

## Letter to the Editor

**Retraction of the article "Protein dynamics by neutron scattering" published in Biophysical Chemistry 2013, 182, 16–22**

I hereby retract the article recently published in the SIBPA Special Issue of Biophysical Chemistry (Biophys. Chem. 2013, 182, 16–22). The retraction is meant to clear any potential infringement of the copyright held by the American Chemical Society, whose permission to re-use part of the material already published in the Journal of Physical Chemistry B paper signed by Magazu', Migliardo and myself (J. Phys. Chem. B 2011, 115, 7736–7743) based on my PhD thesis work, was not requested nor obtained. The article being retracted was an invited contribution from the SIBPA to recognize the award received for my PhD thesis work. It included material already contained in my thesis defended in

March 2011, and new data that I collected recently at the Institute Laue-Langevin in Grenoble, France. The retraction should in no way be construed as pertaining to the scientific validity of material presented in my thesis, previously published with Drs. Magazu' and Migliardo in the Journal of Physical Chemistry B, or collected recently at the Institute Laue-Langevin.
