STIX. (Computasolve) £7.95

TWIN KINGDOM VALLEY "Sure to become a classic ... an involved and difficult adventure ... the excellent graphics add to the enjoyment" (MicroAdventurer) Not only a great adventure, but all 175 locations are drawn in hi-res graphics - and some of the beautiful drawings contain clues. 36 commands: realtime adventure with 6 control options. Rapidly becoming OUR BEST-SELLER! NO STIX. (Bug-Byte) £9.50

CYLON ATTACK "Stands head and shoulders above the rest" (Acorn User) "Excellent ... the standard by which other games will be judged" (Micro User). "A superb program with excellent graphics" (CompChoice) You will really believe you are launching from and docking with a mother ship: you will see and feel you are refuelling: you will know exactly when you can kill the enemy. UNIQUE 50-PLACE HI-SCORE TABLE CAN BE SAVED. Great. And 3D, of course. STIX OK. (A & F) £7.90

TRENCH "It's very hard even at skill level one ... a challenge to your skills". (A&B Comp) "Manna from heaven" (PersCompNews). One of the most exciting games we've ever played. Fly your Beeb X-wing Fighter down the 3D Trench towards the Death Star-style target, dodging the tie-fighters as they attack. 9 skill levels: sensational graphics: one of our best sellers. STIX OK. (Virgin) £7.95

Acorn in business with the ZX-80 processor

ACORN is bidding strongly for the small business market with the launch of its long-promised Z-80 second processor. The £299 expansion unit upgrades the BBC micro into a full CP/M-based business system and is accompanied by a range of applications programs.

"Our dual processor design offers a speed and performance better than most conventional business systems," claims Acorn marketing manager Tom Hohenberg.

The Z-80 second processor comprises a 'C' chip running at 6MHz and 64K of RAM. It uses the BBC Tube interface to exchange data at high speed with the existing 6503

processor. The dual operation has the Z-80 handling the application program while the host BBC micro concentrates on input/output, screen graphics and system routines.

The free software supplied to the buyer with the expansion unit includes the GSX-80 graphics system compatible with all the

CP/M family of operating systems; a disc-based word processor; a filing system and mailing facility; a spreadsheet program; and an integrated accounting system.

Acorn says demand for the new system is high and that it is working towards the end of a large backlog of orders received before the processor was launched.

Acorn managing director Chris Curry, centre, looks on while Formula 3 driver David Hunt prepares to take P Bushby of March, Cambridgeshire, round the track at an Acorn-sponsored European Raceday at Silverstone. The ride was part of Bushby's prize for winning a cartoon-captioning competition in the *Daily Express*.

Micros at two major shows

ROBOTICS, education and a users' clinic will be among the highlights of the second official Acorn User Exhibition at London's Olympia from August 16-19.

The exhibition will be open from 10am to 8pm each day. Tickets cost £3 for adults, £2 for children under 16. There is £1 reduction for tickets ordered in advance from the organisers, Computer Marketplace (Exhibitions) Ltd, 20 Orange Street, London WC2H 7ED.

High Technology and Computers in Education is the theme of another major exhibition, organised by the same company, to be held at London's Barbican Centre from January 24-26, 1985. Exhibits will include computer hardware and software, as well as robotics, lasers, video and teaching aids. Teachers, lecturers and local government officials from all over the country will be invited to the show.

Award for innovation

ACORN COMPUTERS won the Queen's Award for Technological Achievement for its BBC micro.

The Award pays special tribute to the advanced design and commends Acorn for "the development of a microcomputer system with many innovative features." Chris Curry, managing director of Acorn Computers, comments:

"We have aimed consistently to design computers which have set technological standards instead of merely meeting a price. Our approach is vindicated both by the Award and by the fact that two years since it was launched, the BBC micro is still the most advanced computer of its kind."

The Award helps Acorn to refute criticisms from such as Sir Clive Sinclair, who has threatened to supplant the BBC micro in education with his own QL, and those who say that the design of the BBC is now out-moded.

The BBC still vastly outnumbered other computers in schools.

First add-on for Electron

ELECTRON owners can now run printers, joysticks and software cartridges from their machines with the Plus-1, one of a recent spate of add-ons from Acorn.

Selling at £59.90, the Plus-1 adds a Centronics-compatible printer interface, a joystick analogue port and two slots for ROM cartridge software.

Six new cartridges have already been released by Acornsoft for the Electron Plus-1 system, including **Snapper, Starship Command, Hopper** and the artificial intelligence programming language Lisp. Cartridges cost £14.95, except for Lisp, which retails at £39.95.

"We expect demand for the unit to be good and we are manufacturing it in large quantities," says an Acorn

spokesman. Acorn has also announced an interface which links the BBC micro to the viewdata services run by British Telecom.

The £113.85 adaptor links into the telephone network and allows users to access the business and consumer information published by Prestel and to use the Micronet 800

tele-software service. They can also send and receive electronic mail via Telecom Gold.

The adaptor is available by mail order only from Vector Marketing, London Road, Dennington Estate, Wellingborough, Northamptonshire NN8 2RL.

Expanding the possibilities of the BBC and Electron

Jeremy Richards discusses your latest hints and queries

HOTLINE last month inspired many of you to write about your Acorn machines. A number of queries concerned the use of the operating system calls, the various expansion ports of the BBC and options for the Electron.

The operating system of both the BBC and the Electron is the most sophisticated among home computers and many aids have been included to help the programmer. The subject which raises many queries, and also hints, is the use of *FX commands. FX calls are a means of enabling the user to control a range of effects in the computer without resorting to complicated assembler language routines.

C Johnson of Leicester sent a tip for turning-off the sound of Acorn machines, something which can be useful when the arcade games are keeping the rest of the family awake at night. Unfortunately the tip is slightly incorrect, due, I am sure, to a typing error. Johnson suggests using *FX201,3 to disable the sound output. *FX201,3 disables the keyboard, meaning that the machine will not respond to any key on the keyboard except the break key. To re-enable the keyboard the break key has to be pressed.

The command to turn off sound is *FX210,1. Any number greater than 0 will turn off the sound. To re-enable sound, either press the break key or type *FX210,0. Therefore if you are running software which utilises the sound capabilities of the BBC and Electron, typing the *FX command will stop any sound effects. That should work in most cases unless the software uses in the program initialisation *FX210,0 to enable sound.

I have been asked about expansion options for the Electron. As you have probably seen advertised, there are now a few expansion units for the Elk and Acorn is releasing its first add-on, the Plus-1. The expansion box connects to the Electron via the edge connector on the rear of the machine. It contains a parallel printer port and a joystick interface. To complete the unit two ROM

cartridge sockets enable the user to buy software in cartridge form.

The advantage of cartridge software is that by plugging-in a program is available in much less loading time but the cost is likely to be greater than that of tape software.

While on the subject of expansion options, another source of mystery to some is the RS423 port at the back of the BBC. It seems not everyone is acquainted with it and what it does. The RS423 is a serial interface and can have a variety of uses. The most common are controlling serial printers and communicating with other machines.

In the case of the latter a prime example is accessing telecommunications systems such as Prestel or British Telecom Gold. By connecting either an acoustic coupler or modem to the RS423 port, the BBC can then communicate with mainframe computers, by a telephone line, to send and receive information. That leads neatly to the other form of communications device, the teletext adaptor. Those who already have a teletext receiver on a television set and would like to use it in conjunction with a BBC cannot do so without

connections are not available, although that is not to say that such devices may never be added.

Users of the Electron or BBC often want to carry out a function or command as quickly as possible. An excellent means of doing it is to re-define one of the user-definable keys. They are labelled f0, f1 and so on and on the BBC the first 10 are shown as red keys on the keyboard. I find it useful when programming or typing-in other people's programs to have some function keys set up to carry out the same set of commands at the press of one key. To do that we use the *KEY command and program one gives an example of its use.

Program 1.

```
10 *KEY 0 NEW: M
10 *KEY 1 *EXEC"
30 *KEY 2 RUN: M
20 *KEY 3 OLD: M
50 *KEY 4 LOAD"
60 *KEY 5 CHAIN"
70 *KEY 6 LIST: M
80 *CAT: M
90 *KEY 8 *WORD: M
100 *KEY 9 *BASIC: M
110 *KEY 10 OLD: M LIST: M
```

In a line where you wish a RETURN to be issued, i.e., where you have typed

'The advantage is that a program is available in much less time'

the adaptor for the computer. What would be the advantage of buying a teletext adaptor? If you already own a teletext set, you would be able to receive the free software transmitted by the BBC on pages 700 onwards.

The teletext system uses another of the external ports of the BBC, the 1MHz bus. It is similar in nature to the user port except it is far more versatile for more complex hardware add-ons.

Why can those devices not be added on to the Electron? In the case of the Elk, Mode 7, which is the teletext display screen, is missing. Therefore there is no correct display available for teletext pages. Second, the peripheral

*BASIC and wish the command to be carried out, a control code has to be issued, in this case control-M, which would be the same as pressing the RETURN key. To do that we use the character above the '/' key which, if you are using Mode 7, shows as two vertical lines, but on the key or in other modes as a single broken vertical bar.

More than one function can be assigned to a key and in that way a set of commands can be carried out in one attempt. It is also possible to use a colon (:) to separate statements as in Basic multi-statement lines, but bear in mind that it will not be understood as a multi-

Continued on page 8

statement line, as the command is being carried out by the operating system and not Basic. Therefore if using operating system commands like *KEY, it is best to have them on their own on a line, or as the last statement on a Basic line, as control is passed to the operating system for the rest of a line once an asterisk is encountered.

Let us look at a routine which can be incorporated in your programs. This utility is meant for disc users; it would work for tape as well, though it would be very slow. The routine is to provide a menu selection of your programs and permits you to press just one key to load and run a program. Type-in program two and save it to disc with the title !MENU.

