THE BEST BBC MICRO SOFTWARE

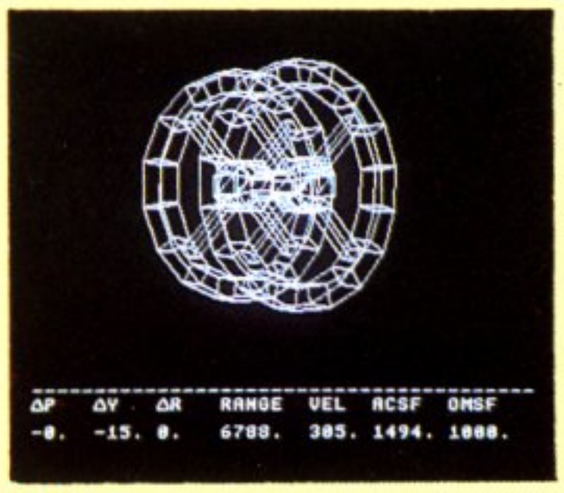
PRODUCED BY AN INDEPENDENT SOFTWARE HOUSE

★ TOP QUALITY MACHINE-CODE PROGRAMS ★

BBC

HUNCHBACK (32K) **£7.95**
Beautifully detailed animation (the best we've yet seen!) as Quasimodo leaps over the ramparts dodging rocks and arrows, swinging on ropes, and avoiding the guards's spears as he attempts to rescue Esmeralda. Twelve different screens of action! This program is sold under licence from Century Electronics Ltd; we have exclusive rights to its sale for use on the BBC micro.
(For use with KEYBOARD or JOYSTICKS).
"It is an extremely good version of the arcade game ... thoroughly recommended." ... BEEBUG MAGAZINE

CRAZY PAINTER (32K) **£7.95**
The only full-feature version available for the BBC micro. On the first screen, you take the part of a monkey being chased by African tribesmen. If you manage to survive by painting-in all the squares, the bonus screen features the monkey trying to reach his bunch of bananas. After that, you take control of a paint-roller and each square painted-in adds to your score. But beware ... the teddy-bears are now in hot pursuit. Superb animation and sound-effects.
(For use with KEYBOARD OR JOYSTICKS).
●●● *NEW RELEASE* ●●●



2002 (32K) **£7.95**
A space docking simulator using 3D graphics to model the motions and responses of the ORION 4 spacecraft. Your mission is to pilot the shuttle to a "soft dock" with the space station. PITCH, YAW, ROLL, FORWARD, LATERAL and VERTICAL engines are provided together with orbit manoeuvering booster engines. 6 skill levels provide for the completely inexperienced pilot as well as the fully-fledged commander.
●●● *NEW RELEASE* ●●●

ALIEN DROPOUT (32K) **£7.95**
A novel and unusual program. Arcade-action with this enthralling multi-stage shooting game. You have to shoot the aliens out of their "boxes" before the "boxes" fill up. Once full, the aliens fly down relentlessly, exploding as they hit the ground. Hi-score, rankings, and sound effects.
(For use with KEYBOARD or JOYSTICKS).
"... this game is as good as any on the market."... HOME COMPUTING WEEKLY.

FAIRGROUND (32K) **£7.95**
An exciting target-shooting game! Bonuses are scored for spelling out the word FAIRGROUND by hitting the appropriate target letters, and for shooting all the targets. Extra bullets are obtained by shooting the numercial targets, but watch out for the "smileys" who are intent on stealing your bullets. Music, sound effects, hi-score, and rankings.
●●● *NEW RELEASE* ●●●

CENTIPEDE (32K) **£7.95**
Incredible arcade-style game featuring mushrooms, snails, flies, spiders, and the centipedes of course. Excellent graphics and sound. 6 skill levels, hi-score, rankings, bonuses, and increasing difficulty as the spiders become more lively and the number of mushrooms increases.
(For use with KEYBOARD or JOYSTICKS).
"Visually this game compares well with the arcade version, being colourful and clear."
... YOUR COMPUTER

ROAD RUNNER (32K) **£7.95**
The only full feature machine-code version available for the BBC micro. Features include: scrolling screen, radar display, 3 pursuing cars, checkpoint flags, fuel gauge, smoke screens, 6 skill levels, rankings, increasing difficulty, and sound effects.
(For use with KEYBOARD or JOYSTICKS).
"I enjoyed the game very much ... the graphics are excellent ... movement is smooth and fast as only machine code can produce." ... HOME COMPUTING WEEKLY

FROGGER (32K) **£7.95**
Not just another version of Frogger ... this is the arcade-action version that you've been waiting to see. Graphically brilliant with gaping-mouthed crocodiles, diving turtles, flies, and frogs that flex their legs as they jump along. Increasing difficulty, and responsive controls.
(For use with KEYBOARD or JOYSTICKS).
"... very good indeed ... fast flicker-free graphics and a frog that really hops!"... BEEBUG MAGAZINE

ALSO AVAILABLE

SPACE FIGHTER (32K)	£7.95
GALAXIANS (32K)	£7.95
INVADERS (32K)	£7.95
FRUIT MACHINE (32K)	£7.95
CRIBBAGE (32K)	£6.95
PONTOON (32K)	£6.95

DISC SOFTWARE AVAILABLE NOW
All our programs are ready for despatch on 5¼" discs at £11.95 each.

OUR GUARANTEE
(1) All our software is available before we advertise.
(2) All our software is despatched within 48 hours by first-class post.
(3) In the unlikely event that any of our software fails to load, return your cassette or disc to us and we will immediately send a replacement.

Cover of professional software expanded

WELCOME to the third issue of *Acorn Programs*. In this issue we expand our coverage of professional software for the BBC and Electron. One page remains devoted to reviews of games software, while a second is included containing reviews of educational software.

All programs published this month have been contributed by readers of *Acorn Programs*. Programs which are submitted to us for consideration are all tested on both BBC and Electron computers.

The best programs submitted are then listed from our working office copy for publication in the magazine. All listings published are produced in this way, so that it is certain that programs will work on the machine for which they are intended, without amendments.

Please remember, when submitting programs for consideration, that they must be recorded on cassette or disc. Please state clearly for which computer your programs are intended, and enclose a stamped, addressed envelope if you would like them returned.

"YOUR SAME-DAY SERVICE IS BY A LONG WAY THE BEST"

(J FARMER, EDINBURGH)

SOFTWARE SUPERMARKET

CONFUSED by the vast choice of Spectrum programs? Don't be, we can help. We've played hundreds and chosen just the best of each sort. Details are in our catalogue - free with your first order. It's the only catalogue brave enough to put in the best, leave out all the rest and quote all the reviews! (We produce no programs ourselves - so our choice is impartial.) Of course, we have VALHALLA and THE HOBBIT (each £14.95) and MANIC MINER (£5.95), but here are just a few others that may surprise you (and will amaze you if you buy them!)

WE TRY TO SEND YOUR PROGRAMS BACK ON THE SAME DAY WE RECEIVE YOUR ORDER. Phone orders for VISA or ACCESS, 24 hours a day from any country where your own laws allow this! Mail order or phone credit card only. All games work with KEYBOARD CONTROL and joystix as shown.

Spend more time playing the great programs - and less time trying to find out which they are! In over 40 countries you rely on us to pick the best and send them fast. All games in stock - and tested by us - BEFORE they are advertised! Try us and see.....

ANY SPECTRUM

DEATHCHASE *"Life in the fast lane ... Deathchase is essential ...some of the best 3D graphics I've seen." (PCGames)* Speed your Big Bike through the forest: you can only fire at top speed to kill the enemy bikers, tanks, helicopters. It's a night and day 3D chase that gets faster and faster. Amazingly realistic! KEMPSTON STIX. **(Micromega) £6.95**

THRUSTA HIGHLY ORIGINAL AND FASCINATING NEW ARCADE GAME from a new company! Very neat graphics as your beautiful spaceship (with 'real' gravity) pushes and drops rocks to crush the revolting wobbling monsters' eggs before they hatch. Watch out for the guards! Great big smooth graphics make you feel you are really there! Takes a long time to complete each screen. Well-chosen keys but also KEMPSTON STIX. **(Software Projects) £5.95**

PHEENIX *"This program has everything ... superb presentation, graphics and sound. Highly recommended." (HomeCompWeekly)* The full arcade-action 5 screens in the best-ever Spectrum 'Phoenix'. 5 skill levels. Choice of character sets: demo mode. Crams 48K quality into 16K. KEMPSTON/ AGF STIX **(Megadodo) £5.50**

THE TRAIN GAME *"An excellent game ... original, well thought-out and full of action: absorbing and amusing." (S.User)* Run your own railway! Change the points to avoid crashes: watch out for hijacking by irate passengers. Full-screen graphics: 30 command keys: 2 track layouts. 7 skill levels: 14 sub-levels. Demo mode and Pause while you strike! Very catching hobby. NO STIX. **(Microsphere) £5.95**

3D SEIDDAB ATTACK *"One of the most impressive 3D progams I've seen." (PopCompWeekly)* Great 3D view through the turret of your tank as you patrol the city at night - glowing, luminous skyscrapers. Radar plan shows where you are - and were They are. 1 or 2 players and amazing flying saucers! You can see the damage they do to your tank as it happens! KEMPSTON STIX. **(Hewson) £5.95**

48K SPECTRUM ONLY

WHEELIE *"Lovely graphics, very, very difficult and challenging. Excellent value." (Crash)* Take off on your SuperDream Bike, jump buses and cars, watch out for hedgehogs as you search for the ghost rider. Will you find him? Will you beat him? Keyboard or ANY STIX. Some of the most spectacular graphics and sound we've met. Totally involving. **(Microsphere) £5.95**

PI-BALLED THE PIMANIAC'S Q-BERT!! Forget the horrible reggae flipside (you will eventually) and concentrate on changing the colour of the PYRAMID OF PI. Watch for the Piman and Sid the Snake, the Bouncing Balls, Col and Jas. 66 screens: transporter discs: graphic jokes. Buy it, it's wonderful! KEMPSTON STIX **(Automata) £6.00**

HUNTER-KILLER *"AN EXCELLENT SIMULATION." (PersCompNews)* Captain your own S-Class submarine: hunt down and kill the enemy sub: 18 controls (PROTEK STICK helps): dive, surface; chart your course: watch through your periscope the 3D target. Full-screen control room: chart room: periscope view. Quick-kill practice mode. Good full-screen graphics. Watch the track as your torpedoes run towards the enemy..... **(Protek) £7.95**

DENIS AMUSING and highly original text adventure. As Denis Thatcher, you travel up to 95 locations, seeking peace in the pub. You need to find a drink every few moves, while dropping in on the Royals, the MPs and, eventually, the Pope wearing a truss and carrying a lawnmower. It is all quite mad and lots of fun. 100% m/c. NO STIX. Written with THE QUILL (only £14.95!) The Thatcher adventure is by **(Applications) £5.50**

PAINTBOX *"If you've been looking for a Spectrum graphics aid, this is one of the best." (PopCompWkly)* We've tried it and, as they say, even a child can use it to define up to 84 User-Definable Graphics, draw all of them on-screen, save them to your programs: then there's the 2-speed hi-res drawing program and the 28-page manual and .... it is the most useful utility we've ever used. KEMPSTON/ANY CURSOR STIX. **(Print&Plotter) £7.70**

ALCHEMIST *"Graphically, this is probably the best game Imagine have produced." (PopCompWeekly)* Beautifully graphic arcade/adventure - as pretty as ATIC ATAC (£5.50) but entirely different. Amazing full-screen apparently endlessly different graphics as you search for the 4 parts of the Spell, turning yourself into a Golden Eagle from a Wizard (and back). Cast spell, fight the monsters with lightning bolts - and don't forget to eat too! Astounding. MOST STIX. **(Imagine) £5.50**

THE FOREST *"The world's most realistic adventure game." (PersCompNews)* RAVE REVIEWS all over for this fully graphic computer simulation of orienteering: you really feel you are map-making as you search for the Control Points. Draw 3D diagrams of the terrain, contour maps and feature maps. And there's 37kms of unmapped country for you to discover ...32-page manual helps. NO STIX. **(Phipps) £9.95**

STONKERS *"Excellent .... the best war game I've seen ... very addictive." (Crash)* The best battle-game graphics yet (NOT an arcade game). Simple joystick (MOST STIX) control: but the brain is in your strategy and tactics as you deploy and supply your troops. Beautiful large and small-scale maps of the battle area: moving graphics: great sound: tickertape messages: 2 skill levels. You are on the brink of battle ...make your first decision, NOW! **(Imagine) £5.50**

GO TO JAIL *"Excellent graphics are used to make a very impressive display indeed ... highly recommended." (ZXComp)* The best computer version of the famous game. From 2 to 5 players, including the Spectrum if you wish. It's ruthless, but honest. Every original feature is faithfully reproduced and the screen display (which scrolls helpfully) is simply incredible. NO STIX. **(Automata) £6.00**

HALLS OF THE THINGS *"The most exciting and innovative game I have seen ... no other game runs with such speed, smoothness of action and graphical quality." (ZX Comp)* Explore an 8-storey maze: find treasures: avoid nasties - but this time it's all graphic and you can see yourself waving your sword! Brilliant use of 19 command keys. NO STIX. **(Crystal) £7.50**

