

SUBJECT INDEX

- Amino acid transferring systems
 Stimulating effect of low pH on the ——— of the small intestine (Thompson et al.) (196) 120
- p*-Aminohippurate
 Kinetic parameters of renal transport of ——— in vitro (Sheikh, Møller) (196) 305
- D-Arabinose
 ——— influx across the brush border of rabbit ileum (Schultz, Yu-Tu) (196) 351
- ATP
 Effect of externally added ——— on glucose uptake by isolated rat soleus muscle (Chaudry, Gould), (196) 327
- ATP
 Evidence for the uptake of ——— by rat soleus muscle in vitro (Chaudry, Gould), (196) 320
- ATPase
 Studies on ——— in sheared micro vesicles of human erythrocyte membranes (Schrier et al.), (196) 263
- ATPase activity
 Some characteristics of a calcium-dependent ——— associated with a group of erythrocyte membrane proteins which form fibrils (Rosenthal et al.), (196) 254
- Bicarbonate
 Effects of carbon dioxide and ——— on chloride fluxes across frog gastric mucosa (Imamura) (196) 245
- Bimolecular phospholipid membranes
 Charged and neutral ion carriers through ——— (Liberman et al.) (196) 221
- Calcium-dependent ATPase
 Some characteristics of a ——— activity associated with a group of erythrocyte membrane proteins which form fibrils (Rosenthal et al.) (196) 254
- Carbon dioxide
 Effects of ——— and bicarbonate on chloride fluxes across frog gastric mucosa (Imamura) (196) 245
- Cardiolipin liquid-crystalline vesicles
 Studies on model membranes. I. Effects of Ca^{2+} and antibiotics on permeability of ——— (Saha et al.) (196) 10
- Cell walls
 Comparative study of the ——— of trans-formable mutants of *Micrococcus lysodeikticus* (Kenig-Vakshal et al.) (196) 107
- Chloride fluxes
 Effects of carbon dioxide and bicarbonate on ——— across frog gastric mucosa (Imamura) (196) 245
- Choline accumulation
 ——— by the rat diaphragm (Adamič) (196) 113
- Copper
 Effect of ——— on membrane enzymes (Bowler, Duncan) (196) 116
- N-N'-Dicyclohexylcarbodiimide
 Transmembrane pH gradient in *Streptococcus faecalis*: Origin, and dissipation by proton conductors and ——— (Harold et al.) (196) 235
- Dimethyl adipimidate
 Cross-linking of erythrocyte membranes with ——— (Niehaus Jr., Wold) (196) 170
- Drug transport
 ———. II. The effect of various cations on the passive transfer of drugs across the everted rat intestine (Mayersohn, Gibaldi) (196) 296
- Endoplasmic reticulum
 Control of fatty acid composition in glycerolipids of the ——— (Ellingson et al.) (196) 176
- Erythrocyte glycolysis
 Relationship of solute permeability to ——— (Tsuboi, Fukunaga) (196) 215
- Erythrocyte membranes
 Cross-linking of ——— with dimethyl adipimidate (Niehaus Jr., Wold) (196) 170
- Erythrocyte membranes
 Studies on ——— in sheared micro vesicles of human ——— (Schrier et al.) (196) 263
- Erythrocyte membrane proteins
 Some characteristics of a calcium-dependent ATPase activity associated with a group of ——— which form fibrils (Rosenthal et al.) (196) 254
- Erythrocyte volume
 Perturbation of ———: Rectification of osmotic flow (Farmer, Macey) (196) 53
- [2-O-Ethyltyrosin]oxytocin
 Inhibition of oxytocin effects on frog skin and bladder by ——— (Jard et al.) (196) 85
- Fatty acid
 Control of ——— composition in glycerolipids of the endoplasmic reticulum (Ellingson et al.) (196) 176
- Ferritin-antibody
 Localization of rabbit intestinal sucrase with ——— conjugates (Gitzelmann et al.) (196) 20
- Fibroblasts
 Isolation and characterization of the plasma membrane from chick embryo ——— (Perdue, Sneider) (196) 125