Program 2.

```

10 CLS
20 PRINT TAB (10,0);"GAMES DISC 1"
30 PRINT TAB (0,4);"1...PROGA"
40 PRINT TAB (0,6);"2...FROGGER"
50 PRINT TAB (0,8);"3...BINGO"
60 PRINT TAB (0,14);"Enter number of choice"
70 A$=GET$
80 A=VAL(A$)
90 IF A<1 OR A>3 THEN 70
100 ON A GOTO 110,120,130
110 CHAIN"PROGA"
120 *RUN FROGGER
130 CHAIN"BINGO"

```

Once saved to disc, use *BUILD to make a !BOOT file, typing-in at line 1 CHAIN"!MENU" and then press

RETURN. At line 2 press the escape key and a file !BOOT should have been created. Then type *OPT 4,3 to set the *EXEC option. The menu program will then be run every time Shift-Break is pressed—that is done by pressing and holding the Shift key while pressing and releasing the Break key.

To explain how to customise the program to run programs on your disc

let us look at the listing in detail. Line 10 clears the screen. You might like to replace it with a Mode statement and include colour in the titles. I favour Mode 7 and make use of the double-height characters using 'CHR\$141'. Line 20 is the title of the disc and lines 30 to 50 show the names of the programs on the disc. The lines shown are only examples and you must enter as many as are appropriate for the number

of programs contained on your disc. Line 60 tells the user to enter his choice.

Lines 70-100 are the real heart of the program and are responsible for reading the user's input and carrying it out if correct. The key pressed by the user is read in at line 70 and is converted into a numeric variable at line 80. Line 90 is set to the minimum and maximum number of programs to be chosen and if the number or key pressed is outside the number of programs displayed, the user is returned to line 70 until an appropriate key is pressed.

The 'ON' statement in line 100 then sends the program to the correct line for execution. Therefore if the number pressed was '1' the program goes to line 110, where a 'CHAIN' command to load that program is carried out; if '2', then to line 120 and so on.

When adding new programs to your menu, besides altering the screen display, lines 90 and 100 should be altered as well to take account of a new number of programs. Finally the correct command for loading and running must be used in the final section.

The program is simple to use and makes it easy to add new programs to the list. It is the fastest program I can show but there are many other ways of creating menus and if you have a better routine, please send it to us.

Beginners' path through the literary jungle

Bruce Smith takes a critical look at some recent publications

WITHOUT doubt the publishing industry was given a big lift when the home computer and, in particular, the Acorn micros, made their appearances. A walk into any bookshop illustrates the point with row after row of books on your favourite micro. Choosing a book to supplement the User Guide which can look daunting to many first-time users can be a difficult task. To help you wade through this literary jungle I have been burning the midnight oil reading a selection of books available for the BBC and Electron on the subject of programming.

The name R A Penfold will be familiar to readers of the electronic computing press. Penfold has teamed up with J W Penfold to produce two introductory pocket books for the BBC and Electron. *An Introduction to Programming the BBC Model B Micro* is a well-written introduction. A shortcoming is that it assumes you have already mastered your keyboard, as no details on obtaining shifted characters or using the function keys are given. Another immediate minus is the omission of an index, though the well thought-out layout of

formatting and getting information into the BBC while a program is running using the GET, INPUT and INKEY commands. Procedures and functions, facilities which set the Acorn machines apart from their contemporaries, are explained with clear, pithy examples in chapter four and the reader is left in no doubt as to their usefulness. Sound, graphics and sprites are covered in the ensuing chapters, along with an examination of the binary and hexadecimal numbering systems; again, example programs point the way.

The Penfolds' bent for interfacing makes an appearance in chapter 10. Although interesting reading, I feel it is a little out of the depth of the introductory reader. Curiously the last chapter is dedicated to the Teletext Mode 7. I would have thought that should have occurred somewhat earlier as it is undoubtedly the operating mode the reader will be using most. Overall a good book and at £1.95 a very worthwhile buy.

An Introduction to Programming the Acorn Electron, also by Penfold and Penfold, not surprisingly follows the same track as the former title. In fact,

Course. Both plastic-cased volumes have an accompanying cassette containing the main programs from the book.

My first impression was that they are somewhat congested; that is probably because they are computer-set, which produces a heavy compact type. Also, many of the illustrations are of the hand-drawn type, which looks a little unprofessional and cheap, though at £14.95 neither volume can be considered inexpensive.

BBC Basic Programming Course starts with an overview of the keyboard and gets the user generally playing around typing-in silly little commands. Not that I am decrying that; on the contrary, I think it is a very useful exercise and gets the reader used to the keyboard and over initial computer nerves. The final part of the chapter has the reader using the cassette to save and load items, an aspect often overlooked by other introductory books.

Chapters two and three deal with number and string handling in a rather disjointed manner, with perhaps too much mathematical bias for an introductory book. Surely also the REPEAT...UNTIL loop is worth more than a page and a half of coverage.

The game of Hangman is used to provide the basis of introducing DATA, READ, graphics and colour in chapter four—a pleasant approach all drawn together at the end by a suitable program. Chapter five takes a similar tack, using a bat 'n ball version of squash to introduce several other graphical features of the BBC plus an insight into animation.

The final chapter is titled Diamonds of Time and again uses various games programs to examine other aspects such as FN and TIME. That chapter is somewhat disjointed and left me wondering what it was all about. Thirteen appendices are tacked on to the end of the text giving the usual details of ASCII codes, keywords and *FX calls, though the latter are scarcely mentioned in the text.

The accompanying cassette contains

Continued on page 10

'A shortcoming is that it assumes you have already mastered your keyboard'

each chapter should enable first-time users find their way around quickly.

Unusually the book starts with a description of variables and arrays. Many of the more erudite books tend to leave that aspect of programming to several chapters later, even though they have been using both in demonstration programs from page one.

After all, one of the main uses of a computer in the home is to store information, whether it be household accounts or the carry-over to the next adventure game session. The chapter explains the differences between variable types and the demonstration programs are short and concise.

Chapters two and three discuss print

only the last two chapters differ. Chapter 10 on interfacing provides useful details on adding 8-bit input and output ports to the Electron, though once again it is an odd inclusion in an introductory book. Due to the lack of a teletext display on the Electron, chapter 11 details the handling of data files, giving a telephone directory program as an example.

All my comments on the BBC version hold true and again at £1.95 it is an absolute snip.

At the other end of the price range for introductory programming books are two Dr Watson series volumes by Alan Marshfield titled *BBC Basic Programming Course* and *BBC Advanced Basic*

Continued from page 9

eight of the longer program listings. Although it is pleasant to load rather than type them in, I wonder how many people would buy the cassette if it were sold separately.

The book is really a mixed bunch of pages offering good and bad. I would certainly advise any prospective buyers to give it a good perusal in the shop before purchase.

The *BBC Advanced Basic Course* follows from the previous volume, so much so that it starts with chapter seven. That chapter details the implementation of bar charts and integer numbers. It also introduces the ASC and CHR* functions, elementary items which should have been dealt with in the first volume.

The games approach is taken up again in the next chapter with the development of a space game, although being an advocate of structured programming I am always wary of programs which contain even one GOTO statement, particularly within procedures. Chapter nine provides a useful entry to the world of computer sound and at long last introduces the excellent function keys. Once again the final chapter is a mish-mash of items based on data handling and chunky graphics. Finally, 13 appendices—yes, the same ones—end

Clive Prigmore Beginners' BASIC

A teach-yourself course in writing computer programs

the book. The accompanying cassette holds 15 programs from the book.

I would not recommend the book to someone wishing to learn advanced Basic programming techniques. There are numerous omissions, no details on sorting techniques, and the layout does not encourage bed-time reading.

Clive Prigmore's *Beginner's Basic* is a general book on programming not written specifically for the BBC or Electron but written with them and the other popular home micros in mind. Even so, this large A4-sized spiral-bound book deserves mention. It deals with all the main introductory areas simply, clearly

and with short programming examples. Chapter topics include writing your own programs, decisions, strings, loops and lists, sorting, searching, and files and menus.

One of the biggest points in the book's favour is its excellent production. It really is a pleasure to look at and the lucid writing puts across all the author's points.

There are inevitable weaknesses in a book of this kind. For example, the book details the RANDOMIZE function which does not exist in BBC Basic. Many of the specialised BBC keywords are also missing—there is no mention of PROCs. At £9.95 it is a worthwhile investment, though it should be supplemented with a BBC or Electron-specific book.

An Introduction to Programming the BBC Model B Micro, by R A & J W Penfold, 134 pages, £1.95, published by Bernard Babani.

An Introduction to Programming the Acorn Electron, by R A & J W Penfold, 134 pages, £1.95, published by Bernard Babani.

BBC/ELECTRON PROFESSIONAL SOFTWARE

Our educational software is used in thousands of schools and homes throughout Great Britain.

EDUCATIONAL 1

BBC/ELECTRON

Tape £8.00 Disc £10.00

Hours of fun and learning for children aged five to nine years. Animated graphics will encourage children to enjoy counting, maths, spelling, and telling the time. The tape includes six programs: MATH1, MATH2, CUBECOUNT, SHAPES, SPELL and CLOCK.

... An excellent mixture of games' ... Personal Software - Autumn 1983.

EDUCATIONAL 2

BBC/ELECTRON

Tape £8.00 Disc £10.00

Although similar to Educational 1 this tape is more advanced and aimed at seven to 12 year olds. The tape includes MATH1, MATH2, AREA, MEMORY, CUBECOUNT and SPELL.

FUN WITH NUMBERS

BBC/ELECTRON

Tape £8.00 Disc £10.00

These programs will teach and test basic counting, addition and subtraction to four to seven year olds. The tape includes COUNTING, ADDING and an arcade type game to exercise addition and subtraction. With sound and visual effects.

FUN WITH WORDS

BBC/ELECTRON

Tape £8.00 Disc £10.00

Start your fun with alphabet puzzle, continue your play with VOWELS, learn the difference between THERE and THEIR, have games with SUFFIXES and reward yourself with a game of HANGMAN.

... 'Very good indeed' ... A&B Computing - Jan/Feb 1984.