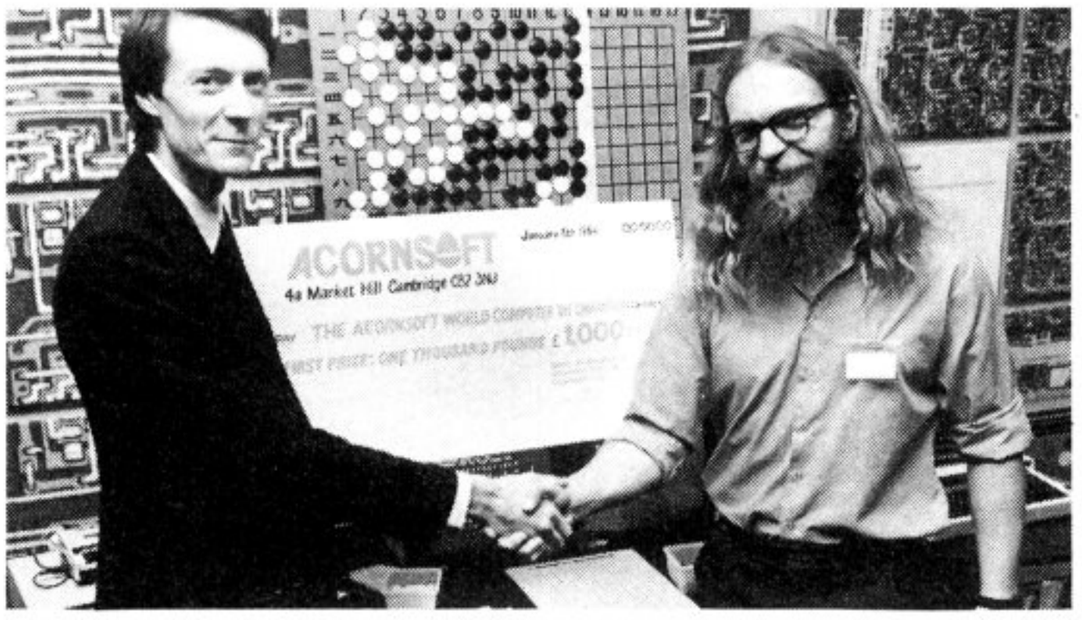
Contest champion gets development go-ahead

FOLLOWING its sponsorship of the World Chess semi-finals late last year, Acornsoft Ltd, in conjunction with the British Go Association and *A & B Computing,* sponsored a Go Tournament, in which eight BBC computers and their programmers competed for the title of Champion Computer Go player of the World.



Bronislaw Przybyla, right, is congratulated by David Johnson-Davies, managing director of Acornsoft.

The title was won by Bronislaw Przybyla, a freelance computer consultant from Wiltshire, who developed his Go program especially for the competition. Przybyla won £1,000 and is now working with Acornsoft to produce a commercial Go-playing game, based on his winning program, which is due for launch in the near future. Acornsoft managing director David Johnson-Davies comments:

"We hope the launch of a commercial program, which will be good enough to play a moderately strong game against a beginner will stimulate more people in the U.K. to take up Go themselves and help to popularise the game".

Nap hand eases BBC B input

ALTHOUGH the BBC micro has a conventional, typewriter-style keyboard which is easier to use than that of many other microcomputers, it can be used to its full advantage only by an experienced touch typist. Users without typing experience, or young users whose fingers cannot span the requisite number of keys, can find typing-in programs an arduous process.

Microwriter has produced the Quinkey keyboard, which uses only five keys and an extra shift key in various combinations to type any of the keys on the BBC B keyboard.

As the fingers of one hand cover the keys continually it is necessary to type without looking at the keyboard so that the user is free to look at a program listing.

The Quinkey keyboard and interface pack are available, for the right hand only, from Microwriter Ltd, 31 Southampton Row, London WC1B 5HJ for £48.

Exhibitions grow in popularity

COMPUTER SHOWS and exhibitions are becoming bigger and more popular. The WHICH COMPUTER? Show, held annually at the National Exhibition Centre, Birmingham, has demand for space at the 1985 show so great that the show, which attracted 40,000 visitors in January, will be expanding into a third hall in 1985.

Prior to that are The Electron and BBC Micro User Show, at the Westminster Exhibition Centre, London from March 29 to April 1; the fifth London Computer Fair, at Central Hall, Westminster, April 19, 21 and 23; The Electron and BBC Micro User Show, at Alexandra Palace, London from July 19-22 and at UMIST, Manchester from August 31-September 2, Alexandra Palace from October 25-28 and Westminster Exhibition Centre, London from December 6-9.

Cassette to disc service

ACORN computer owners who have upgraded from cassette recorder to disc drive often find that they are left with professional cassettes they cannot transfer to disc. Options open to such owners are to buy a new disc copy of the program, or to pirate that program.

Acornsoft, the software division of Acorn Computers, has introduced a new alternative. If you have an Acornsoft cassette which is also available on disc, return the cassette to Disc Replacement Service, Acornsoft Ltd, c/o Vector Marketing, Denington Industrial Estate, Wellingborough, Northamptonshire, enclosing half the price of a disc copy and your cassette will be replaced by a disc.

Thus the owner of Magic Garden on cassette, which costs £9.85, could return the cassette, pay an extra £5.75, and acquire the disc copy which retails normally at £11.50.

Acornsoft believes it to be the first cassette-to-disc exchange of its kind to be launched by a home software supplier. Computer owners, faced with a choice between paying £16.60 for one program or switching from disc to cassette to use their old software, may well expect it to be the last exchange offer of its kind as well.

Protector wins Electron

THE ELECTRON competition in the first issue of *Acorn Programs* was won by Graham Granger of Leatherhead, Surrey for his program **Protector,** a smooth-running, arcade-action game which will run on either the Electron or BBC B computer.

Granger has been programming for some years. He bought a ZX-81 when it was launched in 1981. At Christmas, 1982 he upgraded to a BBC computer but had to share time on it with other members of his family.

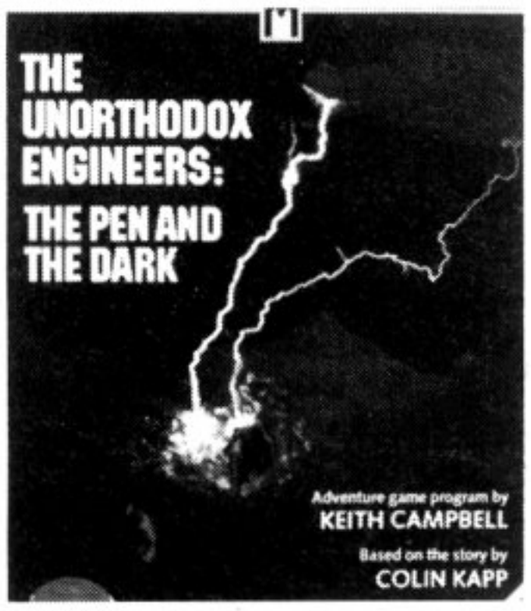
"Now I have an Electron", he says, "I will be able to spend more time programming and will be able to keep the computer in my bedroom."

He began writing Protector early last summer. At that time it was a simple game, with aliens flickering across the screen. It took six months to develop to its full form, in which four types of aliens menace a mothership and its protector in various ways.

Protector beat a variety of other programs entered for the competition to win. The majority of them were games programs, of which Protector was judged to be the most exciting and professional.

Game of the book is merely competent

THE PEN and The Dark is an adventure game, based on the story of the same title, which is provided in an accompanying book. Despite being hailed as a classic on the packaging, the story is not one of the better examples of science fiction on the market, but it is quick and easy to read and provides the player with vital clues and hints.



The game is a text adventure. A description of each location is printed at the top of the screen and so those who lose the top line of the BBC screen habitually because their television set is too small would be well-advised to take that into account before LOADing the program, as the programmer has not taken it into account and it is infuriating to attempt to play an adventure without a full description of locations.

The Pen and The Dark is a competent adventure game, with a wide variety of locations to visit, objects to collect and problems to solve.

More exciting screen use would add to the game, as would a more exciting use of the adventure format. Adventures do not have to become word games which must be solved to move from one area to the next; the pity is that an uninspiring adventure game can give people new to adventuring that impression.

The Pen and The Dark is produced by Mosaic Publishing Ltd, 187 Upper Street, Islington, London for the BBC Model B and costs £9.95.

Worst of all worlds

PHAROAH'S TOMB is a curious amalgamation of mental puzzle, graphical game and adventure. Unfortunately it has utilised the worst of all worlds. The adventure element, meant to summon the image of a convoluting **Pharoah's Tomb,** instead creates the impression of a series of identical rooms with different names, not all of which are spelt correctly. The graphical element, used as you fight enemies or collect coins, is explained insufficiently and on a par with the simplest amateur games.

Movement from one chamber to another is achieved only after finding a series of numbers in a Mastermind-type fashion, or by solving an anagram. The number puzzles are very easy, while the anagrams vary from easy to impossible.

Pharoah's Tomb is produced for the Electron by A&F Software, Unit 8, Canal Side Industrial Estate, Woodbine Street East, Rochdale, Lancashire OL16 5LB.

Adequate adventure

WRITING a successful adventure game is a complicated matter. The complexities of programming are not the only problem. The beginning of the game, at least, must be simple enough to encourage a beginner, while being complicated enough to persuade a player with experience to continue. A wide range of vocabulary should be available to the player, together with a variety of options linked by a coherent storyline.

Gideon's Gamble is an adequate adventure game; there is a vague story line, a limited vocabulary and a variety of problems to solve. It is, however, uninspiring. Once a variety of objects has been collected there is little incentive to sail away with them to continue the quest. There is also the uncomfortable feeling that the author is making fun of the player, as such disparate objects as a wheelbarrow and a pogo-stick appear.

The whole mood generated by the game is of monotony and frustration, rather than the enthralling excitement which a good adventure game can produce.

Gideon's Gamble is produced by Superior Software, 69 Leeds Road, Bramhope Leeds and costs £7.95.

New ideas on old and tried theme

MICROBE — £7.95, Virgin Games — **Attack on Alpha Centauri** — £7.95, Software Invasion — and **Transistor's Revenge** — £7.95 Softspot — are all games of the if-it-moves-shoot-it variety for the BBC Model B.

Attack on Alpha Centauri uses three-dimensional graphics. The landscape looks realistically-contoured and the attackers fly forward, increasing in size as they do so.

The aim is to kill all the deadly wasps before the player loses all three lives by being stung.

Microbe is a game in the same vein. The object is to attack an alien through its bloodstream, which means blasting the descending cells, spores, aminos and ribosome before they hit the player. Transistor's Revenge does not contain such good graphics as the other two games but what it loses in that area it compensates for in originality.

The components approach along the various data lines and can be shot only along those lines.

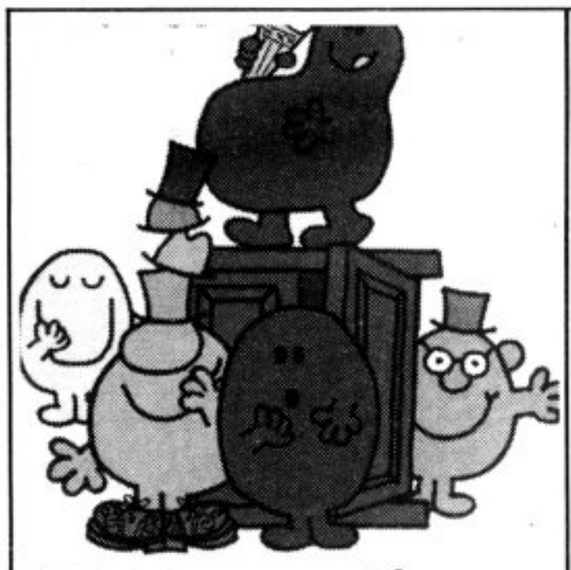
Another complication is the pulses of energy which occasionally move very quickly along a data line and prove deadly unless they are avoided.

Addicted to Chuckie Egg

MOVE ROUND the farmyard, collecting as many eggs and piles of grain as possible. That involves going up and down ladders, falling down holes and avoiding hungry geese, which will eat the corn if they reach it first — or you, if you fail to evade them. Once you have cleared one level you move to the next and movement becomes more complicated as you leap on to grain lifts and perform complicated bouncing movements to reach the last eggs.

Chuckie Egg is a development of the Krazy Kong style of game but with sufficient features of its own to make it entertaining. The speed is slow enough to make the game possible but not so slow that you can complete the game without several hours' practice. The main difficulty is in lining-up your figure with a ladder or floor to move. Movements must be very precise and there is nothing more frustrating than being eaten when you are within a pixel of safety.

A difficult but addictive game, Chuckie Egg is produced by A&F Software, Unit 8, Canal Side Industrial Estate, Woodbine Street East, Rochdale, Lancashire.



Attractive Mr Men

FIRST STEPS with the Mr Men contains four programs, aimed at four-to-eight-year-olds. They are intended to develop ideas of direction, shape matching and recognition skills, and letter recognition.

The games are very simple. Mr Forgetful's Wardrobe Game involves opening wardrobe doors, two at a time, to help Mr Forgetful locate pairs of clothing. It is the attention to detail which makes these programs into learning aids attractive to children rather than merely simple-to-write programs.

The packaging is colourful, containing pictures of the Mr Men. The keys to use are marked by a Mr Man card and the instructions are in a booklet complete with four appropriate Mr Man stories written by Roger Hargreaves. The games centre on Mr Greedy, Mr Silly and Mr Forgetful.

First Steps with the Mr Men is produced for the BBC B by Mirrorsoft, Holborn Circus, London EC1.

World Wise database lacks versatility

PRODUCERS of educational software for the BBC computer appear inordinately fond of creating a database, made up of a series of branches. Such a database lies at the heart of the Acornsoft Tree of Knowledge, the Bourne Educational Software Animal Vegetable Mineral — reviewed in the last issue — and in the Bourne Educational Software **World Wise** Program.

