

Haugh, Jason M. 2002. *Biophys. J.* 82:591–604.

On p. 594, Table 1 is aligned incorrectly. The correct Table 1 is printed below.

**TABLE 1** Dimensionless model parameters

Parameter	Definition*		Brief description	Estimated range†
	Two-state	Regulated supply		
$\kappa$		$k_{\text{RE}}/D$	Enzyme reaction rate constant	$10^{-3} - 10^3$
$\eta_{\text{R}}$		$s^2 n_{\text{R}}$	Activated receptor density	$10^{-8} - 10^{-1}$
$\eta_{\text{RE}}$		$s^2 n_{\text{RE}}$	Receptor-enzyme density	$10^{-8} - 10^{-1}$
$\tau_{\text{RE}}$		$D t_{\text{RE}}/s^2$	Receptor-enzyme lifetime	$10 - 10^7$
Da	$(k_a + k_i)s^2/D$	$k_c s^2/D$	Bulk membrane rate constant	$10^{-7} - 10^{-1}$
$\beta$	0	$(n_{\text{RT}}/n_{\text{R}}) k_{\text{RT}}/s^2 R_{\text{T},0}$	Enhancement of substrate supply	No estimate

\*See Fig. 1 for illustrations of the various rate processes.

†Parameter ranges are calculated as follows:  $k_{\text{RE}}$  is estimated using a  $k_{\text{cat}}/K_{\text{M}}$  range of  $10^4 - 10^8 \text{ (Ms)}^{-1}$  and dividing by a confinement layer of  $\sim 3 - 10 \text{ nm}$ ;  $n_{\text{R}}$  and  $n_{\text{RE}}$  are estimated as  $1 - 10^6$  molecules in a  $10^3 - \mu\text{m}^2$  membrane; the rate constants  $k_i$ ,  $k_c$ , and  $t_{\text{RE}}^{-1}$  are given a range spanning  $0.01 - 100 \text{ s}^{-1}$ ; other estimates are  $s \sim 3 - 10 \text{ nm}$ ,  $D \sim 0.1 - 1 \mu\text{m}^2/\text{s}$ .

On p. 595, Eq. 14 is incorrect. The correct Eq. 14 is:

$$\alpha = \kappa \frac{\Psi_{\text{ss}}(1)}{\bar{\Psi}_{\text{ss}}} + \frac{8}{\pi \tau_{\text{RE}}} \left[ 1 - \frac{\beta \text{Da}^*}{\kappa(1 + \beta \eta_{\text{R}})} \right] \times \int_0^\infty \frac{[1 - e^{-(\lambda^2 + \text{Da}^*)\tau_{\text{RE}}}](\lambda^2 + \text{Da}^*)^{-2} \lambda \, d\lambda}{\left[ J_0(\lambda) + \frac{2\pi\lambda J_1(\lambda)}{\kappa} \right]^2 + \left[ Y_0(\lambda) + \frac{2\pi\lambda Y_1(\lambda)}{\kappa} \right]^2}. \quad (14)$$

On p. 598, Eq. 17 is incorrect. The correct Eq. 17 is:

$$\frac{\bar{n}_{\text{S}^*}}{n_{\text{S,tot}}} = \frac{k_a + k_{\text{RE}}^{\text{eff}} n_{\text{RE}}}{k_a + k_i + k_{\text{RE}}^{\text{eff}} n_{\text{RE}}} = \frac{\frac{k_a s^2}{D} + \alpha \eta_{\text{RE}}}{\text{Da} + \alpha \eta_{\text{RE}}}. \quad (17)$$

On p. 600, Eq. 18 is incorrect. The correct Eq. 18 is:

$$\frac{\text{rate}}{R_{\text{T},0}} = \alpha \eta_{\text{RE}} \bar{\Psi}_{\text{ss}}; \bar{\Psi}_{\text{ss}} = \frac{1 + \beta \eta_{\text{R}}}{\text{Da} + \alpha \eta_{\text{RE}}}. \quad (18)$$