JIGSAW AND SLIDING PUZZLES

BBC/ELECTRON

Tape £7.95 Disc £9.95

There are two jigsaw and four sliding puzzles on a 3x3 and 4x4 grid. Each program starts off at an easy level to ensure initial success but gradually becomes harder. It helps children to develop spatial imagination and in solving problems. The tape includes: OBLONG, JIGSAW, HOUSE, NUMBERS, CLOWN and LETTERS!

GAMES & UTILITIES

GAMES OF LOGIC

BBC

Tape £4.95 Disc £6.95

For children and adults alike. The tape includes AUCTION, FLIP, REVERSE, TELEPATHY and HEXA 15.

... 'This package is good value' ... Acorn User - Nov 1983.

SUPERLIFE

BBC/ELECTRON

Tape £4.95 Disc £6.95

Fast (machine code) version of a popular 'GAME OF LIFE' in a large universe.

KATAKOMBS

BBC

Tape £5.95 Disc £7.95

The ultimate adventure game.

UTILITIES

BBC/ELECTRON

Tape £5.95 Disc £7.95

An assortment of useful procedures and functions which can save you hours/days of programming effort: date conversion, input and validation routine, graphic routines, sort, search and many more.

★ ★ ★ SPECIAL OFFER ★ ★ ★ Buy three titles and deduct £4.00

Killer ape retains most of its power

KILLER GORILLA from Program Power — or Micro Power as the company is now called — has long figured prominently in the popularity charts for BBC games. Now a new version has been produced for the Electron and the transition has been achieved very smoothly.

In the best Donkey Kong tradition, the aim is to manoeuvre the hero along a series of platforms and up ladders towards a helpless maiden held captive at the top by a fearsome primate. In defence of his prize, the gorilla hurls down barrels towards the rescuer who can, for a short time, smash them with an axe he has had the good

fortune to pluck from thin air; when the axe vanishes, he is reduced to leaping over the barrels as best he can.

Practice will reveal tactical ways in which a player's score can be improved. Trying to leap over a series of barrels rolling close together is not a good idea and standing below the edge of a plat-

form may mean being squashed flat from above. Completing one screen leads to another more difficult one, with useful objects to be picked up along the way and large gaps in the platforms creating additional dangers. A touching scene rewards you if you whisk the heroine from the gorilla's clutches.

Within the limitations imposed by the slightly less sophisticated graphics and sound of the Electron, the game still has all the attractions which have endeared it to BBC owners. A catchy tune, which mercifully can be silenced at the touch of a key, accompanies the action and the excellent graphics have plenty of humorous detail, including the way in which the hero spins on the spot and finally keels over with his legs in the air whenever he moves into the path of a barrel.

Killer Gorilla should receive a warm welcome from Electron owners who will be well served if more software for the machine reaches this high standard. The game is produced by Micro Power, 8-8a Regent Street, Chapel Allerton, Leeds LS7 4PE. It costs £7.95.

Return of the insect train

YET ANOTHER Electron game which goes back to early arcade classics for its roots is **Centipede** from Superior Software. The object is to prevent the snake-like centipede from reaching the bottom of the screen by firing at it from a laser base. Various insects which detach themselves from the train can be zapped for different scores according to their type.

The scenario will no doubt seem familiar to old hands but for those not in search of originality **Centipede** is entertaining enough, with an attractive screen display and a choice of skill levels to add extra challenge. A cassette insert with no explanations is uninviting but instructions are provided on-screen.

Centipede is produced by Superior Software, Regent House, Skinner Lane, Leeds LS7 1AX and costs £7.95.

Competent invaders

THE IDEA that no software library is complete without some version of **Space Invaders** no doubt lies behind the Micro Power decision to produce **Electron Invaders**. Despite the lack of originality, it must be said that it is a competent version and anyone wanting to play space invaders on the Electron might just as well buy this game as any other.

In the classic manner, it features a variety of alien hordes, each of which earns the player a different number of points when zapped. The player moves a laser back and forth along the baseline and can shelter behind defensive bunkers; beware of exploding bombs which produce a spectacular and potentially dangerous shower of shrapnel.

Clearing one screen leads to another in which the invaders start their offensive lower down the screen. One or two people can play and compete for high scores and the game includes a useful silence facility for those who tire of the piercing sound.

Electron Invaders is available from Micro Power, 8-8a Regent Street, Chapel Allerton, Leeds LS7 4PE and costs £7.95.

Quick on the thaw

PENGUINS attempting to shunt ice blocks into place seem to be a popular theme of a recent batch of micro games. **Pengwyn**, produced on a two-sided tape for the BBC and the Electron, has a number of by now familiar features but has managed to combine them in a reasonably lively and entertaining way.

The object is to manoeuvre randomly placed flashing squares into a straight line, either by melting the ice blocks surrounding them or by pushing them into an empty space if one is available. Three penguins repre-

sent the player's three lives and their task is complicated by the monsters — fluffy and beaming but monsters nonetheless — which materialise from the ice blocks and pursue the hard-pressed birds. They can defend themselves either by running away or by pushing an ice block into the monster's path.

Besides skill in moving the penguin quickly round the screen, the game requires quick decisions on the best course of action when confronted with an ice block or a monster. To make things even more exciting, the play-

er's score is calculated on the basis of the time taken to organise a straight line; the number of monsters also increases steadily.

It is a pity that Postern has not bothered to mark the tape on each side with the computer for which it is intended and that the screen instructions are lacking in any punctuation, but in other respects the company has produced an above-average game.

Postern is at PO Box 2, Andoversford, Cheltenham, Glos GL54 5SW and the game costs £6.95.

More reviews on page 12.

Effective two-fold attack

EXCELLENT line graphics add conviction to **3-D Tankzone** for the BBC B.

As supreme commander of a fortified hilltop command post your job is to scan the surrounding terrain and the horizon for enemy tanks and aircraft. To defend yourself against them, you have an anti-aircraft cannon and an anti-tank missile launcher; you can choose to play the game with either type of weapon or a combination of both. You fire at enemy aircraft by lining them up in your sights and you aim at tanks by moving indicators at the top and sides of the screen.

Although basically a simple zapping game, **3-D Tankzone** has been carefully produced and provides some fine effects. The rotation of the command post and the movement of the tanks in particular are realistically conveyed.

The only real criticism of the game is that the action is a trifle slow.

3-D Tankzone is produced by Dynabyte Software, 31 Topcliffe Mews, Wide Lane, Morley, Leeds LS27 8UL and costs £8.95.

Football game is a resounding win

FOOTBALL MANAGER from Addictive Software should send soccer fans 'over the moon' but the game scores highly with non-enthusiasts, too.

As manager of your favourite team, it is your job to decide each week who will play in the next match on the fixture list, whether to buy or sell players, and whether to borrow money or repay a loan according to the club's financial fortunes.

Whichever team you choose, you start in division four. By the end of 22 League matches, you hope to be promoted to division one and possibly win the FA Cup as well. If the team closest to your heart is not available, the game allows you to customise the data file to include your own team and players.

Among the many other options offered are seven skill

levels ranging from beginner to genius. If you start as a beginner and do well, your rating is adjusted automatically at the end of the season. The most crucial decision affecting your team's performance, however, involves the selection of players and it is based on the attributes of the two opposing teams. Their energy, morale, defence and attacking strength are valued on a scale of points, and players are chosen according to positional skills and energy they can bring to the team. True to life, players' energy is depleted after a game and restored after a rest.

Having settled all the details, you can then sit back and watch the game — a short, animated sequence showing the 'highlights'. Scores, injuries and new league placings are all displayed at the end.

The combination of graphic action and informed decision-making distinguishes **Football Manager** from many other strategy games and the scope and careful presentation of the program make it entertaining and absorbing. It is produced by Addictive Games, 7A Richmond Hill, Bournemouth H2 6HE and costs £7.95.

Submerged twist

THE SIMPLE arcade theme of shooting the enemy before they shoot you is given a slight twist by **Sea Lord** for the BBC B. Your minisubmarine is cruising through a rocky seascape when the local sea lord decides that you are trespassing and sends a fleet of scout ships to destroy you.

Using left and right rotation keys to turn and face your pursuers, you must try to blast them out of the way before they collide with you and deprive you of one of

your three lives. Having eliminated the scouts, you are then harrassed by submarines and yet more deadly vessels if you manage to get rid of those. A score of 1,500 points earns you an extra mini-sub with which to continue your battle.

The graphics are far from sophisticated, with wavy blue lines and a few cubes representing the sea and rocks, and the action cannot be described as hair-raising, but the movement of the submarine and the firing action lift the game somewhat out of the ordinary. The novelty can provide even jaded players with some entertainment.

Sea Lord is produced by Bug-Byte, Mulberry House, Canning Place, Liverpool L1 8JB. It costs £7.50.

Trap ensnares player

FRENZY for the BBC B shows that sophisticated graphics are not the prime ingredient of an enjoyable game, although a little more effort on the pictorial front would certainly not have done any harm.

A small square represents the robot craft with which the player must try to trap a train of dots standing in for deadly atomic particles running free in a scientific research centre. As the Leptons cross the screen and bounce off the walls, you attempt gradually to enclose areas of the screen within your ion trail, causing

them to change colour.

When Leptons are trapped in a coloured area or when more than 95 percent of the screen has been filled in they are immobilised, but if they crash into the robot craft or its ion trail before you have returned to base, you lose your life and possibly the game.

If you succeed on one screen, life becomes more complicated as Chasers move along the outer borders, threatening to collide with the robot craft.

Although the concept and graphics are extremely sim-

ple, **Frenzy** is a surprisingly addictive game in which timing and a shrewd eye for angles are needed for success. Interest is added not only by the increasing difficulty of the game but by the fact that scoring is affected by whether you choose to drive your craft slowly, earning a higher score but more dangerous, or fast, and by the tactical decisions you can make to improve your chances.

