

Page 119

Owing to an error in printing, one data point is missing from each of the lower traces in Fig. 4. These are the points from the background fluctuations that are mentioned in the caption, and correspond to the "thermal-noise spike" at $t_2 = t_1$, referred to in the text on that page. In Fig. 4 *A* the missing point occurs 24 ms from the start of the trace (corresponding to the square in the upper trace) and has an ordinate value of $2.7 \times 10^{-21} \text{ A}^2$. In part *B*, the coordinates are 0.9 ms and $3 \times 10^{-21} \text{ A}^2$.
