‘Metabolites of arachidonic acid formed by human gastrointestinal tissues and their actions on the muscle layers’ by A. Bennett, C.N. Hensby, G.J. Sanger & I.F. Stamford.

There are several errors in this paper. In the legend to Figure 2, concentrations should be $\mu\text{g/ml}$ bathing fluid, not ng/ml . In Table 1, the threshold concentration of PGI_2 for relaxation of the sigmoid colon should be 1000–10000 ng/ml . In Table 2, the threshold concentration of TxB_2 for contraction of the sigmoid colon should be 1000 ng/ml .
