

Subject Index to Volume 66

ABEI

- Detection of DNA hybridization by ABEI electrochemiluminescence in DNA-chip compatible assembly (66) 139

Acid chloride adlayer

- Spectroscopic and electrochemical characterization of interfacial biomimetic assemblies on electrochemically generated gold oxide surfaces (66) 71

Adsorption

- DNA imaged on a HOPG electrode surface by AFM with controlled potential (66) 117

Atomic force microscopy (AFM)

- DNA imaged on a HOPG electrode surface by AFM with controlled potential (66) 117

Alkanethiol self-assembled monolayers

- Direct electrochemistry of heme multicofactor-containing enzymes on alkanethiol-modified gold electrodes (66) 55

Antibodies

- Antibody immobilisation on the metal and silicon surfaces. The use of self-assembled layers and specific receptors (66) 111

Bioelectrochemistry

- TiO₂ phytate films as hosts and conduits for cytochrome *c* electrochemistry (66) 41

Biomimetic interfaces

- Design, synthesis and characterization of monomolecular interfacial layers (66) 9

Biosensors

- Antibody immobilisation on the metal and silicon surfaces. The use of self-assembled layers and specific receptors (66) 111
- Direct immobilisation of DNA probes for the development of affinity biosensors (66) 129

Chemically modified electrode

- Immobilization and electrochemical redox behavior of cytochrome *c* on fullerene film-modified electrodes (66) 35

Cholesterol oxidase oxygen sensing

- Modified electrodes based on lipidic cubic phases (66) 3

Chromophore arrays

- Design, synthesis and characterization of monomolecular interfacial layers (66) 9

Conditioning

- The effect of support material and conditioning on wettability of PAH/PSS multilayer films (66) 65

Covalent attachment

- Surface immobilized optical probes: pyrene molecules covalently attached to silica and indium-doped tin oxide (66) 89

Cytochrome *c*

- Electrochemistry of cytochrome *c* incorporated in Langmuir–Blodgett films of Nafion® and Eastman AQ 55® (66) 29
- Immobilization and electrochemical redox behavior of cytochrome *c* on fullerene film-modified electrodes (66) 35
- TiO₂ phytate films as hosts and conduits for cytochrome *c* electrochemistry (66) 41

Detection

- Detection of DNA hybridization by ABEI electrochemiluminescence in DNA-chip compatible assembly (66) 139

Differential pulse amperometry

- Electrochemical nitric oxide sensor preparation: a comparison of two electrochemical methods of electrode surface modification (66) 105

Diffusion coefficient

- Modified electrodes based on lipidic cubic phases (66) 3

Direct electron transfer

- Direct electrochemistry of heme multicofactor-containing enzymes on alkanethiol-modified gold electrodes (66) 55

DNA

- DNA imaged on a HOPG electrode surface by AFM with controlled potential (66) 117
- Detection of DNA hybridization by ABEI electrochemiluminescence in DNA-chip compatible assembly (66) 139

DNA electrochemical biosensor

- Kinetic study of the degradation of a potential local anesthetic drug in serum using the DNA-based electrochemical biosensor (66) 125

DNA probes

- Direct immobilisation of DNA probes for the development of affinity biosensors (66) 129

DP voltammetry

- Kinetic study of the degradation of a potential local anesthetic drug in serum using the DNA-based electrochemical biosensor (66) 125

Drug degradation

- Kinetic study of the degradation of a potential local anesthetic drug in serum using the DNA-based electrochemical biosensor (66) 125

ECL

- Detection of DNA hybridization by ABEI electrochemiluminescence in DNA-chip compatible assembly (66) 139

Electrocatalysis

- Electrochemical nitric oxide sensor preparation: a comparison of two electrochemical methods of electrode surface modification (66) 105

Electron hopping

- TiO₂ phytate films as hosts and conduits for cytochrome *c* electrochemistry (66) 41

Encapsulation

- Integrated circuits protection with the Langmuir–Blodgett Films (66) 49

D-fructose dehydrogenase

- Direct electrochemistry of heme multicofactor-containing enzymes on alkanethiol-modified gold electrodes (66) 55

Fullerene-modified electrode

- Immobilization and electrochemical redox behavior of cytochrome *c* on fullerene film-modified electrodes (66) 35