Frenzy is one of a new batch of releases from Micro Power, Northwood House, North Street, Leeds LS7 2AA and costs £7.95.

Just a question of general knowledge

THE VALUE of general knowledge quizzes as an educational tool may be debatable but Kosmos Software has devised an entertaining and thoughtfully designed learning game in its **Answer Back Senior Quiz**.

Aimed at children aged 12 and over, the tape provides a series of 15 quizzes on subjects ranging from astronomy and music to sport, literature and mythology. They are combined with amusing graphics and a simple zapping game. Questions are

flashed on to the screen by a laser-wielding robot and whenever they are answered correctly the student is offered the option of firing at an alien craft.

Intended as a spur to encourage children to supply the correct answers, the zapping exercise probably acts more as a distraction, drawing the attention from the answer displayed on the screen. In other respects, however, the quiz is effective in helping to memorise answers and provides an excel-

lent grounding for would-be Mastermind contenders, if nothing else.

After the introductory section has appeared on the screen, each individual quiz must be loaded separately, a laborious process if a topic which is low on the list is requested. A quiz consists of 50 questions and at the start you are offered a choice of how many you want to answer, whether you want them in a multiple choice, yes/no or fill-in-the-missing-letters format, and whether you want to be timed. Such choices make it possible to repeat each quiz more than once, varying the format.

More valuable still, the authors have allowed for teachers or parents to modify existing quizzes or create new ones of their own, so that the quiz can also be used to drill pupils on what has already been taught in class.

Answer Back Senior Quiz is produced by Kosmos Software, 1 Pilgrims Close, Harlington, Dunstable, Beds LU5 6LX and costs £10.95.

Screwball bounces into favour

SCREWBALL for the BBC B belongs to a group of games which are popular at present and all trace their origins to Atari's Q*bert. The lack of originality can be forgiven because MRM Software has managed to make this a particularly entertaining version.

Assuming the guise of what looks like an animated corkscrew, you have 60 seconds to change the colour of a diagonal grid of squares by jumping on each one in turn. As you dash about the screen you are pursued by black bugs which are liable to materialise on top of you and eliminate one of your lives. You can, however, defend yourself against them by spinning quickly on the spot and drilling a hole through which, with a little luck, the bugs will fall, earning you a bonus score.

Sensible placing of the control keys is one asset of the game. Amusing and realistic 3-D graphics and fast action should also help to keep you playing **Screwball** for some time. Available from MRM Software, 17 Cross Coates Road, Grimsby, South Humberside, Screwball is good value at £5.70.

Scaling challenge

IF YOU LIKE your arcade games to present a real challenge, you should enjoy **Castle Assault** for the BBC B. The object is to scale the walls of a castle, jumping over monsters, climbing ladders and leaping on to moving platforms to reach a bag of gold at the top. Bonus points are gained by gathering the fruit to be found at either end of each level.

In spite of a generous provision of lives—you start with five men—you will probably not find it an easy mission unless you have had plenty of practice at the keyboard. Jumping over the monsters and on and off the platforms requires accurate timing and on the first screen a flying duck makes life even more hazardous as you reach the upper levels of the castle.

Castle Assault has many elements, from ladders and platforms to flying ducks, which are now familiar features of many computer games but it combines them in a lively and colourful way. Excellent graphics and fast action should keep you playing.

Castle Assault is produced

by MRM Software, 17 Cross Coates Road, Grimsby, South Humberside and costs £5.70.

CHALKSOFT claims that **Word Skill**, released recently as a 40-track disc for the BBC B, improves spelling and deductive skills, enriches the vocabulary, encourages discussion, and more besides. Be that as it may, the program is certainly a well-produced version of an old favourite commonly known as Hangman.

The program is designed for use at home or in the classroom and provides a number of options to suit a variety of situations and pupil skill levels. The game can be played on the basis of familiar phrases, or of ran-

dom sentences thrown up by the computer out of its memory store. Pupils can play against each other or against the computer, they can make up their own phrases for others to guess, they can be timed or not timed.

The game also includes a range of facilities for the benefit of the teacher who can edit and save sets of phrases or, most important, alter the sound level of the game or print-out class scores. The teacher can also retain mastery by using a password to prevent pupils altering the program settings or breaking-out of a game to

return to the main menu, although that no doubt invaluable arrangement can make the game a little cumbersome at times.

Scores are calculated according to the percentage of correct letters placed, with points deducted for any incorrect letters attempted, and players completing phrases in the required time are rewarded with a repertoire of jolly tunes.

A thorough and carefully planned treatment of a simple concept, Wordskill is available from Chalksoft, 37 Willowslea Road, Worcester WR3 7QP and costs £12.25.

Hangman is back

SOFTWARE from Acornsoft has always tended to back the image of the BBC micro as a serious machine on which a little light relief is allowed occasionally in the shape of games displaying the graphics and sound capabilities of the machine. The company has stepped up production recently with a number of releases which only reinforce that tradition.

Most successful of the new Acornsoft games so far appears to have been **Aviator**, whose author Geoffrey Crammond we interviewed in the June/July issue. A feat of complex programming, the game puts the player in the cockpit of a Spitfire, reproducing faithfully every aspect of the performance of the World War Two aircraft. The cassette is accompanied by a detailed instruction booklet and a map, and the chair-bound pilot can practise take-off, landing and even flying through the streets of Acornville or looping the loop.

Although it has only simple black-and-white line graphics, **Aviator** is impressively realistic and provides a challenge which is at the same time entertaining and educational. The combination has taken **Aviator** to the top of the best-selling charts and kept it there for some weeks.

Another strong contender, creeping slowly up the charts behind **Aviator**, is **JCB Digger**, sponsored by J C Bamford Excavators as a promotional exercise. The game features that familiar accessory of any building site, a JCB

Games taken seriously

Nicole Segre finds recent releases from Acornsoft are unoriginal but reliable

driver who is flung from his cabin whenever the Meanies pounce.

Successive waves of increasingly dangerous Meanies are designed to enliven the action of **JCB Digger**. However, the action of **JCB Digger** fails to exert a strong grip, especially if you are playing with keyboard controls rather than a joystick.

Besides using the movement keys to drive the excavator, digging a hole requires pressing the SHIFT key three times, while filling a hole to trap a Meanie is achieved by pressing the space bar and driving back over the hole, both awkward manoeuvres to perform in a hurry. In contrast, the alternative method of scoring, consisting of shovelling away the landscape, is a little too leisurely to provide real excitement.

Less enterprising on the graphics front but more fun to play is **Carousel**, in which a fairly familiar shoot-

single polar bear as it crosses the screen. You then proceed to new and more difficult screens where the animals move faster and the birds swoop more frequently. The action thus ranges from fairly easy at the start to positively frantic at the end, thereby winning the favour of everyone who likes zapping games, from ham-fisted novices to nimble-fingered keyboard experts.

In the same vein of a familiar theme which cannot fail to please is **Crazy Tracer**. The object is to guide your paint roller round the edges of a grid of rectangles. Whenever a rectangle is completed, it changes colour and scores the player points according to the size of the rectangle; rectangles with objects in them such as cherries are worth most points. Hampering you in your efforts to race round the grid are so-called 'monsters' which pursue the roller to squash it. Predicting the path the monsters will take is as vital in succeeding as is dexterity with the control keys.

Although effective enough, the graphics in **Crazy Tracer** are in no way startling and the idea has appeared with slight variations many times elsewhere. Nevertheless, it makes a challenging and addictive game, which has been presented with typical Acornsoft thoroughness and attention to detail.

A slightly more ambitious production is **Free Fall**, which combines interesting and original graphics with unusual and difficult controls. The accompanying booklet of instructions makes somewhat unpleasant reading. A space battleship has been injected with a cyanide-based atmosphere by hostile aliens called Alphoids. Only one crew member has managed to don his space suit in time and must defend himself, and the vital records of the space station, bare-handed against the Alphoids.

Alphoids can be destroyed by kicking, punching, ramming or throwing a bomb at them. The crewman can be killed by fire, explosions or suffocation. The Alphoids take a variety of forms, such as venomous craboids, biting and

'The action thus ranges from fairly easy at the start to positively frantic at the end'

3CX excavator loader, pitted in a battle of wits against a horde of Meanies.

The struggle takes place on an island where the Meanies are trying to capture the digger, which in turn is attempting either to scoop up the Meanies and push them into the sea or to dig holes into which they can fall. Meanwhile, clearing the forests and undergrowth which cover the island provides an additional activity and earns the player extra points.

The great asset of **JCB Digger** is its colourful and lively graphics. As you drive the digger round the island, the screen scrolls in every direction to reveal more features of the island geography and its fringe of white-capped, moving waves. Although the beaming, blob-like Meanies are scarcely terrifying to look at, the digger is an amusingly accurate portrayal, complete with a

ing stall theme has been refined into a lively and addictive game.

A jolly fairground tune accompanies the action, which consists of shooting at revolving pipes and a conveyor belt of owls, ducks and rabbits. To keep you on your toes, you are harassed occasionally by a duck which swoops to steal bullets from your remaining store, displayed at the bottom of the screen.

On the positive side, you can improve your score by aiming at a series of letters interspersed among the animals. If you manage to shoot them in the correct order to spell 'bonus' you gain extra points for each letter hit. You can also replenish your stock of bullets by shooting at boxes at the top corners of the screen, provided they are displaying a positive number.

Clearing the first screen gives you a chance at the jackpot — shooting at a

fire-breathing lobsteroids, and waspoids which can do everything all the other breeds can do and have a deadly sting as well.

Points in the complex game are earned according to the species of Alphoid which has been destroyed and the method used to achieve it. The octagonal space station is shown as stationary but is in fact rotating, and the crewman, propelled by air jets attached to his suit, moves in curves rather than straight lines. The rate of rotation increases as the player's score mounts and the heart-beat of the crewman and the amount of breathable air he has remaining are displayed at the side of the screen.

