**M. Watanabe, M. Yamada, S. Mue & K. Ohuchi** Enhancement by cyclo-oxygenase inhibitors of platelet-activating factor production in thapsigargin-stimulated macrophages

In the above article, Figure 1 was published incorrectly. The correct version is reproduced below.

**Figure 1** Effects of various concentrations of indomethacin on thapsigargin-induced accumulation of PAF and PGE<sub>2</sub> in rat peritoneal macrophages. Peritoneal macrophages ( $6 \times 10^6$  cells) were incubated at 37°C for 10 min in 4 ml of the medium containing thapsigargin (30 ng ml<sup>-1</sup>, 46.1 nM) and the indicated concentrations of indomethacin. PAF contents of cells (hatched columns) and PGE<sub>2</sub> concentrations (open columns) in the conditioned medium are shown. Values are the means from four samples with s.e.mean. The results were confirmed by three separate experiments. Statistical significance: \* $P < 0.05$ , \*\* $P < 0.01$ , \*\*\* $P < 0.001$  vs. thapsigargin alone.