- Heme
Direct electrochemistry of heme multifactor-containing enzymes on alkanethiol-modified gold electrodes (66) 55
- HOPG
DNA imaged on a HOPG electrode surface by AFM with controlled potential (66) 117
- IC protection
Integrated circuits protection with the Langmuir–Blodgett Films (66) 49
- Immobilisation
Antibody immobilisation on the metal and silicon surfaces. The use of self-assembled layers and specific receptors (66) 111
- Immobilisation procedure
Direct immobilisation of DNA probes for the development of affinity biosensors (66) 129
- Interphase region
Integrated circuits protection with the Langmuir–Blodgett Films (66) 49
- Ion exchange
Electrochemistry of cytochrome *c* incorporated in Langmuir–Blodgett films of Nafion® and Eastman AQ 55® (66) 29
Ion equilibrium in lichen surrounding (66) 95
- Ionic equilibrium
Ion equilibrium in lichen surrounding (66) 95
- Laccase
Modified electrodes based on lipidic cubic phases (66) 3
- Langmuir–Blodgett (LB) films
Electrochemistry of cytochrome *c* incorporated in Langmuir–Blodgett films of Nafion® and Eastman AQ 55® (66) 29
Integrated circuits protection with the Langmuir–Blodgett Films (66) 49
- Layer-by-layer films
Polyoxometallates as inorganic templates for electrocatalytic network films of ultra-thin conducting polymers and platinum nanoparticles (66) 79
- Lectins
Antibody immobilisation on the metal and silicon surfaces. The use of self-assembled layers and specific receptors (66) 111
- Lichenoidication
Ion equilibrium in lichen surrounding (66) 95
- Lichens
Ion equilibrium in lichen surrounding (66) 95
- Lipid bilayer
Surface immobilized optical probes: pyrene molecules covalently attached to silica and indium-doped tin oxide (66) 89
- Lipidic cubic phase
Modified electrodes based on lipidic cubic phases (66) 3
- Local anesthetics
Kinetic study of the degradation of a potential local anesthetic drug in serum using the DNA-based electrochemical biosensor (66) 125
- Lyotropic liquid crystals
Modified electrodes based on lipidic cubic phases (66) 3
- Manganese porphyrin
Electrochemical nitric oxide sensor preparation: a comparison of two electrochemical methods of electrode surface modification (66) 105
- Metal oxide
Spectroscopic and electrochemical characterization of interfacial biomimetic assemblies on electrochemically generated gold oxide surfaces (66) 71
- Microsystem technology
Microsystem technology as a road from macro to nanoworld (66) 23
- Monomolecular films
Design, synthesis and characterization of monomolecular interfacial layers (66) 9
- Nafion
Electrochemistry of cytochrome *c* incorporated in Langmuir–Blodgett films of Nafion® and Eastman AQ 55® (66) 29
- Nitric oxide
Electrochemical nitric oxide sensor preparation: a comparison of two electrochemical methods of electrode surface modification (66) 105
- Nitrite and bromate reduction
Polyoxometallates as inorganic templates for electrocatalytic network films of ultra-thin conducting polymers and platinum nanoparticles (66) 79
- Optical probe
Surface immobilized optical probes: pyrene molecules covalently attached to silica and indium-doped tin oxide (66) 89
- Orientation
Antibody immobilisation on the metal and silicon surfaces. The use of self-assembled layers and specific receptors (66) 111
- Oxygen reduction
Polyoxometallates as inorganic templates for electrocatalytic network films of ultra-thin conducting polymers and platinum nanoparticles (66) 79
- PAH/PSS films
The effect of support material and conditioning on wettability of PAH/PSS multilayer films (66) 65
- Passivation layer
Integrated circuits protection with the Langmuir–Blodgett Films (66) 49
- Phosphomolybdate
Polyoxometallates as inorganic templates for electrocatalytic network films of ultra-thin conducting polymers and platinum nanoparticles (66) 79
- Piezoelectric microgravimetry
Immobilization and electrochemical redox behavior of cytochrome *c* on fullerene film-modified electrodes (66) 35
- Polyelectrolyte self-assembly
Antibody immobilisation on the metal and silicon surfaces. The use of self-assembled layers and specific receptors (66) 111
- Polyestersulfonated
Electrochemistry of cytochrome *c* incorporated in Langmuir–Blodgett films of Nafion® and Eastman AQ 55® (66) 29
- Polypyrrole
Detection of DNA hybridization by ABEI electrochemiluminescence in DNA-chip compatible assembly (66) 139
- Process in Biochemistry
TiO₂ phytate films as hosts and conduits for cytochrome *c* electrochemistry (66) 41
- Pyrene
Surface immobilized optical probes: pyrene molecules covalently attached to silica and indium-doped tin oxide (66) 89
- Quartz crystal microbalance
Immobilization and electrochemical redox behavior of cytochrome *c* on fullerene film-modified electrodes (66) 35
- Self-assembled monolayer
Polyoxometallates as inorganic templates for electrocatalytic network films of ultra-thin conducting polymers and platinum nanoparticles (66) 79
- Self-assembly
Spectroscopic and electrochemical characterization of interfacial biomimetic assemblies on electrochemically generated gold oxide surfaces (66) 71
- Sensor
Detection of DNA hybridization by ABEI electrochemiluminescence in DNA-chip compatible assembly (66) 139

Sensors

TiO₂ phytate films as hosts and conduits for cytochrome *c* electrochemistry (66) 41

Serum

Kinetic study of the degradation of a potential local anesthetic drug in serum using the DNA-based electrochemical biosensor (66) 125

Stabilized platinum nanoparticles

Polyoxometallates as inorganic templates for electrocatalytic network films of ultra-thin conducting polymers and platinum nanoparticles (66) 79

Staphylococcal protein A

Antibody immobilisation on the metal and silicon surfaces. The use of self-assembled layers and specific receptors (66) 111

Support material

The effect of support material and conditioning on wettability of PAH/PSS multilayer films (66) 65

Surface characterization

Microsystem technology as a road from macro to nanoworld (66) 23

Surface immobilization

Immobilization and electrochemical redox behavior of cytochrome *c* on fullerene film-modified electrodes (66) 35

Surface plasmon resonance (SPR)

Antibody immobilisation on the metal and silicon surfaces. The use of self-assembled layers and specific receptors (66) 111

Surface transformation

Surface immobilized optical probes: pyrene molecules covalently attached to silica and indium-doped tin oxide (66) 89

Theophylline oxidase

Direct electrochemistry of heme multicofactor-containing enzymes on alkanethiol-modified gold electrodes (66) 55

Titania nanoparticles

TiO₂ phytate films as hosts and conduits for cytochrome *c* electrochemistry (66) 41

Transducers

Antibody immobilisation on the metal and silicon surfaces. The use of self-assembled layers and specific receptors (66) 111

Ultra-thin conducting polymers

Polyoxometallates as inorganic templates for electrocatalytic network films of ultra-thin conducting polymers and platinum nanoparticles (66) 79

Voltammetry

Electrochemistry of cytochrome *c* incorporated in Langmuir–Blodgett films of Nafion® and Eastman AQ 55® (66) 29
