

Announcement

Eighth International Congress on Photobiology
Sirasbourg - France
July 20–25, 1980

Tentative list of covered subjects

1. Spectroscopy. Fundamental aspects.
2. Photochemistry of proteins and nucleic acid-protein complexes.
3. Photochemistry of nucleic acids.
4. Repair of photochemical lesions. Radiation induced carcinogenesis. Genetic aspects.
5. Photosensitization. Action of endogeneous and exogeneous photosensitizers on skin. Biological effects of furocoumarins.
6. Phototherapy.
7. Effects of non ionizing radiations on retina and on transparent media of eye.
8. Bioconversion of solar energy. Fundamental mechanisms.
9. Photomorphogenesis. Non chlorophyllic pigments.
10. Photoperiodism. Circadian rhythms.
11. Environmental photochemistry. Photoproduction and photodegradation of pollutants.
12. Prebiotic photochemistry.
13. Comparative effects of ionizing and non ionizing radiations.
14. Photometry. Dosimetry.