In World Wise there are two programs, one dealing with the U.K. and one with the world. Each program contains several headings, including rivers, lakes, flag and antiquity. Two or three items are already included on the database and it is intended that, with due use of reference books, students will be able to add new items to the database, distinguishing each item from those which have appeared previously by means of questions.

Databases are useful for classification purposes, for learning to distinguish quickly between similar things, for encouraging the use of books, and for learning long strings of facts. Only one database program, however, is needed to cover those points. World Wise is limited because it confines its subject to geography and does not contain a complete database.

World Wise is produced by Bourne Educational Software, Bedfield Lane, Headbourne Worthy, Winchester and costs £7.80 plus VAT on cassette and £9.55 plus VAT on disc.

Corrections needed

VECTORS maths tutor for the BBC B and Electron is aimed at students of O level additional mathematics or A level mathematics. In a series of 14 lessons the program deals with the skills and techniques involved with the main vector algebra requirements of those syllabi.

Once points have been explained in easy-to-understand text and diagrammatic form they are tested thoroughly in a series of multiple-choice questions. Lessons can, of course, be repeated several times until all the points in them have been fully understood.

Answering questions based on diagrams shown on-screen can be difficult for those used to working on paper but the difficulty can be overcome with practice.

When a question is answered incorrectly it would be helpful to have the correct answer and the reason for it displayed on screen, but that facility is not included in the program, meaning that either a teacher must be consulted or the lesson must be re-run to pick up a missed point.

Vectors costs £9.95 and is produced by Salamander Software, 17 Norfolk Road, Brighton, East Sussex.

Learning by sight

NOTHING but praise should go to Microtrust Software for **All Fingers Go,** which is a superb example of educational software for the BBC B. The two cassettes which arrive with the package take the user stage by stage from the level of complete novice to that of confident touch typist.

On-screen are displayed a typewriter keyboard, together with finger outlines which move to the correct positions as you type. The student is first taken through an exercise by the key to be typed flashing and a finger being shown pressing it. Once that key has been pressed the program moves to the next until a line of text is printed.

That should then be copied exactly and, when it has been copied, the number of errors made is displayed, followed by the student's speed in words per minute, if appropriate. The performance can also be analysed.

The program combines the typewriter-style keyboard of the BBC B, a clear on-screen display, a carefully-graded series of lessons and regular performance analysis to produce a clear, easy and enjoyable introduction to touch-typing. It is produced by Microtrust Software, National Extension College, 18 Brooklands Avenue, Cambridge and costs £14.95.

Taking the Tree route

TREE OF KNOWLEDGE allows its user to build, list and save a database on the BBC computer. Building the database is achieved by entering the names of two objects to be added and providing a question, the answer to which will distinguish between them. The procedure can be repeated until a substantial database has been created.

The database can then be used as a type of guessing game in which the computer chooses an item at random and provides clues from among the questions.

The most useful application of the program is demonstrated in the class database with the program. It is a classification of the animal kingdom, for use by biology students. Using it in that way for identification purposes could be very useful but experimentation shows that attempting to build a database without the help of a selection of reference books can be very difficult.

The program contains several spelling mistakes in its databases and it is to be hoped that they will be removed in future copies.

Tree of Knowledge is produced by Acornsoft Ltd, 4a Market Hill, Cambridge CB2 3NJ and costs £9.20.

Monster Hunt

A GRID is displayed on the screen and in each square of it a monster is hidden. You can display two of the monsters at a time by entering their co-ordinates. If the two you choose are identical you score a point; otherwise they will vanish. The object is to find all the pairs in as few attempts as possible.

The program is listed in two parts which should be saved on tape consecutively. The first can then be RUN with CHAIN"" and the second can then be LOADed from the first.

Monster Hunt was written for the BBC B(1.2) by Steven Lucas of Cheadle Hulme, Cheshire.

3-D maze

THIS PROGRAM produces a three-dimensional maze in MODE 2 graphics. Side walls are shown in green, facing walls in red. Any maze can be set up by changing the data in lines 20-140. In those lines 1 represents a wall, 0 represents a passage, and 8 the target. The depth and width of any new maze can be placed in the variable A% in line 170. Move through the maze using the cursor keys.

Three-dimensional Maze was written for the BBC and Electron by C J Locke of Winscombe, Avon.

MATHS

THE COMPUTER throws a random number of dice. Add the numbers shown on their tops, which are displayed in the left-hand column, and their bases, which are shown in the right-hand column. The computer will then indicate the answer. An ideal program for learning and practising addition.

Maths was written for the BBC B and Electron by James Morle of Formby, Liverpool.

FOR THE BBC MICRO
SOFTWARE

TINY PASCAL
Pascal-T is a 16k Eprom program capable of compiling Source Pascal into a compact and very fast threaded-interpretive-code. Full editor and disc-support are included and the program is supplied together with comprehensive documentation. **PRICE £59.00 + V.A.T.**

X CAL
An eXpert Computer Aided Learning package in 16k Eprom and support disc. No programming skill required to construct learning 'sessions' as the program is 'screen' driven. Facilities include Text pages, Graphics and Histograms. **PRICE £65.00 + V.A.T.**

FORTH
FIG-FORTH in 8k Eprom together with manual. **PRICE £34.72 + V.A.T.**

LOGO-FORTH
A 16k Eprom program introducing this very powerful but extremely friendly Turtle-Graphics language. Users also have full access to the Fig-Forth support nucleus. Full documentation is included.
PRICE £59.00 + V.A.T.

M–UTS
Powerful machine code monitor with disc utilities.
PRICE £19.95 + V.A.T.

(Special discounts available for educational establishments for all the above software)

HARDWARE

Always in stock Printers, Disc Drives IC's etc.

