The Solution Structure of a Cardiac Troponin C–Troponin I–Troponin T Complex Shows a Somewhat Compact Troponin C Interacting with an Extended Troponin I–Troponin T Component, by William T. Heller, Ekram Abusamhadneh, Natosha Finley, Paul R. Rosevear, and Jill Trewheella*, Volume 41, Number 52, December 31, 2002, pages 15654–15663.

Pages 15659–15661. Figures 7–9 and 11 are not properly scaled relative to one another, as suggested in the legend of Figure 7. The approximate scaling, if Figure 7 is 100%, would be 107, 86, and 91% for Figures 8, 9, and 11, respectively. The best comparisons can be made, however, by retrieving the coordinates for the consensus envelope models given in the Supporting Information for this paper at <http://pubs.acs.org>.