- Galactosides

- Counterflow of ——— in *Escherichia coli* (Wong, Wilson) (196) 336
- Gastric mucosa
Effects of carbon dioxide and bicarbonate on chloride fluxes across frog ——— (Imamura) (196) 245
- Glucose uptake
Effect of externally added ATP on ——— by isolated rat soleus muscle (Chaudry, Gould) (196) 327
- Glycerolipids
Control of fatty acid composition in ——— of the endoplasmic reticulum (Ellingson et al.) (196) 176
- Glycolysis
Relationship of solute permeability to erythrocyte ——— (Tsuboi, Fukunaga) (196) 215
- Intestine
Drug transport. II. The effect of various cations on the passive transfer of drugs across the everted rat ——— (Mayersohn, Gibaldi) (196) 296
- Ion carriers
Charged and neutral ——— through bimolecular phospholipid membranes (Liberman et al.) (196) 221
- Ion movements
——— and thiamine. II. The release of the vitamin from membrane fragments (Itokawa, Cooper) (196) 274
- Ion transport
——— and water transport in Limonium. III. Time constants of the transport system (Hill) (196) 66
- Ion transport
——— and water transport in Limonium. IV. Delay effects in the transport process (Hill) (196) 73
- Lecithin systems
Molecular interactions in mixed ——— (Phillips et al.) (196) 35
- Lipid bilayer membranes
Thickness changes in ——— (White) (196) 354
- Membranes
Isolation and characterization of the ——— from *Rhodospirillum rubrum* (Ketchum, Holt) (196) 141
- Membranes
Novel protoplast-bursting factor (surfactin) obtained from *Bacillus subtilis* IAM 1213. II. The interaction of surfactin with bacterial ——— and lipids (Tsukagoshi et al.) (196) 211
- Membranes
Studies on model ———. I. Effects of Ca^{2+} and antibiotics on permeability of cardiolipin liquid-crystalline vesicles (Saha et al.) (196) 10
- Membranes
Thickness changes in lipid bilayer ——— (White) (196) 354
- Membrane enzymes
Effect of copper on ——— (Bowler, Duncan) (196) 116
- Membrane enzymes
Solubilization and gel electrophoresis of ——— by use of detergents (Dulaney, Touster) (196) 29
- Membrane permeability
Effect of infection with RNA phage R23 on ——— and potassium fluxes in *Escherichia coli* (Watanabe, Watanabe) (196) 80
- Micellar solubilization
Relationship between in vitro uptake of oleic acid and ——— (Hoffman) (196) 193
- Micrococcus lysodeikticus
Comparative study of the cell walls of transformable mutants of ——— (Kenig-Vakshal et al.) (196) 107
- Mitochondrial membranes
Composition of phospholipids in outer and inner ——— from guinea pig liver (Parkes, Thompson) (196) 162
- Model membranes
Studies on ———. I. Effects of Ca^{2+} and antibiotics on permeability of cardiolipin liquid-crystalline vesicles (Saha et al.) (196) 10
- Molybdenum
Specificity transport processes for sulphur, selenium, and molybdenum anions by filamentous fungi (Tweedie, Segel) (196) 95
- Noradrenaline
Role of internal and external Na^+ and K^+ on the uptake of $[^3\text{H}]$ ——— by synaptosomes prepared from rat brain (White, Keen) (196) 285
- Oleic acid
Relationship between in vitro uptake of ——— and micellar solubilization (Hoffman) (196) 193
- Osmotic behaviour
Apparent nonsolvent water and ——— of yeast cells (De Bruijne, Van Steveninck) (196) 45
- Oxytocin
Inhibition of ——— effects on frog skin and bladder by $[2\text{-O-ethyltyrosin}]$ oxytocin (Jard et al.) (196) 85
- pH gradient
Transmembrane ——— in *Streptococcus faecalis*: Origin, and dissipation by proton conductors and N, N' -dicyclohexylcarbodiimide (Harold et al.) (196) 235