Jaded computer games players may find the novelty and intricacies of *Free Fall* much to their liking but for the inexperienced player the complexity of the controls may prove too discouraging. There are separate keys to propel the crewman left and right, to move each of his arms and legs, and even to catch and throw a bomb; equivalent functions are provided using a joystick by moving it to different compass points.

Surviving for any length of time, or even keeping the crewman from knocking himself out against the walls of the space station, is a daunting task. Excellent animated graphics, if only in black-and-white lines, add considerably to the interest of this difficult game.

A batch of educational programs from Acornsoft has also made a recent appearance, including a series of language tapes based on the Linkword method developed by Dr Michael

Gruneberg.

More academic in bias, while retaining a strong element of entertainment, is **Chemical Analysis**, one of a series of three chemistry programs for schools. The tape covers three main areas — elements, organic and inorganic — and is aimed at children aged 14 to 17.

In each case, pupils learn or revise by trying to guess at substances, asking the computer a series of questions until the answer becomes clear. In the case of

elements, for example, pupils are given a clue like "It is used in fireworks". They can then choose from a list of questions like "What colour is it?" "How does it react with oxygen?" "Does it conduct electricity?" and so on.

By a process of elimination, they should arrive at the answer — magnesium. They are then asked to supply the symbol for that element and after being shown a score card, can proceed to the next mystery element.

The game can be played on three levels, with a longer and more difficult selection of elements on level three. If they are truly puzzled, pupils can submit by pressing ESCAPE, which makes the computer provide the answer to the last question and proceed to the next. Another helpful feature is that questions which have already been asked change colour. The only slight disadvantage of this absorbing and instructive program is the awkwardness of entering symbols with their mixture of upper- and lower-case letters.

The organic and inorganic sections of the tape follow the same pattern, except that the questions concern tests on the substances and their results. Thoughtfully designed and absorbing, *Chemical Analysis* should prove a useful tool for both teachers and pupils.

Number Chaser, produced for Acornsoft by ASK, which specialises in educational programs, is a curious paradox in that it aims to use the computer to counteract some of the ill-effects produced by calculators. Dependence on calculators, the authors say, means

that many children are unable to do sums in their heads and often cannot judge whether an answer is correct within a few digits.

Number Chaser takes the shape of a race game, in which you can choose your vehicle, from bicycle — easy level — to racing car. The computer flashes a sum at the top of the screen, with four possible answers at the top of each lane. You move your vehicle into the lane with the answer you think is closest to being correct, and if you have chosen correctly you gather speed and get closer to the finishing line. If you are wrong the vehicle behind you gets nearer, eventually crashing into you and ending your race.

Although designed as a colourful and lively game, *Number Chaser* fails to hold the attention for as long as it might, especially in the more difficult section where the number of questions and the length of the race is a little discouraging. Still, a quick bicycle or stock car race might prove a useful exercise for some children, although it is a pity that at least one spelling error crept into the program.

On the whole, however, the latest releases under the Acornsoft banner maintain the company reputation for software which, without making any great claims to originality, is reliable and thoughtfully produced.

Aviator, cassette version £14.95, disc £17.65; **JCB Digger**, **Carousel**, **Free Fall**, **Crazy Tracer**, **Chemical Analysis** and **Number Chaser**, cassette £9.95.

All programs available from Acornsoft, Betjeman House, 104 Hills Road, Cambridge CB2 1LQ.

BBC messages at your command

Jeremy Richards begins a new programming series

THERE must be many who, despite typing-in listings, have not learned all the ins and outs of BBC Basic. I hope to take you from first principles, through all the Basic commands to the more complex programming of sound, graphics and other effects.

When you have turned on your BBC or Electron and you can see a message at the top of the screen and a flashing cursor, what do you do? You have probably tried typing-in a friendly message like 'HELLO' but all you receive in reply is a message telling you that you have made a mistake.

In the words of a radio series, don't

Two important things can be learned from this. First, at the end of any line, unless I indicate otherwise, always press the RETURN key. That tells the computer to carry out your instruction. Second, what we have done is to give the computer a legal instruction—a command it recognises. In this case the command it understands is 'PRINT'. By now you probably have guessed that the PRINT command does what it says. It prints to the screen anything you place between the quotation marks.

You cannot type-in commands like that all the time. What we have done so far is to issue a direct command. We now need to store our commands so that

program. Each line represents a command to the computer which the machine obeys.

I used lines numbered 10 to 30. The numbers are not important—they could just as easily be lines 1, 4, 25. The important thing is that they represent a guideline to the computer as to the order in which the commands should be executed. The computer reads line 10 first, carries out whatever is written there and then proceeds to the next line, line 20. It is good convention to build a program in steps of 10, as there are always times when you will need to insert an extra line and that would be difficult if you had left no space by writing a program using steps of one.

To look at the program again type LIST (RETURN) and that command will print-out a listing of your program in the correct sequence. The command can be used only to list a program and cannot be used as part of a program.

Let us go a little further. We have seen how the PRINT statement can place words on the screen but it can also carry out mathematical instructions. Type-in the following:

```
PRINT 25*2
```

That statement causes the computer to type '50'. That is different from what we have seen previously. Note this time there are no quotation marks. In the previous example the quotation marks were placed to inform the machine that we were dealing with a non-numerical event or something which did not require any mathematics to be involved.

In this present example I have asked the computer to tell me what 25 multiplied by 2 is and it has replied with the correct answer, 50. Therefore the computer is capable of being a calculator as well. The asterisk '*' is the sign for multiplication and the division sign is '/'. Addition and subtraction uses the conventional '+' and '-' signs. Try using PRINT statement to do the following:

- (a) Add 25 and 12
- (b) Subtract 23 from 79
- (c) Divide 80 by 10

You should have typed the following to answer:

- (a) PRINT 25+12

'You could, of course, buy other people's software, but it is more interesting and more rewarding to write your own programs'

panic. Computers are only machines. Before they can produce all the wondrous effects you have seen on other machines they have to be given a set of instructions telling them what is required. That set of instructions is known as a program and is a logical sequence of commands through which the computer works its way. You could, of course, never write a program and buy other people's software but it is more interesting and eventually more rewarding to be able to write your own programs, and that is what we will do. Try typing the following:

```
PRINT "HELLO"
```

When you have typed that line, finish by pressing the RETURN key. See what happens? The word 'HELLO' has appeared on the next line. Now type the same line, except this time change what appears between the quotes. For example, you could type:

```
PRINT "MY NAME IS JEREMY"
```

Again, press RETURN when you have finished it. What has been printed to the screen has changed, this time to what you placed between the quotation marks—by the way, use the double quotation mark above the number 2.

they can be carried out in the sequence we wish. We might want, for example, to write the name and address of a friend on the screen in a number of lines. To do that try program one:

```
10 PRINT "CHRISTOPHER  
DAVIS"  
20 PRINT "10 THE AVENUE"  
30 PRINT "BASILDON. ESSEX"
```

Remember to press RETURN at the end of each line. When finished, type RUN (RETURN) and the name and address is printed on three successive lines. What you have just done is to write your first program. Not the most exciting program in the world but it is a

- (b) PRINT 79-23
(c) PRINT 80/10

We can then use what we have learned to begin to write a program to test multiplication tables. Type the following program 2a, using exactly the same line numbers:

```
10 PRINT "This program will give you the answer"
20 PRINT "to any number in the eight times table."
30 PRINT "ENTER ANY NUMBER"
```

You should by now understand what will happen if you run this program. It asks the user to enter any number. That is where we reach our second keyword statement. We need to be able to enter information or input into the computer. To do that we use the INPUT statement which tells the computer we are requesting information and the computer will wait until an answer is given. For example, type:

```
INPUT number
```

In response to the question mark enter a number. If you enter a number the '>' prompt will return. If you then type:

```
PRINT number
```

the number you entered will appear. What you have done is to allow the value entered to be given to a numeric variable, the variable name being 'number'. It could just as easily have been called 'a' or 'Fred'.

You can think of a variable as a box. When you used the INPUT statement the number you entered was placed in the box called 'number' and at a later date when you asked for the contents of the box by typing 'PRINT number' the number you entered was shown. Use the example again in program 2b but this time change the variable name, i.e., 'number' becomes 'a'. Now add two more lines to complete the program as follows:

```
40 INPUT a
50 PRINT 8*a
```

Run the program. Can you see what is happening? Line 40 waits for the user to input a number and that number is multiplied by eight in line 50 and the PRINT statement prints that result to the screen.

What happens if we enter a non-numeric value, i.e., the letter 'A'? Although it would appear that the reply is accepted, the result we obtain will always be zero. That is because the machine is expecting a numeric value and if anything else is typed-in, the computer reads it as a zero.

That example leads to the two differ-

ent kinds of variable which exist. The first we have already encountered, a numeric variable. The second kind of variable we can use is called a string variable. When using a string variable any keyboard character is accepted and stored. The difference between that and a numeric variable is that maths cannot be carried out on a string variable. To distinguish between the two kinds of variables, a certain rule is followed.

With the numeric variables we can call it what we like. Therefore where we have stored our numeric input in the program, we called it 'a' but could just as easily have called it 'number' or 'acorn'. To tell the computer we are using a string variable we add a '\$'—dollar—sign on to the end of the variable name. For instance, if we want to ask the user's name and then print a personal greeting to that person, we can write program three:

```
10 INPUT name$
20 PRINT "Nice to meet you ";name$
```

The semicolon in line 20 tells the computer to place the variable 'name\$' next to the last thing printed, in this

case a space, because we want to leave a space between 'you' and the name entered.

Therefore a string variable allows any alphanumeric character, i.e., any keyboard character, but it cannot carry out mathematics on a number entered. If you are still not sure about the difference between a numeric and string variable, try to write a program to carry out multiplication; this time use a string variable—one with a '\$' sign at the end—to work out the result.