FOR THE EPSON HX20

SOFTWARE
FORTH ROM including full documentation. **£34.72**

HARDWARE
Expansion Unit, Paper, Microcassettes etc. Please phone for quotes

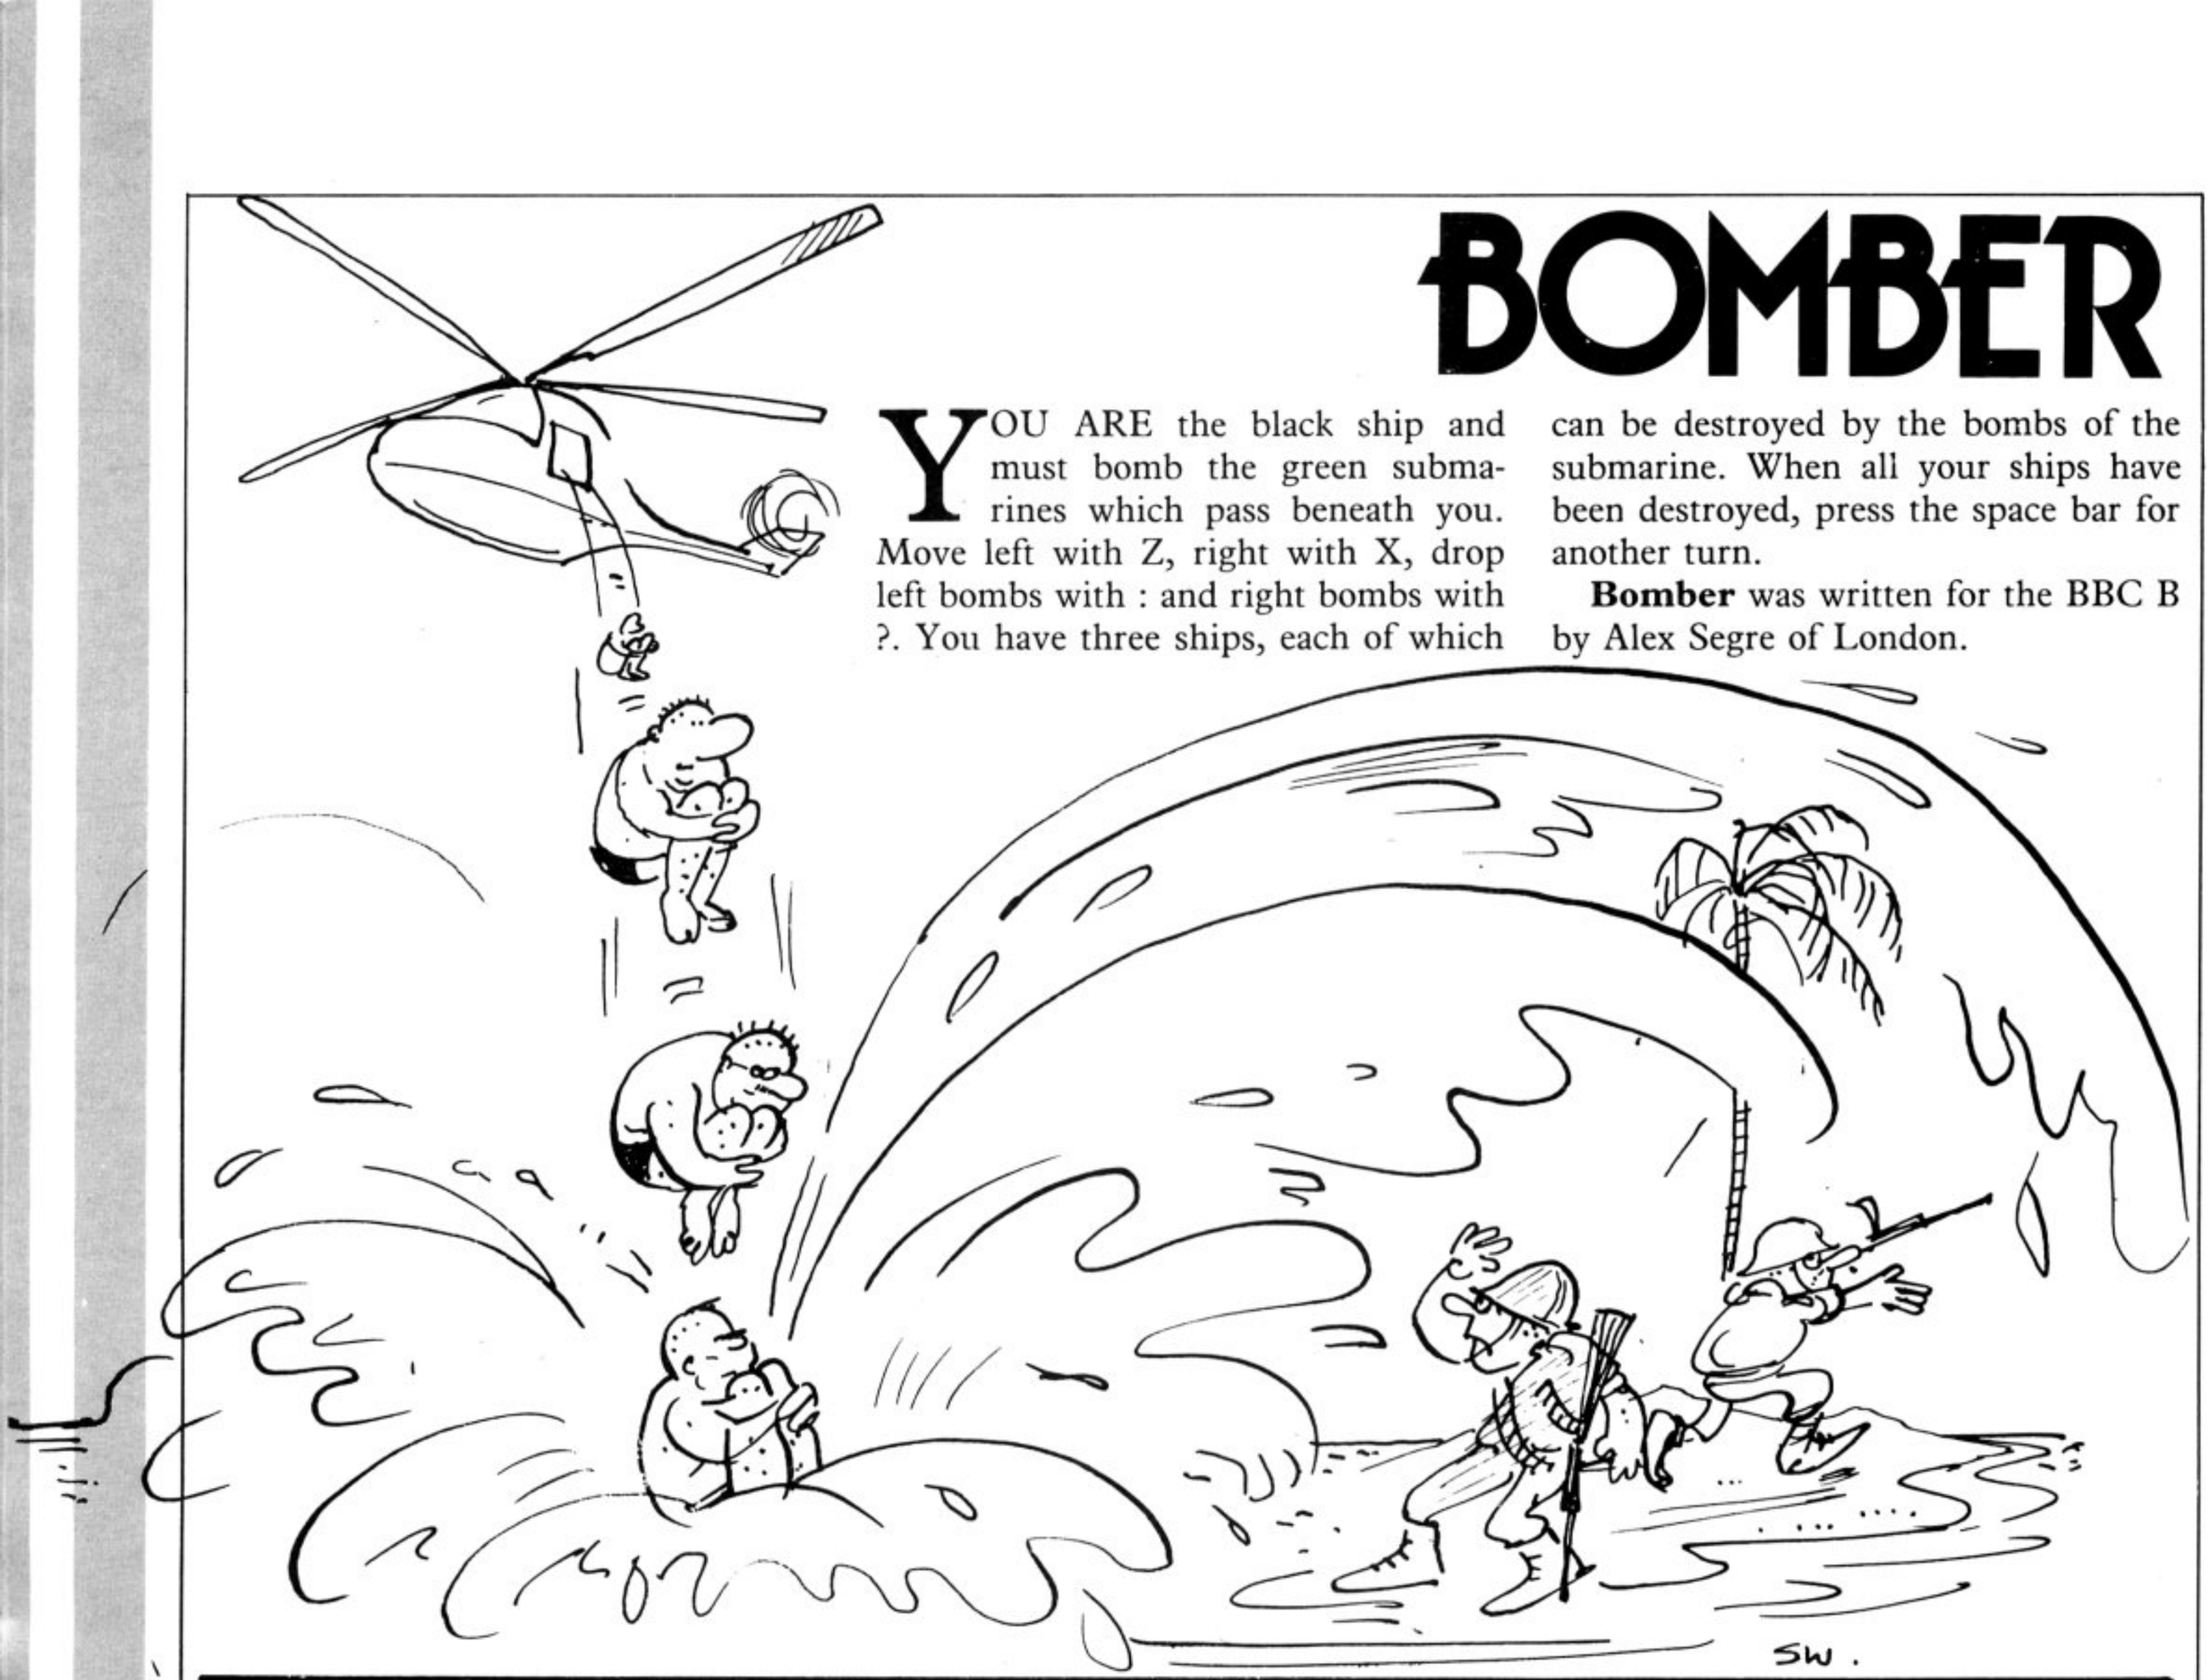
BOMBER



YOU ARE the black ship and must bomb the green submarines which pass beneath you. Move left with Z, right with X, drop left bombs with : and right bombs with ?. You have three ships, each of which can be destroyed by the bombs of the submarine. When all your ships have been destroyed, press the space bar for another turn.

Bomber was written for the BBC B by Alex Segre of London.

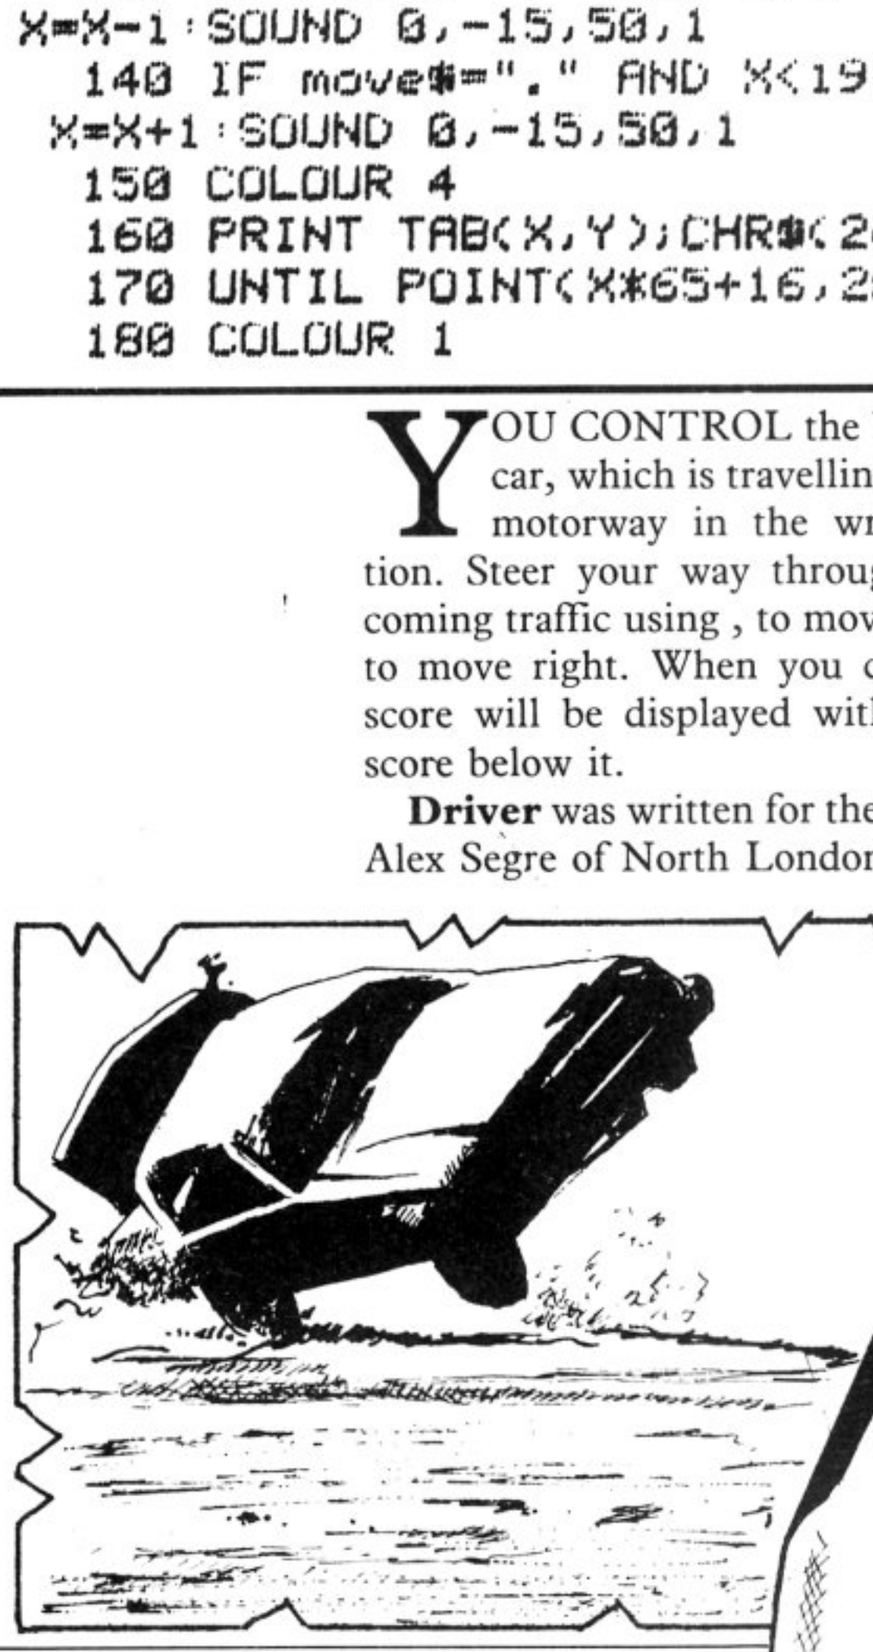
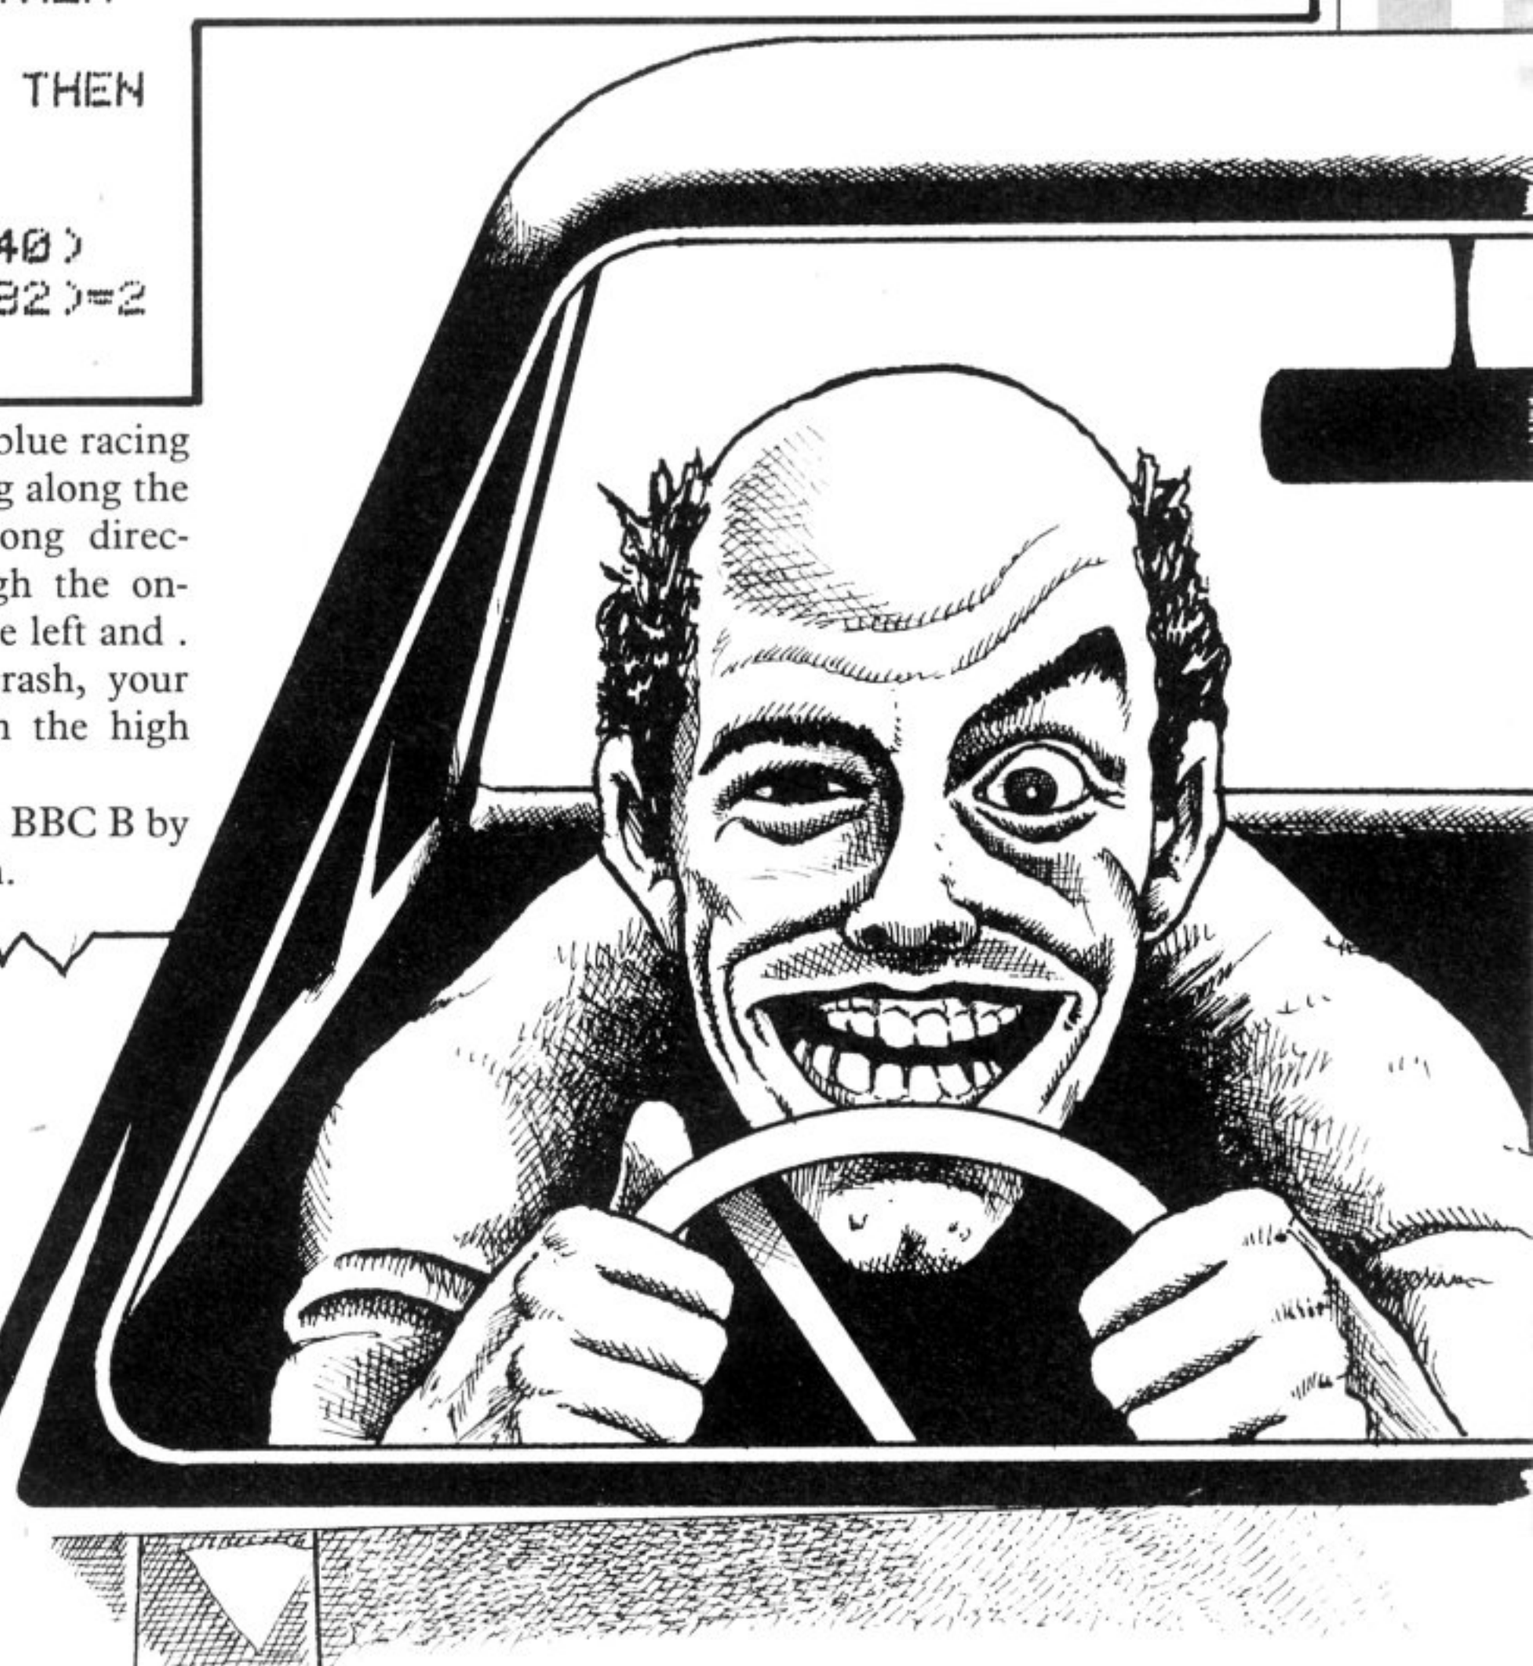
YOU CONTROL the blue racing car, which is travelling along the motorway in the wrong direction. Steer your way through the oncoming traffic using , to move left and . to move right. When you crash, your score will be displayed with the high score below it.