- Phage R23
Effect of infection with RNA ——— on membrane permeability and potassium fluxes in *Escherichia coli* (Watanabe, Watanabe) (196) 80
- Phospholipid membranes
Charged and neutral ion carriers through bimolecular ——— (Liberman et al.) (196) 221
- Phospholipids
Composition of ——— in outer and inner mitochondrial membranes from guinea pig liver (Parkes, Thompson) (196) 162

- Plasma membrane
Isolation and characterization of the ———
from chick embryo fibroblasts (Perdue,
Sneider) (196) 125
- Plasma membrane
Modified method for the isolation of the
——— from rat liver (Ray) (1961)
- Potassium fluxes
Effect of infection with RNA phage R23
on membrane permeability and ——— in
Escherichia coli (Watanabe, Watanabe)
(196) 80
- Proline transport
——— into isolated rat glomeruli (Mackenzie,
Scriver) (196) 110
- Proton conductors
Transmembrane pH gradient in *Streptococcus faecalis*: Origin, and dissipation by
——— and N, N'-dicyclohexylcarbodiimide
(Harold et al.) (196) 235
- Protoplast-bursting factor
Novel ——— (surfactin) obtained from
Bacillus subtilis IAM 1213. I. The effects of
surfactin on *Bacillus megaterium* KM
(Tsukagoshi et al.) (196) 204
- Protoplast-bursting factor
Novel ——— (surfactin) obtained from
Bacillus subtilis IAM 1213. II. The interaction
of surfactin with bacterial membranes
and lipids (Tsukagoshi et al.) (196) 211
- Renal transport
Kinetic parameters of ——— of p-amino-
hippurate in vitro (Sheikh, Møller) (196) 305
- Rhodospirillum rubrum*
Isolation and characterization of the mem-
branes from ——— (Ketchum, Holt) (196)
141
- Selenium
Specificity of transport processes for sulphur,
———, and molybdenum anions by filamentous
fungi (Tweedie, Segel) (196) 95
- Sodium and potassium
Role of internal and external ——— on the
uptake of [^3H]noradrenaline by synap-
tosomes prepared from rat brain (White,
Keen) (196) 285
- Soleus muscle
Evidence for the uptake of ATP by rat
——— in vitro (Chaudry, Gould) (196) 320
- Soleus muscle
Effect of externally added ATP on glucose
uptake by isolated rat ——— (Chaudry,
Gould) (196) 327
- Solute permeability
Relationship of ——— to erythrocyte
glycolysis (Tsuboi, Fukunaga) (196) 215
- Sucrase
Localization of rabbit intestinal ———
with ferritin-antibody conjugates (Gitzel-
mann et al.) (196) 20
- Sulphur
Specificity of transport processes for ———,
selenium, and molybdenum anions by
filamentous fungi (Tweedie, Segel) (196) 95
- Surfactin
Novel protoplast-bursting factor (———)
obtained from *Bacillus subtilis* IAM 1213.
I. The effects of surfactin on *Bacillus mega-*
terium KM (Tsukagoshi et al.) (196) 204
- Surfactin
Novel protoplast-bursting factor (———)
obtained from *Bacillus subtilis* IAM 1213.
II. The interaction of surfactin with bac-
terial membranes and lipids (Tsukagoshi et
al.) (196) 211
- Synaptosomes
Role of internal and external Na^+ and K^+
on the uptake of [^3H]noradrenaline by
——— prepared from rat brain (White,
Keen) (196) 285
- Thiamine
Ion movements and ———. II. The release
of the vitamin from membrane fragments
(Itokawa, Cooper) (196) 274
- Transport processes
Specificity of ——— for sulphur, selenium,
and molybdenum anions by filamentous
fungi (Tweedie, Segel) (196) 95
- Water transport
Ion transport and ——— in Limonium.
III. Time constants of the transport system
(Hill) (196) 66
- Water transport
Ion transport and ——— in Limonium. IV.
Delay effects in the transport process (Hill)
(196) 73
