BOOK REVIEW

Cell Growth and Oncogenesis

(P. Bannasch, D. Kanduc, S. Para, J. M. Tager, eds., Birkhauser Verlag, Basel-Berlin-Boston, 1998, 328 p.)

Rapid progress has been made in our understanding of the molecular mechanisms of cell growth and oncogenesis during the past decade. This book comprises recent results on the regulation of cell growth in normal and neoplastic tissues by growth factors including hormones, and by the activation of oncogenes and tumor suppressor genes, respectively. Special attention has been given to the presentation of the frequently neglected close correlation between changes in signal transduction and metabolic pathways during oncogenesis.