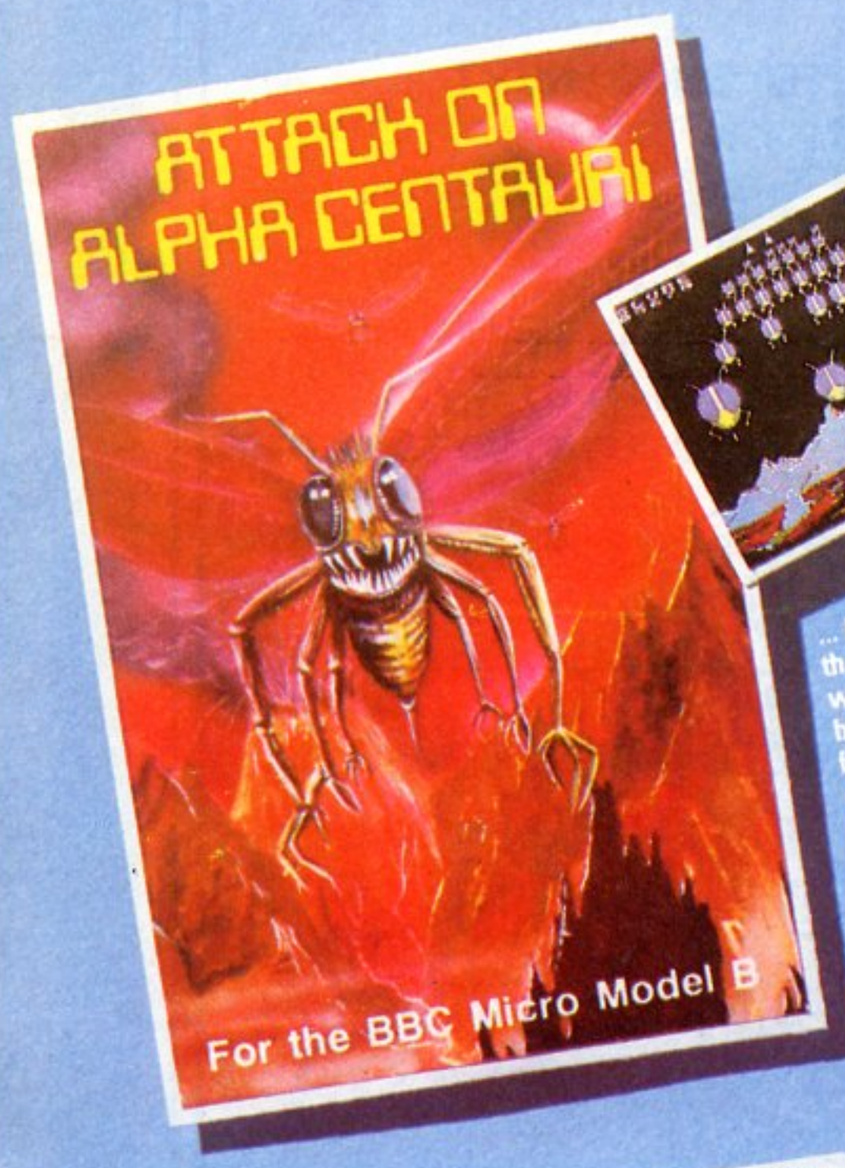
Driver was written for the BBC B by Alex Segre of North London.





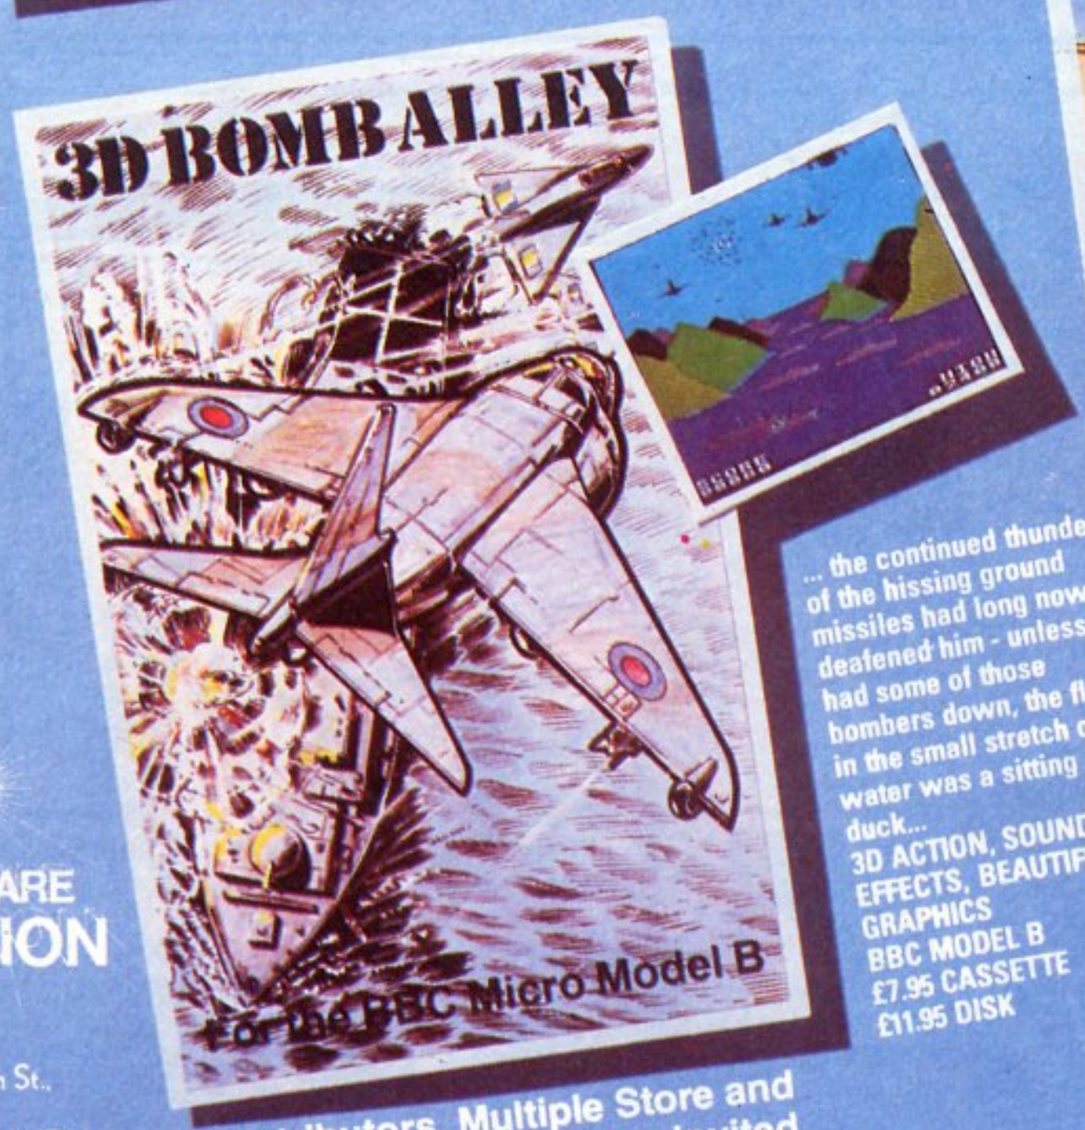
The invasion has begun... for BBC Model B

Let excitement invate your home computer! Travel to Alpha Centauri. Enter the Vortex. Command the ground missiles, or join the shoot-out at the O.K. Corral!



... he punched the key, and the control monitor filled with the picture of bug-eyed wasps attacking from their volcanic nest; decisively he dived to the left and his laser gun burst into action...
3D ACTION, EXPLOSIVE SOUND EFFECTS
BBC MODEL B
£7.95 CASSETTE
£11.95 DISK

... there was no escape, he had to enter the Vortex and bet on his skills! He grabbed the manual controls and with determination fired both upper deck guns...
KEYBOARD OR JOYSTICK, EXCELLENT SOUND
BBC MODEL B
£7.95 CASSETTE
£11.95 DISK



... the continued thunder of the hissing ground missiles had long now deafened him - unless he had some of those bombers down, the fleet, in the small stretch of water was a sitting duck...
3D ACTION, SOUND EFFECTS, BEAUTIFUL GRAPHICS
BBC MODEL B
£7.95 CASSETTE
£11.95 DISK

...the movement of the saloon-bar door was all the warning he needed! At the speed of light his hand moved toward his holster, while a sixth sense warned him of the upper floor window...

DEFINER

THIS ROUTINE can be used to work out user-defined characters. An eight by eight grid is displayed on the screen and a cursor can be moved round it using Q,W,U and 8. Squares can be filled by pressing Z and cleared by pressing X. Once the character is complete, press TAB to find the decimal values of each line. They can then be typed after VDU 23,224 and the character will then be displayed by pressing VDU 224.