Finally, let us learn a few more Basic keywords. The first keyword is 'LET'. You will often see in programs lines like:

```
tag=9
or
y=y+8
```

In the first example we have told the computer the numeric variable 'tag' equals 9 or, to be more exact, we have said 'LET tag=9'. The keyword LET is optional and we will not make use of it but the important thing to remember is that when we tell the computer a variable is something or that, as in the second example, the numeric variable 'y' equals the value of 'y' plus 8, we are saying 'LET this variable equal . . .'

So, for instance, if we want to print-out a name 10 times we could type 10 lines each with the same PRINT statement:

```
10 PRINT "James"
20 PRINT "James"
30 PRINT "James"
```

That is a tedious way of doing it so we can use our ability to increment a value on a variable by typing:

```
10x=0
20 PRINT "James"
30 x=x+1
40 IF x<10 GOTO 20
50 END
```

Line 10 sets the value of x to 0. Line 20 is where we print our word. At line 30 the value of x is increased by 1—LET x equal the value of x, which at this point is 0, and add 1 to it, therefore making x equal to 1. Now two new keywords, IF and GOTO. What we have said in line 40 is that IF x is less than 10 GOTO line 20, where the print phrase is repeated. That continues until x is greater than 10. If x is greater than

'The second kind of variable we can use is a string variable when any keyboard character is accepted and stored'

10 the program is finished, thus the END statement at line 50.

I have now provided sufficient information for you to start writing some interesting and useful programs and I leave you with a problem. Write a program which tests someone's knowledge of any multiplication table chosen. Use all the commands to write a program friendly to the user and offering a variety of problems to solve.

The commands you have learned so far should allow you to start writing a number of programs and next time we will deal with some new commands and consider how to plan the writing of a program.

Does your computer serve drinks?

There's a new world of high technology opening up — a world where menial tasks are no longer a chore, but have become a challenging source of inspiration, enjoyment and problem solving.

PRACTICAL ROBOTICS is the first magazine solely concerned with this rapidly expanding new area in software and hardware.

So why not subscribe *NOW* and who knows, one day, — breakfast in bed?

FOR THE BBC MICRO SOFTWARE

TINY PASCAL

Pascal-T is a 16k Eprom program capable of compiling Source Pascal into a compact and very fast threaded-interpretive-code. Full editor and disc-support are included and the program is supplied together with comprehensive documentation. **PRICE £59.00 + V.A.T.**

X CAL

An eXpert Computer Aided Learning package in 16k Eprom and support disc. No programming skill required to construct learning 'sessions' as the program is 'screen' driven. Facilities include Text pages, Graphics and Histograms. **PRICE £65.00 + V.A.T.**

FORTH

FIG-FORTH in 8k Eprom together with manual. **PRICE £34.72 + V.A.T.**

LOGO-FORTH

A 16k Eprom program introducing this very powerful but extremely friendly Turtle-Graphics language. Users also have full access to the Fig-Forth support nucleus. Full documentation is included. **PRICE £59.00 + V.A.T.**

M-UTS

Powerful machine code monitor with disc utilities.

PRICE £19.95 + V.A.T.

(Special discounts available for educational establishments for all the above software)

HARDWARE

Always in stock Printers, Disc Drives IC's etc.

FOR THE EPSON HX20

SOFTWARE

FORTH ROM including full documentation.

£34.72

HARDWARE

Expansion Unit, Paper, Microcassettes etc. Please phone for quotes

CRUISING down the river, suddenly you see an aeroplane spilling-out men in parachutes. Using the Z and X keys to steer your boat, you must try to catch the paratroopers before they fall into the water. Every man you save is worth 10 points but if you let more than 10 men drown the furious pilot of the aircraft will shoot you. **Parachute Jump** was written for the BBC B by B Norton of Bacup, Lancashire.

A CLASSIC arcade favourite is brought to your BBC B or Electron by this version from Christopher Brown of Great Barford, Bedfordshire. The object is to steer your fleet of cargo spaceships safely through the asteroids which hurtle towards you.

Ten levels of difficulty allow you to choose the number and the speed of the asteroids.

3710 REPORT

```

MRS B J GRIBBLE of Oxford wrote **Mix and Match** for the Electron and BBC B to help the youngest member of the family, aged three, to learn to use a computer and to recognise geometric shapes.

At the start, four basic shapes are displayed at the bottom of the screen. One is then selected and re-drawn at the top of the screen and an arrow moves along the bottom row. The child presses the space bar when the arrow is facing the shape matching the one at the top of the screen. A correct answer is rewarded with a flashing tick, an incorrect one with a large cross.

A new game starts automatically after eight seconds and the speed of the game can be varied by pressing ESCAPE to return to the menu.

CLEARLY HE HAD ONLY ONE KEYBOARD IN MIND WHEN HE DESIGNED THE HUMAN HAND

IMAGINE A KEYBOARD

... so simple to use that in under an hour you're touch typing the entire alphabet, numbers and punctuation.

... so effortless it needs only one hand, your eyes never leaving the screen or the document you're copying.

A keyboard you can hold in your palm, and yet, so powerful, it can replace every input, command and function key of your BBC computer ...

Just think how effortless it would be if you could *touch type* your programs, data and text.

How you could lean back and relax; be faster and more accurate; your mind free to think, and your eyes to read.

IT'S CALLED **QUINKEY**

And for **£49.95** you'll get everything you need — hardware and software — to use Quinkey with your BBC computer.

HOW CAN 6 KEYS DO THE WORK OF 72?

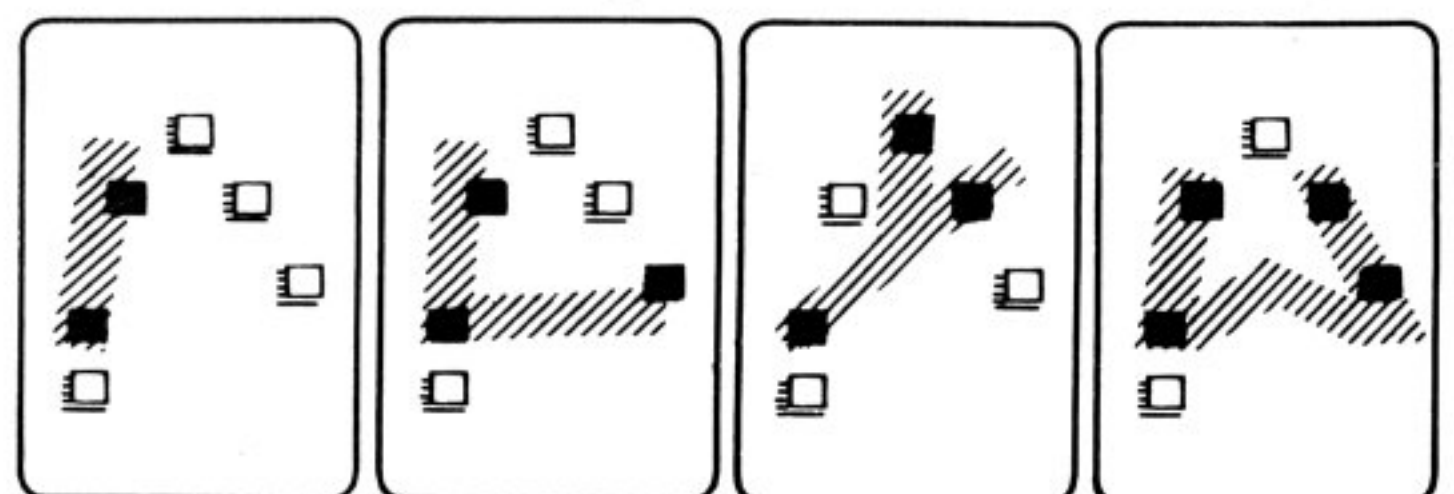

You simply press the keys in different combinations. Each combination represents a character.

Quinkey has 5 keys plus a Control key, each finger belonging to its own key — so there's no need to hunt and peck ... BUT ...

... HERE'S THE MAGIC!

Look at these diagrams:

See how the lines joining the key combinations form the characters? For each letter there's an instantly recognised and easily memorised visual clue.

That's the trick — and it works!

YOU CAN TRY IT NOW!

Rest the fingers of your right hand on a table top. Imagine the keys.

To write an "I" you press your Thumb and Index finger down at the same time.

For an "L" you press your Thumb, Index and Little fingers.

To write "Y" you use your Thumb, Middle and Ring fingers . . . and so on.

That's all there is to it.

Here's what users are saying about the keyboard:

– PETER RODWELL (as Editor of 'Personal Computer World') "took me half an hour to learn the alphabet . . . far easier than learning to type. It's an addictive device, and I'm starting to wonder how I ever managed without one."

– PETER WHEELER (in the 'Times Educational Supplement') "a new user can start to touch type after one hour's usage."

– FRANK DALE (BBC Producer – writing in 'Electronic Times') "no other machine is so easy to use, so easy to learn, so generally useful . . ."

NO RISK, MONEY BACK GUARANTEE.

If you're unhappy with your Quinkey just return it within two weeks for a full and courteous refund.

ONLY £49.95 (including VAT and postage & packing).
HERE'S WHAT YOU GET.

- ★ One Quinkey keyboard.
- ★ Breakthrough multi-channel interface for up to four keyboards (plug into analogue port).
- ★ Two new powerful software packages, PROG & WP (described below).
- ★ Comprehensive Quinkey manual.

"PROG" and "WP" (free with the Quinkey package) are utility programs written specially for the BBC.

"PROG" enables your BBC to recognise and interpret the signals from the Quinkey keyboard. It combines easily with your application programs enabling you to use Quinkey as a comprehensive alternative keyboard.

"WP" optimises Quinkey to work with word-processing packages "Wordwise," "View" and "Edword" – a perfect text-writing combination.

KEYBOARD RANGE.

All BBC "B" keyboard inputs generate from the Quinkey, except the hard-wire key, "Break."

TECHNICAL DATA:

Loading length: &605. Running length: &300.
No zero-page locations, all ADC channels.
Interrupt service vector IRQ2V, correctly chained.

TESTED COMPATIBILITY

BBC Model "B"	Acorn
OS 1.2	
BASIC I or BASIC II (unless using INKEY with negative argument)	Acorn
DFS 0.90	Acorn
View A1.4	Acornsoft
Wordwise 1.17	Computer Concepts
Edword	Clwyd Technics

QUINKEY IN THE CLASSROOM.

Quinkey keyboards allow up to four children to use one BBC computer at the same time. "QUAD" software supplied with the Educational Pack enables children to write simultaneously on a split screen and print out their work separately.

(Send the coupon if you would like more information about the remarkable results that children of all ages and abilities are having with Quinkey.)

Order from your nearest BBC Acorn dealer or by sending in the coupon below, now.

TITLE

Fire at the enemy ship as it flies overhead on its attack run. You score 10 points for each direct hit but watch for the return fire, which is extremely accurate. You can avoid it by moving your base left and right with the Z and X keys.

Fire by pressing RETURN. You have five lives and when you score 100 points you gain an extra life. There are four levels of difficulty, from easy to impossible. **Laser Battle** was written for the BBC B by C Fothergill of Gainsborough, Lincs.

PIGEON

BRIAN BUDD of Guildford, Surrey has devised an entertaining armchair version of the sport of clay pigeon shooting. Launch your pigeon with the space bar, then fire at it using SHIFT. The number of hits you have scored, the latest hi-score and the number of shots you have remaining will be shown at the bottom of the screen.

The game is not so simple as it sounds, as each pigeon you release rises at a different speed. **Pigeon Shoot** was written for the BBC B.

PAUL WILLIAMS of Bury, Lancashire earns £30 for the first of our Star Programs. Written for the BBC B, this exciting and chilling game, **Ghost Hunter**, has you chasing the skeletons which have risen unbidden from their coffins in the graveyard. You can despatch them by placing a cross over your target and pressing the fire button but beware of the ghoul which creeps stealthily down the screen.

If it reaches the fence at the bottom, or if you bump into a tombstone in the dark, you will lose one of your three lives. When you have eliminated 10 skeletons you will find yourself on a new and even spookier screen.

Use the Z and X keys to move left and right, * and / to move up and down, and the space bar to fire. Pressing RETURN allows you to super-zap the ghoul back to where it started but you can do that only three times per game.

