ABCDir

Although a directory utility on the Amiga wasn't a new idea, and there were several around, none of them were what directory utility should be. Some had power but lacked flexibility, others were flexible but forgot how to be intuitive, and still others were intuitive, flexible and powerful, but were spread over ten thousand screens and buttons. So here is ABCDirectory, an extremely powerful file manipulation utility under a simple and integrated roof. Some features include: It makes good use of those filenotes (comments). While the mouse moves over entries, their comments can be displayed on the error/info line. So comment all of your files & NEVER EVER be left wondering: -what's this file again?. An infinite number of uses can be extrapolated from the simple recognition system ABCDirectory uses which makes it _very_ versatile. Treat LHA archives as if they were directories. It's simple to use and very functional, hence the ABC. Most of its gadgets are at the top of the display so you won't have to move your mouse up & down the screen like madman. No pixel is left to chance. It's QUICK!QUICK!QUICK! It has online help (file ABCDir.help) for its neat. It has a smart remembered and buffered dirs. It's intuitive as hell (or something in that vicinity). It has kling klang kabang kool scrolling (if you have the req.library installed of course..) The progress of commands that go into recursive directories can actually BE SEEN. This means that you don't only see the name of files being copied, but that you see the loaded directory with all the entries selected & then successively deselected & acted upon.
ON DISK: Wow.

Amiga Real Time Monitor

Ever wondering what was going on inside your Amiga. It has so many different systems and chips running at the same time. It's hard to figure it all out. Well, how would you like to see it ALL at a glance, all at the same time? If you need more memory, you can look through to see if there are strange libraries or fonts you may not need. You can easily remove them. ARTM displays and controls activities in your Amiga. It is full supported by Intuition and it is very easy to use. ARTM will display all the Tasks operating, and you can select or remove them. All open screens and Windows are also displayed. All libraries and versions are displayed. This way you can check to see if you have the latest versions running. Lets not forget al the devices and drive. You can control the priorities. Also in control are all your ASSIGNS, Fonts, Libraries, memory, and much, much more.
ON DISK: A Little Control

CShell

CShell provides a convenient AmigaDOS alternative command interface. All its commands are internal and thus it does not rely on the c: commands for any functionality. Major features include: freely programmable command line editing, simple history, piping, aliases with arguments, variables & variable handling (embedded variables), file name expansion via wild carding ('?', '*' and more), conditionals (if/else etc..), source files (w/ gotos and labels), tab file name completion, object oriented features (file classes, actions), many built in commands to speed things up, and more.
ON DISK: An Alternative To The Old CLI

DiskEditor

Did you ever want to see what a program looks like before you load it into memory? You can see hidden messages, and unusual text entries. If it is a game, they could give you clues. Or if you are just curious about looking at, and learning about your floppy and hard drives, then this program will allow you to explore. This disk editor (nickname 'DED') allows you to: Edit sectors on disk in binary form or in DOS structures (including bitmap), Find file of FFS datablock, Scan for DOS structure references to any block, Edit rigid disk blocks in structure form, Export or import bytes from/to disk, All sectors are not written to the disk, but they are left in memory until you ask DED to write them. But if you change anything, ALL functions will access modified sectors in memory and not the original, ones on the disk - you may try to do anything without risking integrity of your disk. All menuitems have help, Built-in calculator, which you can use in every number gadget and more!

SAnim

You've just created what could be your best animation yet. You want to show it off, or have it easy to view. You could store it in a compressed format to save space. But then you would have to uncompress it to view. Not very convenient. Then you would have to include a display program. Now there is a better alternative. With this updated utility, you could create a self displaying animation, that is compressed! You don't need a display program, just click on the icon and poof! A must for any animator!
ON DISK: Easy Animation

EconKnow

In today's economic times, more than ever, knowledge is critical. This program can answer most of your economic questions. Whether you are interested in buying or refinancing your home, what your savings or investments will really be worth in the future and more. EconKnow, is a financial program containing the following functions: Investment Section: (future value of an investment, future value of regular deposits (Annuity), regular deposits, regular withdrawals from an investment, initial investment, minimum investment for withdrawals, interest rate on investment). The Loan Section: (loan payment, original principal of a loan, original term of a loan, interest rate on a loan, remaining balance on a loan). The Cost Section: (equivalent annual cost, present worth, equal series present worth) and much more!
ON DISK: A Little Knowledge, A Lot Of Power

Fighter

In the arena its just you against him. All that training, and your arsenal finally includes: blocks, sweeps, roundhouse, front and flying kicks, jabs, punches, knee slams, elbow punches and more. Then as you progress in battle you can learn new special techniques! But don't forget, each new opponent gets more and more skilled. So you must constantly hone your skills also. So with fighter, its do or die- so you better do.
ON DISK: A Superb Fighting Simulation

Moontool V1.1

Whether you are interested in the effects of the moon on tides, fishing, hunting, astronomy, star gazing or just have a local Wearwolf to contend with, this program will give you a wealth of information to track the moon's phases. Moontool gives you a variety of statistics about the moon, including phase, distance, angular, size and time to next full moon. A schematic of the current phase is also shown as a picture. This is illustrative only; the accurate phase is shown in the text.
ON DISK: Phase Results

QuickFile

This is a flexible, fast and easy to use flat file database using random access with intelligent buffering to minimize disk access, multiple indexes for fast access to records; form and list style screens and reports, and fast sorting and searching. Files are quickly and easily defined, and fields can be added, changed or deleted at any time. Two demonstration databases are provided to get you started.

AmigaReport

Atari Ships $250 Jaguar System, 3DO Maker of a competing Multimedia CD Player Posts $7 Million Quarterly Loss, Japan's Computer Shipments Down, IBM to Shrink Computers, Okidata Introduces New 600 dpi-class Printer, Sound Blaster Owner Sues Covox Inc., COMDEX News, The Online Future, Commodore Announces Another Loss, New Hard Drive Expansion for Amiga 600/1200, Plus More!

Virus Killers

In each issue we always include the latest virus killers and detectors. As you know, the best protection is prevention. The included utilities can help you detect and destroy that virus on one of your disks before it has a chance to infiltrate your entire disk collection. Add these utilities to your collection, or update your collection with the latest versions and keep it safe. Prevention is always the best medicine.
ON DISK: Virus Killer Programs

Hot Soundtrack

I've heard people claim that with new soundboards the IBM can play some really good music. Well, they just haven't heard the Amiga yet. That's all there is too it. Crank up this tune, turn up your monitor volume, and invite all your PC friends over to have a listen. This will be sure to convince them.