Definer was written for the BBC computer by Edmund Quek of Mitcham, Surrey.

```

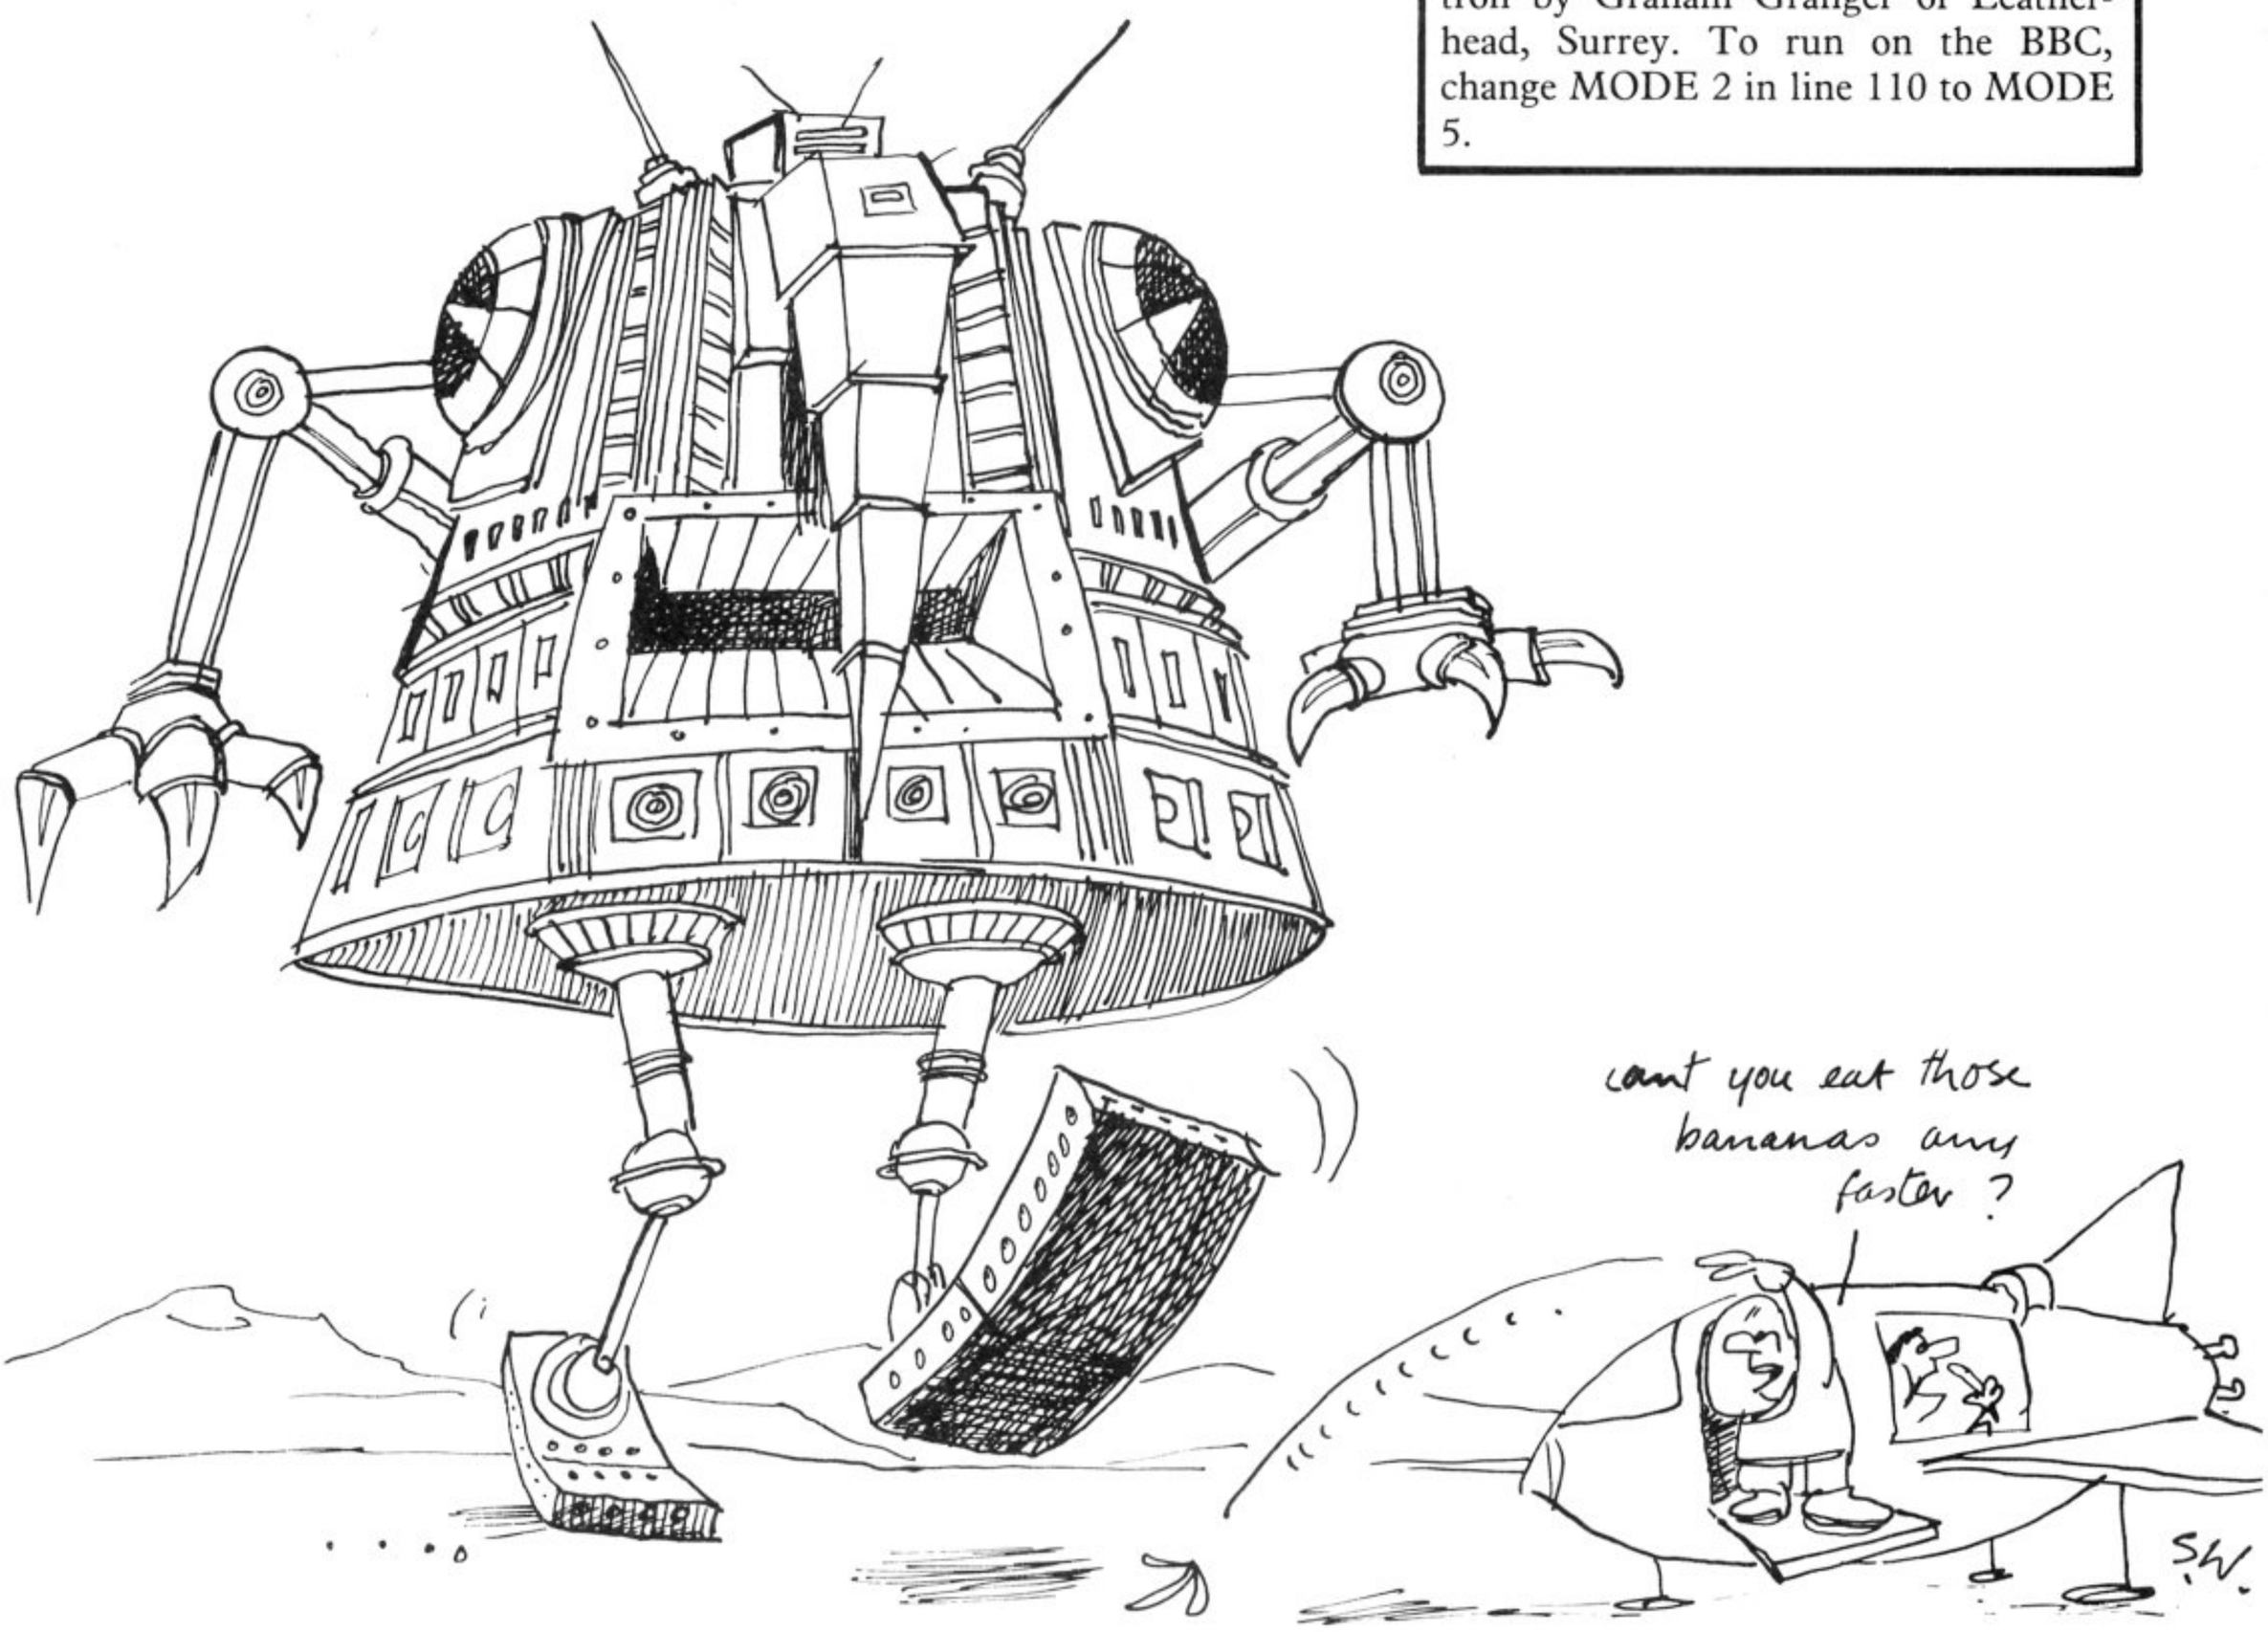
Prote

PROTECT the mothership from the dangerous Walkers, Bouncers and Droppers as well as the harmless Treader. Move left with Z, right with X, fire with RETURN and move upwards with SHIFT — gravity will pull you down again. Eight small mines are scattered round the screen. Seven of them are harmless but one is deadly and can disable your gunship if you shoot it in error.

Protector was written for the Electron by Graham Granger of Leatherhead, Surrey. To run on the BBC, change MODE 2 in line 110 to MODE 5.



ector

H&H SOFTWARE

PRESENTS 3 NEW TAPES

for the

BBC 32K COMPUTER

to add to their existing range of games and educational software.

LOONEY LIFT
A new action packed arcade game with hi-res graphics, full colour and sound. Keep your guests jumping, operate the lift and watch out for the luggage. The alternative is the sack! £7.50

CHEMIPLANT
Another first? A chemical plant simulation. Avoid explosions, spills and other disasters on your way to your first million. Plant manual included. Hi-res graphics. £7.50

STORY
Electronic storytelling!
First make up some scenes using pictures from the computer bank or use your own drawing skills. Then write your story. Up to 7 screens can be displayed, saved and printed. £6.50

To get more information about our new and existing software, ask for a catalogue. Please send a s.a.e.

★ ★ Disc versions available: please add £1.50 ★ ★

Please send orders and cheques/PO to:

KEYBOARD permits its user to play tunes on the BBC B by pressing keys. The BBC can be used as a piano, an organ, as a synthesiser, or in "fantasy" mode. The program will RUN on an Electron, although the sound effects will not be so varied or realistic. It can also be RUN in Mode 5 on the BBC A.

Written by Philip and Stephen Gales of Hornchurch, Essex.

BBC SPEECH

PRICE BREAKTHROUGH

Speech Synthesizer For The BBC Computer

Totally unlimited vocabulary is now possible with the revolutionary "SWEET TALKER" Speech Synthesizer for the B.B.C. A or B Microcomputer, any series.

The CHEETAH "SWEET TALKER" simply plugs into speech socket IC99 within the computer.

No soldering, no cutting of tracks, no headaches.

Based on an allophone system you can easily program any word, sentence or phrase and incorporate speech into your software games.

Fully tested and guaranteed.
Complete with demonstration cassette and full instructions.

Simply Incredible at

£24.95

Price includes V.A.T., Postage and Packing.
Delivery normally 14 days.
Export orders at no extra cost.
Dealer enquiries welcome.

Octal Characters

OCTAL CHARACTERS incorporates a short assembly language routine which converts decimal to binary. When RUN the program will print any character typed-in eight times larger than normal size.

Written for the BBC B and Electron by C J Locke of Winscombe, Avon.

GOLD SEARCH

A LARGE GRID is displayed on the screen and in one of the squares on that grid gold is hidden. Move your man round the screen by entering the co-ordinates of the square to which he must move. After each turn the direction in which the gold can be found will be displayed and a section of the screen in which the gold is not present will be blocked-off.

Gold Search was written for the BBC B and Electron by A Beesley of Abingdon, Oxon, who has used it at school for educational purposes.

TEN NUMBERS are displayed on the screen. Flying figures will appear above the numbers and by pressing the relevant number on the keyboard they can be shot down. You have 30 shots.

Gallery was written for the BBC B by M Turney of Rheindalen.

Take flight this winter...

...with the most diverse simulators available

I'M FREDDIE—FLY ME!

...a 747 flight simulator...but I was disappointed with it...basic program unbearable. But, I would like to recommend another flight simulator —F for Freddie—a machine language program from Kansas City Systems.
—Popular Computing Weekly

F FOR FREDDIE IS THE HARDEST GAME THAT YOU WILL EVER PLAY!

Requires absolute concentration to prepare, take-off, fly and land a tri-star jet at varying destinations using a staggering 36 control keys!

If you only play the arcade type of game, needing just a couple of keys and the space bar to play, then this is most certainly not for you

If however, you are prepared to sit at your computer for literally hours on end getting to grips, and then give a considerable amount of effort and time into actually trying to solve it, then this is definitely for you.

Though F for Freddie is a flight simulator type of game, it is not one with simple operation and the ground appearing at the front of you, but is as accurate a simulation of not only flight, but preparation, take-off and the many more occurances associated with flying a tri-star jet as a 32K micro will allow.

Controls? A mind boggling 36 of them! And it is here where the logic and skill comes in, as everything must be done not only in the correct order but at the right time. Yes, it's in real time, with the clock ticking relentlessly away.

But the great asset of this 'game' is that every little piece of information you require is shown on the screen, nearly fifty in all, continuously being updated, with the colours being cleverly used to depict different, changing, situations.

Eventually you will master the take-off, then even manage to fly and at long last manage to land. But unlike all other games, at this stage you don t put it away for ever, for you have seven different destinations, all on different courses and distances...

There are plenty of instructions on the 36 controls and even a little advice, but as the whole thing is a colossal challenge, you are not told how to fly Freddie, this you have to discover entirely for yourself...

At times you will wish, as most certainly will your family, that you never bought the blasted thing!

£9.50 Vat and post paid