```

PAUL EARWAKER of Ipswich, Suffolk devised this version of Noughts and Crosses for the BBC B.

Blue always starts and moves the blue cursor on to a chosen square; pressing TAB will fill in that square. Red moves the red cursor and fills the square in the same way. A continuous line of three squares, either vertically, horizontally or diagonally, wins the game.

**Second Edition
Just Published**

If you want to know
about computing . . .

THE FACTS DON'T HAVE TO BE BORING!

An entertaining, but **thorough** reference source with the most readable, comprehensive glossary you'll find anywhere. The Good Computing Book for Beginners is an essential A-Z of all the facts you need to know about computing — and none you don't!

Whether you're brand new to computing, or an old hand keen to stay ahead, you'll score by keeping this classic, top-selling book within reach to use again and again.

The author, Dennis Jarrett, is a successful journalist who was also founder editor of Which Computer? magazine — so his first edition quickly became a standard work. Now this new, substantially enlarged and revised edition covers the latest trends, terms and technology with the relevant facts — and **ONLY** the relevant facts — in **plain English**.

Here's another fact you'll find fascinating: **it will only cost you £2.95!**

Use the coupon below to get your copy right away — or buy it soon from your bookshop. It's the nonsense book you'll turn to again and again.

Please send me _____ copy(ies) of The Good Computing Book for Beginners by Dennis Jarrett at £2.95 each plus 50p post and packing. I enclose a cheque for _____ / Please debit my credit card

YOU ARE the pilot of a small aircraft which for some reason encounters a series of gates through which you must negotiate a passage to reach the far side of the screen. Each time you do that you will receive a bonus of 50 units of fuel.

On your next trip the gates will be a little narrower and it will become increasingly difficult to stay in the air. If you fail to pass through a gate you lose 40 units of fuel and if you run out of fuel you will suffer a horrible crash. Use Q and C to move your aircraft up and down.

Air Passage was written for the BBC B by A P Wood of Winscombe, Avon.

AIR PASSAGE

AN EXPERT AT
COMMUNICATIONS.**

The BBC Micro is unbeatable when it comes to holding your attention. But when it comes to talking to the rest of the outside world it's virtually speechless.

Until, that is, you speak to us.

In which case you and your BBC could soon be accessing viewdata systems throughout the country.

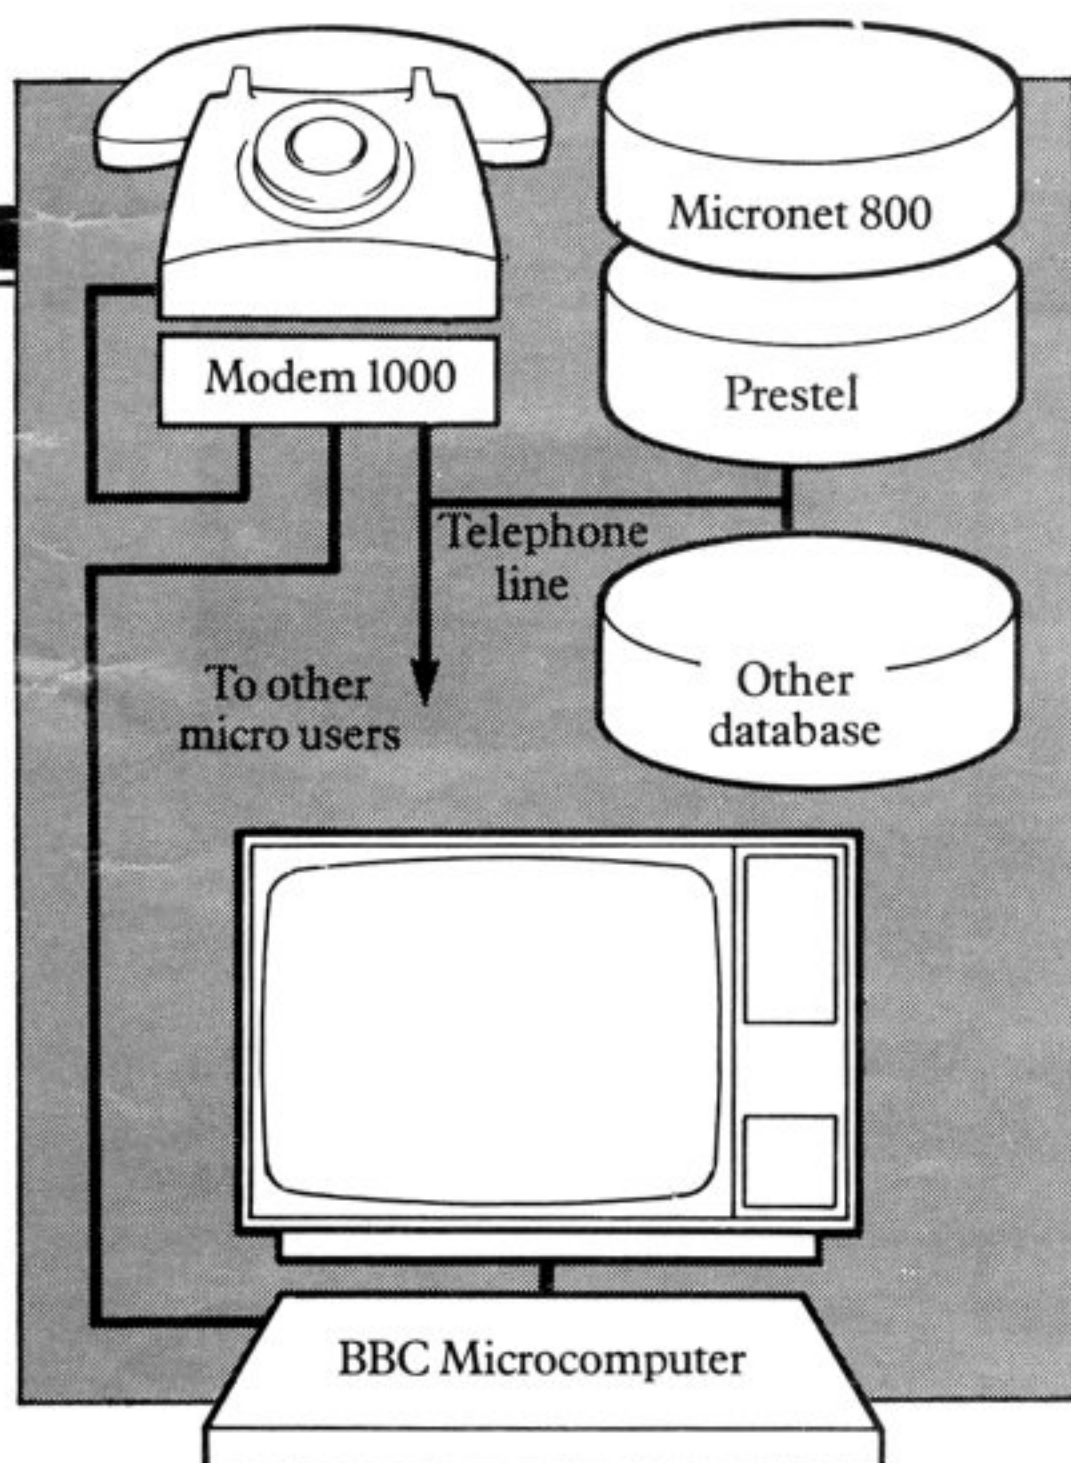

By simply linking your BBC into our purpose-designed communications and viewdata system you dramatically increase the capability of your micro. Allowing you to keep in touch with your friends. And to get answers within minutes to electronically mailed letters. You can even try your hand at the latest adventure games on Micronet 800 (as well as looking at the news, reviews, prices and best-buy information).

In addition to all this, you will also be able to access Prestel. A vast database of news and information. Helping you to book tickets for your favourite concerts. Plan your road and rail trips. And even check the weather forecast before you go.

Our communications and viewdata systems open up the world to you and your micro. And at a down-to-earth price – with systems starting from under £90.

So, if you're keen to contact the outside world... simply contact us.

APPROVED for use with telecommunication systems run by British Telecommunications in accordance with the conditions in the instructions for use.

Prism Business Systems Ltd.
Prism House, 18-29 Mora Street
City Road, London EC1V 8BT

```

THE WICKED Dr Frankenstein has imprisoned your friend at the top of his castle and you are determined to go to the rescue, but your way is fraught with hazards. First there is Dracula, who swoops out of thin air. If you are beneath him when he lands, or just past him, you lose a life. You must also dodge the prehistoric monster which lurks in the moat and jump over the barrels which roll down the stairs.

Use the Z and X keys to move left and right, and / to jump over a barrel or go up the stairs.

Gothic Horror was written for the Electron by Martin Earle of Goole, North Humberside.

TROUBLE

SCATTERED about a maze of tunnels are flashing crystals, each of which is worth 10 points, but you have only a limited time to reach them before your oxygen supply runs out. Beware, too, of the evil guardian who can glide through the tunnel walls and destroy you on contact.

If you manage to reach the top of the maze, you earn 100 bonus points. Control keys are A and Z to move up and down and left and right arrowed cursor keys.

Tunnel Trouble was written for the BBC B by Simon Rear of Immingham, South Humberside.

OUR HERO Moggy has been picking apples in the orchard when he remembers that he also has to collect all the eggs in the farmyard. Each time he picks up an egg, a large, dangerous chicken hatches from it and can kill Moggy simply by bumping into him. Moggy, however, can dispose of the chickens by dropping his apples on them.

Use Z to move left, X to move right, * to move up, ? to move down, and RETURN to drop an apple. You start with six apples and three lives and you get an extra apple every time you lose a life. It is still a good idea to kill a chicken, or even several if you manage to get them stacked one above the other, with every apple as there are six chickens to be eliminated. After that, you go to a new screen with six more apples and an extra life.

Remember that as you pick up an egg, a chicken hatches and can zap you immediately, so move out of the way quickly. The author of the game, Roddy Mack of Felixstowe, Suffolk, suggests approaching the eggs diagonally to improve your chances.

Chicken Run was written for the BBC B.

DOCTOR WHO

STRANDED on the planet of the Daleks, Doctor Who is trying to reach the Tardis before his oxygen supply fails. The Tardis however, is out of order and keeps jumping about all over the screen. Can you guide the doctor to it while keeping out of the way of the Daleks? Use Z and X to move left and right, * and / to move up and down.

Doctor Who was written for the BBC B by Ranjan Bhattacharya of Harpenden, Herts.

THERE ARE some difficult questions and some easier ones in **Monster Maths**, a multi-purpose maths quiz devised by Ross Colquhoun of Crieff, Perthshire for the BBC B.

You can choose to be tested on addition, subtraction, multiplication or division, and must complete one section correctly before you are allowed to go to the next. In the division section, you will be asked for the remainder as well as the main answer.

REGARDEZ

LANGUAGE LEARNING AIDS FOR
FRENCH, GERMAN & SPANISH

FOR BBC(32K) · ELECTRON
SPECTRUM (48K)

As used in numerous schools and colleges these programs provide a highly successful aid to modern language learning. Each cassette contains a sophisticated control program and a comprehensive series of vocabulary lessons which can be used in a variety of self-paced learning and test modes. Words, phrases etc are displayed with all necessary accents and special characters, different colours are used for masculine, feminine and neuter words to assist gender learning.

The programs are suitable for beginners, 0-level and beyond as simple commands enable new lessons in vocabulary or grammar to be created by the user, edited as required, then permanently saved for later use. Invaluable for homework and exam revision!

Two cassettes are available for each language, together these contain a vocabulary of thousands of words; Level A provides 16 lessons in general subjects, Level B provides a further 16 lessons including adjectives, adverbs and fully conjugated verb lists.

Available from your computer store or by mail order Price £9.95
Also Available "ANSWER BACK General Knowledge Quiz" Price £10.95

SHARPEN your memory and increase your knowledge of the computer keyboard with this game for the Electron and BBC B by Christopher Brown of Great Barford, Bedfordshire. The computer will display briefly a sequence of up to 10 characters — you choose the number; after the screen clears, your aim is to key-in as many of the characters as you can remember.

You can play on your own or against several other players to see who can reach the highest score.

Line Tracer II £17.99
Draw a line and the infra-red sensor picks it up and sends this 3 wheeled, twin motored robot along the course you plot.

Piper Mouse £19.99
Supersonic sound sensor activated. The condenser microphone picks up the sound to send the Piper Mouse scurrying where you want it to go.

Monkey £9.99
A command from you into the condenser microphone activates the gripper arms and sends the Monkey climbing along its rope.

Circular £29.99
Through its own hand-held remote control you issue instructions to the two independently driven wheels - sending the circular wherever you want it to go.

Memocon Crawler £34.99
This highly intelligent Movit is programmed through its own keyboard. Its impressive memory accepts a broad range of commands and gives you complete control.

MASTER A MOVIT -THE MAKING IS O

Are you ready to take on the challenge?
When you open up a MOVIT box, you move into the exciting new world of robots.

Everything from the printed circuit board to the motors are included, just waiting for you to make a start. And the detailed instructions take you through each stage of this new adventure.

To create this new generation of robot models all you need is a screwdriver and a knife.

What's more, MOVITS cost a lot less than you might think. In fact, the price is the only thing about them that's down-to-earth!

MOVITS all have their own characters and appeal. They're fun to put together, fun to run. Take your first step into the world of serious robotics. Send off for your MOVITS today.

ONLY THE BEGINNING

MORSE CODE

LEARN and practise Morse Code with this program written for the BBC B by John Hopwood of Truro, Cornwall.

The program displays the standard Morse Code table and also allows you to type in a message of up to 255 symbols which it will then reproduce in the appropriate dots and dashes. You can choose the speed of the message to suit your skill level.

Make sure your message is in capitals; anything else will be interpreted by the program as a space.

SPACE LANDING

I am relaxed...
I AM relaxed
I am RELAXED
I am relaxed
I AM RELAXED.....
.....

ON ARRIVAL at a distant planet, you must bale out of your mothership and guide your space vessel towards the moving landing craft below. Every time you achieve your difficult mission you advance to a new screen and the game becomes a little faster. If you fail and crash, you lose one of your three lives.

Move your ship left and right as it floats downwards using the < and > keys and press the space bar to drop from the mothership. Docking with the landing craft earns you 10 points, plus a bonus of the screen number multiplied by 10. At screen 10 and again at screen 20 you gain an extra life.

Steven and Mark Ozanne, who wrote **Space Landing** for the Electron, set a high score of 2,750 points.

GRAFPAD

...for as many uses
as YOU
can imagine!

BBC MODEL 2 • SPECTRUM COMMODORE 64

With Grafpad you can now add a new dimension to your computer enjoyment, but most important, it helps you create your own application programmes by the simple use of the Grafpad!

The Grafpad comes complete with a cassette comprising two programmes.

THE FIRST PROGRAMME

displays the co-ordinates of your screen area. The co-ordinates are based on the screen with a grid size of 1023 x 1279 pixel, also in the Grafpad giving you a grid size of 320 x 256 pixels!

THE SECOND PROGRAMME

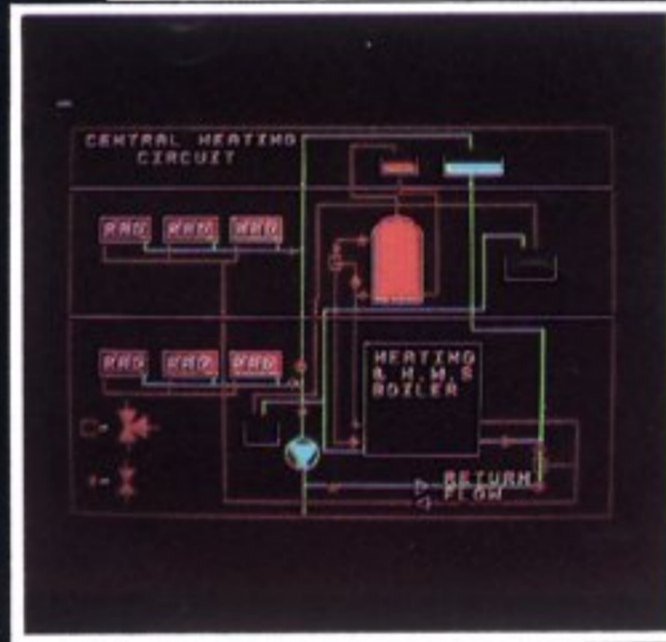

provides you with the utilities for circles, squares, triangles, free-hand, erasing line-drawing etc, and of course, full "Fill-in" facility in 16 different colours by the simple use of the pen!

Draw from a simple apple to a computer circuit - store in cassette or disk, perhaps transfer direct to a printer - in black and white or full glorious colour!

Purchase unique C.A.D. (Computer Aided Designs) programme and add further enjoyment and professionalism to your computer designs!

The Grafpad comes complete with Operational Manual, Programmes, The Grafpad and Pen and it simply plugs in your computer.

(Size: 25mm height x 55mm width x 260mm depth)
Weight: 1.2 kg (Gross)

HOW TO ORDER:

BY TELEPHONE:

If you are an American Express, Barclaycard, Diners Club or Access Card Holder simply telephone us giving your Card No., Name, Address and item(s) required and your orders will be dispatched within 48 hours!

BY POST:

Simply fill in the coupon, enclosing your cheque/P.O. made payable to: BRITISH MICRO, or use the special section for Credit Card Holders, and post to the address below. Please allow 14 days for delivery.

(The above designs were drawn by a 12-year-old at our showrooms!)

- DEALER INQUIRIES WELCOMED
- SPECIAL DISCOUNTS FOR EDUCATIONAL AUTHORITIES