KANSAS the longest established software publishers in the business, now in our sixth year, backed by 27 years media publishing from the same address!

The service is the best in the country. Every order is cleared the very same day it is received, whether cheque or credit card, and despatched by our private Post Office collection at 4.30 every working day. All first class and by the faster metered mail.

Best of all is our guarantee. Should any program fail, no matter how caused, it will be replaced absolutely free of charge, this year, next year or in ten years...yes, it's guaranteed for life!

Programs are on cassette and for BBC model B

If you want delivery tomorrow, simply ring before 4pm using an Access or Barclaycard

The most realistic computer flying experience you can have!

FIGHTER PILOT

With a true 3D cockpit view and accurate eight direction joystick control, this just has to be the most realistic computer flying experience you can get.

As a fighter pilot you have to destroy the enemy planes before they get to your cities. Control of movement is by joystick: climb, bank and climb starboard, bank starboard, bank and dive starboard, dive, bank and dive port, bank port, bank and climb port, all giving infinite control. Throttle, firing and all other controls are on the keyboard.

At the start of the game you have a view of the runway and it is up to you to take your fighter off without mishap. As you climb away, you switch on the radar, which will show you the position of the enemy. As you get closer the plane will appear on the screen and then it is up to you to get it in your sights and blast away with your air-to-air missile. Certain enemy planes have kamakazi instincts and will dive at your cities, then you are in trouble!

The graphics include a combined Turn and Bank indicator and Artificial Horizon, across the whole screen showing the actual state of your flying at all times. The Radar shows the enemy position in relationship to yourself. The enemy plane is lifelike as is the firing and explosions. Colour is used and of course sound.

Further information includes fuel, speed, altitude, rate of climb/decent and score, with a complete score table as well.

As your fuel diminishes, you can actually land your fighter, lowering the undercarriage and getting an accurate view of the runway, with the operation needing good joystick control. You can then refuel, take-off and go into the attack again without any loss of your score.

JOYSTICK ONLY
This program will not operate without a joystick fitted

£8.50 Vat and post paid

The screen below is what you actually see—a true 3D cockpit view with the artificial horizon moving as you make joystick movements, with the enemy moving into your sights to destruct

NUMBER GAME

THE FIRST THROW of the dice will determine what you need to throw in subsequent turns. If you throw a 7 or an 11 on your first attempt you win immediately and if you throw a 3 or a 12 you lose automatically. If you throw any other number, you must throw that number again before throwing a seven to win.

Number Game was written for the BBC B by Brian Taylor of Chilwell, Nottingham.

Long Multiplication

LONG MULTIPLICATION takes the hard work out of lengthy arithmetic exercises when you need to show your working. The program asks for two numbers and then multiplies them, setting-out the answer neatly in the manner commonly taught in schools.

Long Multiplication was written for the BBC B or Electron by Derek Chown of Wimborne, Dorset.

Long Division

THIS PROGRAM asks you for two numbers and then divides the first by the second: It prints both the answer and the working. If there is a remainder, it will be shown at the end of the working. If the program is given numbers after the decimal point, it will answer to the same number of decimal points.

Long Division was written for the BBC B or Electron by Derek Chown of Wimborne, Dorset.

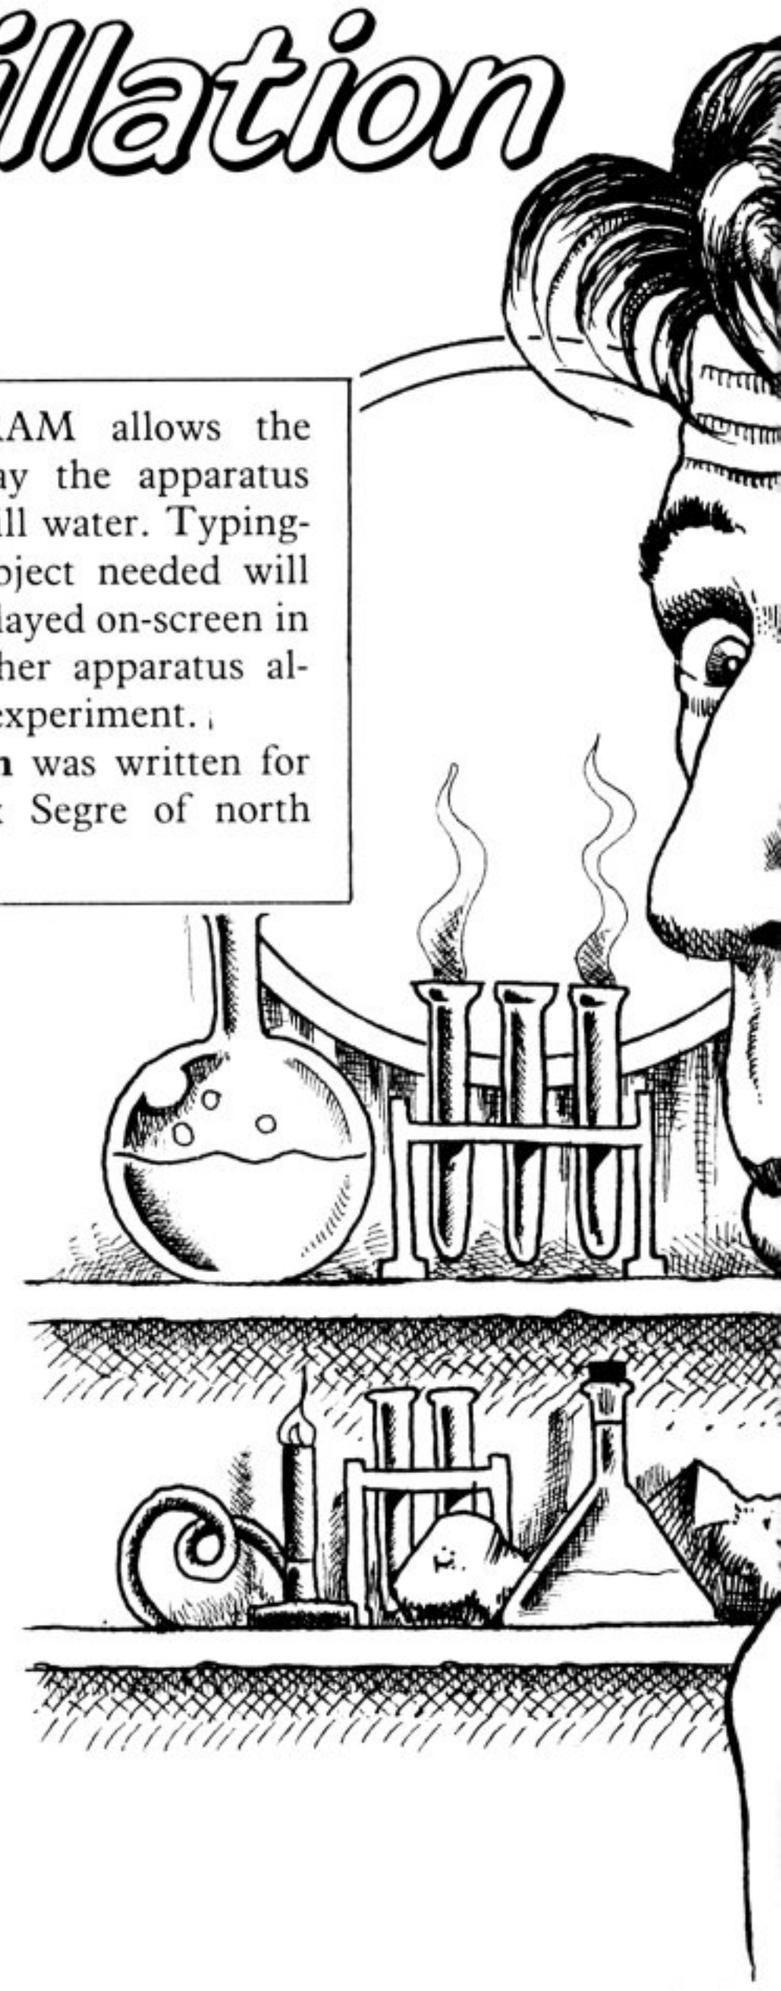
Water Distillation



THIS PROGRAM allows the user to display the apparatus needed to distill water. Typing-in the name of an object needed will result in its being displayed on-screen in correct relation to other apparatus already chosen for the experiment.

Water Distillation was written for the BBC B by Alex Segre of north London.

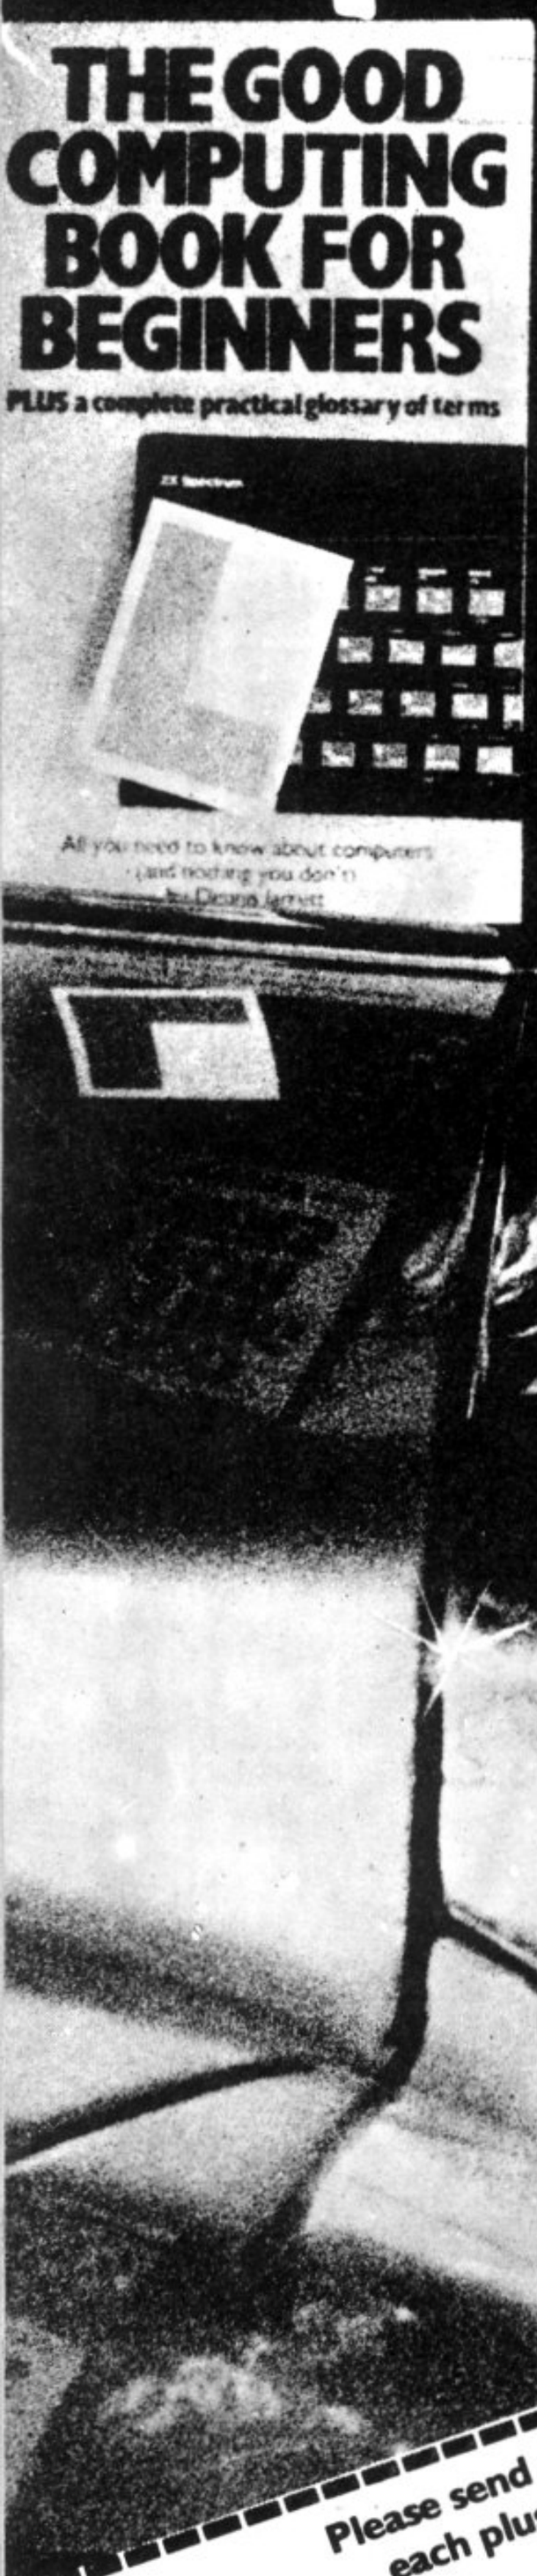
Second Edition Just published

If you only buy ONE computing book

THIS IS THE CLASSIC!



An entertaining, but **thorough** reference source with the most readable, comprehensive glossary you'll find anywhere. The Good Computing Book for Beginners is an essential A-Z of all the facts you need to know about computing — and none you don't!

Whether you're brand new to computing, or an old hand keen to stay ahead, you'll score by keeping this classic, top-selling book within reach to use again and again.

The author, Dennis Jarrett, is a successful journalist who was also founder editor of Which Computer? magazine — so his first edition quickly became a standard work. Now this new, substantially enlarged and revised edition covers the latest trends, terms and technology with the relevant facts — and ONLY the relevant facts — in **plain English.**

Here's another fact you'll find fascinating: it will only cost you £2.95!

Use the coupon below to get your copy right away — or buy it soon from your bookshop. It's the **one** book you'll turn to again and again.

Please send me ____ **copy(ies) of The Good Computing Book for Beginners by Dennis Jarrett at £2.95 each plus 50p post and packing. I enclose a cheque for** ____ **/ Please debit my credit card account Visa/Access/Diners/Amex number** ____

Pontoon

PLAY a traditional game of **Pontoon** on your BBC B against friends or the computer. The object is to hold cards totalling 21 or the nearest possible lowest figure. A total exceeding 21 will lose automatically or "bust". Take as many cards as is necessary or safe and the computer will make its selection.

```

Bank Robber

BREAK into your local bank and steal as much money as possible. Vicious guard dogs and brutal guards will reduce your strength and shoot at you, but bags of money can be found in the vaults. The aim is to leave alive with as much money as possible. For the BBC B and Electron.

IN ORDER

THE COMPUTER will display a square comprising 16 smaller squares. Fifteen of them contain a letter while the other contains a space. The aim is to arrange all the letters in alphabetical order by moving letters adjacent to the space repeatedly into the space.

In Order was written for the BBC B by Neil Devlin of Dundee, Tayside.

GOLF

PLAY a simple game of **Golf** on your BBC B or Electron. You will be told how many yards you have to play and par for the hole. You can then select a club or a putter to hole out as quickly as possible. There are nine holes to play and, when you finish, you will be told whether your game was above or below par.

Errors & MISHAPS

PART of a line was omitted from **Colour Logic** in the December/January issue. Line 790 should end with NEXT I, as printed. Line 800 should begin:
800 IF RIGHT > CORRECT AND RIGHT
and should continue <> 0 THEN as printed.

Line 730 of INVASION in the same issue should end THEN GOTO 50.

Simon's Game

ON THE SCREEN are displayed four coloured sections, each with its own sound and a corresponding cursor key. The computer will flash one of those sections and play the appropriate note. The player must then press the corresponding cursor key. The computer will then play two notes and the two corresponding keys must be pressed in sequence. The number of notes played will increase by one each turn until an error is made by the player, when the score will be displayed.

Simon's Game was written for the BBC B by N Mirza of Edgware, Middlesex.

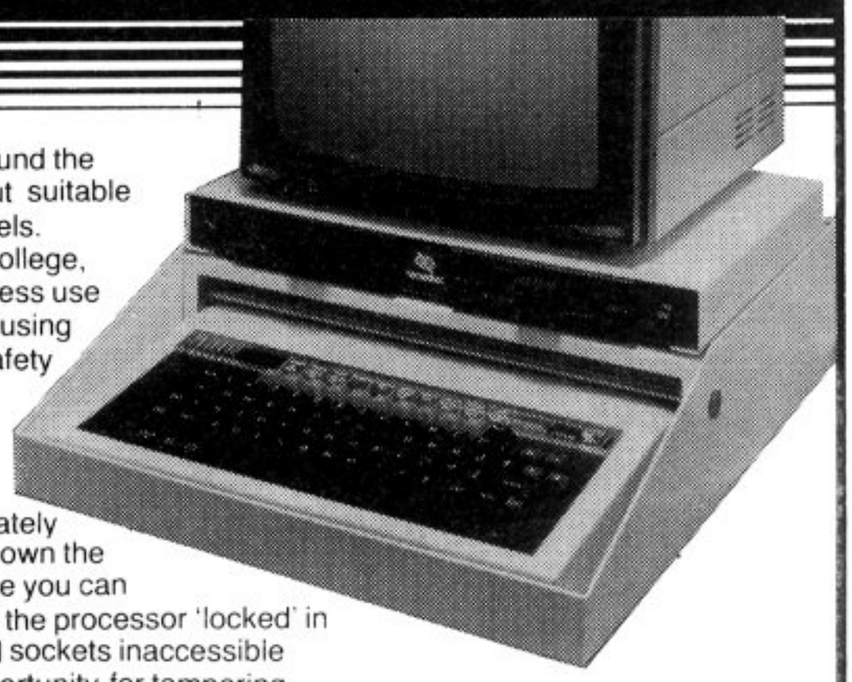
SAFETY & SECURITY WITH THE *NEW* TIDYBASE MICROCOMPUTER HOUSING



Designed around the BBC model B but suitable for various models.

For School, College, home and business use this compact housing offers special safety and security features. Made up of individual modules– available separately – if you already own the original Tidybase you can upgrade it. With the processor 'locked' in place; plugs and sockets inaccessible there is little opportunity for tampering or pilfering.

- Optional and unique security bar locks equipment in place.
- 3 or 4 way socket accommodates monitor, processor, drive, printer etc. One external lead only for mains input – no multi-plugging, no adaptors.
- Strong metal construction with safety edges, stoved finished Brown or Cream.
- All individual modules interlock to provide complete housing.
- Alternative housings for various disk drives available.
- Optional trolley for ease of movement or unlock and carry the system.

ADVENTURE REVIEWS

"Adventures which have a fast response time, are spectacular in the amount of detail and number of locations, and are available to cassette owners . . Simply smashing!"
– Soft, Sept 83

"**Colossal Adventure** is included in Practical Computing's top ten games choice for 1983: "Poetic, moving and tough as hell."
– PC, Dec 83

"**Colossal Adventure** . . For once here's a program that lives up to its name . . a masterful feat. Thoroughly recommended"
– Computer Choice, Dec 83

"**Colossal Adventure** is one of the best in its class. I would recommend it to any adventurer."
– Acorn User, Feb 84

"**Adventure Quest** . . This has always been one of the best adventures for me as it seems to contain the lot. In all it took me about eight months to solve."
– PCW, 18th Jan 84

"To sum up, **Adventure Quest** is a wonderful program, fast, exciting and challenging. If you like adventures then this one is for you" *– NILUG issue 1.3*

"Colossal Adventure is simply superb . . For those who want to move onto another adventure of similar high quality, **Dungeon Adventure** is recommended. With more than 200 locations, 700 messages and 100 objects it will tease and delight!"
– Educational Computing, Nov 83

ADVENTURE REVIEWS

"Colossal Adventure . . undoubtedly the best Adventure game around. Level 9 Computing have worked wonders to cram all this into 32K . . Finally **Dungeon Adventure**, last but by no means least. This is the best of the lot – a truly massive adventure – you'll have to play it yourselves to belive it."
– CBM 64 Users Club Newsletter

"The puzzles are logical and the program is enthralling. **Snowball** is well worth the money which, for a computer program, is a high recommendation."
– Micro Adventurer, Dec 83

"**Snowball** . . As in all Level 9's adventures, the real pleasure comes not from scoring points but in exploring the world in which the game is set and learning about its denziens . . this program goes to prove that the mental pictures conjured up by a good textual adventure can be far more vivid than the graphics available on home computers."
– Which Micro?, Feb 84

"**Lords of Time.** This program, writen by newcomer Sue Gazzard, joins my favourite series and is an extremely good addition to Level 9's consistently good catalogue . . As we have come to expect from Level 9, the program is executed with wonderful style – none of those boring "You can't do that" messages! Highly recommended."
– PCW, 1st Feb 84

MIDDLE EARTH ADVENTURES

1: COLOSSAL ADVENTURE
A complete, full size version of the classic mainframe game "Adventure" with 70 bonus locations added.

2: ADVENTURE QUEST
Centuries have passed since the time of Colossal Adventure and evil armies have invaded The Land. The way is long and dangerous; but with cunning you can overcome all obstacles on the way to the Black Tower, source of their demonic power, and destroy it.

3: DUNGEON ADVENTURE
The trilogy is completed by this superb adventure, set in the Dungeons beneath the shattered Black Tower. A sense of humour is essential!

THE FIRST SILICON DREAM ADVENTURE

1: SNOWBALL
The first of Pete Austin's second trilogy. The giant colony starship, Snowball 9, has been sabotaged and is heading for the sun in this massive game with 7000 locations.

THE LORDS OF TIME SAGA

7: LORDS OF TIME
Our congratulations to Sue Gazzard for her super design for this new time travel adventure through the ages of world history. Chill to the Ice-age, go romin' with Caesar's legions, shed light on the Dark Ages. etc.

Price: £9.90 each (inclusive)

Level 9 adventures are available from good computer shops, or mail-order from us at no extra charge. Please send order, or SAE for catalogue, to:

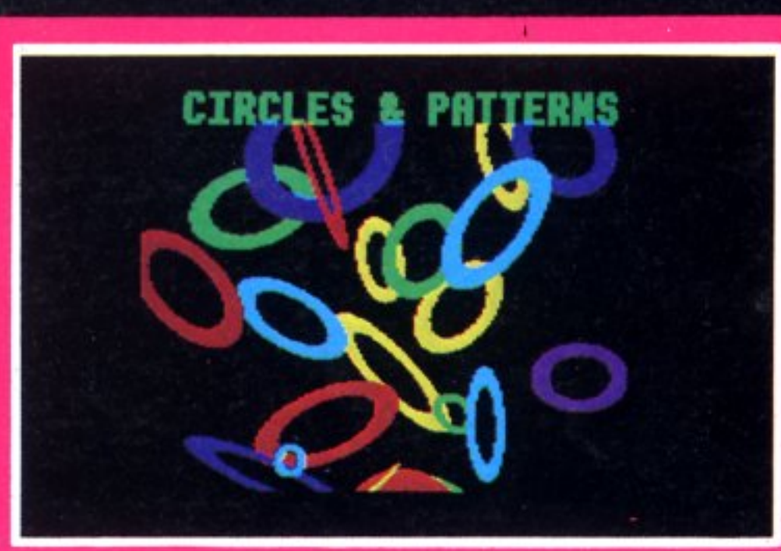
Software for the BBC micro

Graphics ROM



The Graphic Extension ROM

for the BBC Micro 32K

Our latest utility ROM includes over 28 new graphics related commands. These can be typed in like any normal commands and can of course, be included in BASIC programs. The commands are split into 3 distinct areas:-

1. Sprite graphics
   These are multi-coloured shapes up to 24 x 24 pixels in size.
   Once a sprite has been designed (using in-built routine) it can be plotted at any position on the screen and easily moved around. A sprite can also be part of a 'film' — a sequence of frames allowing animation.Up to 32 sprites or 'films' can be active on the screen at any time. A 'film' can contain up to 47 frames, each frame being any sprite image.

2. LOGO 'turtle' graphics
   By using simple FORWARD, BACKWARD, LEFT and RIGHT commands a 'turtle' can be moved very quickly around the screen, producing intricate patterns by the most user-friendly means. Including these commands in structured BBC BASIC programs provides a system faster and more powerful than many of the packages currently used to demonstrate the LOGO language.

3. The third section consists of a large number of general purpose commands, such as:-
   ★FILL which will fill ANY area on screen.
   Fast circle and arc drawing
   3D graphics routines allowing X, Y, Z co-ordinate plotting
   Large character printing in a range of patterns
   Scaling — allowing any part of the screen to be expanded or diminished
   A rotate command that will rotate all plotting by any angle around the origin
   Because this is a ROM, all the commands are instantly available, and has a built-in help menu showing the syntax of all commands. Supplied with a comprehensive manual and step-by-step fitting instructions, suitable even for the inexperienced. This ROM represents extremely good value for money.

Available directly from us, mail order only, or from all good dealers

£28.00 plus £1.00 p&p plus VAT

CASH OR ROYALTIES. We specialise in quality software for the BBC machine and can offer the best rates around. We are always interested in obtaining new programs to add to our range and offer either a cash payment for the outright purchase or alternatively pay a royalty on each one sold.
