Endothelin receptors mediating contraction of rat and human pulmonary arteries: effect of chronic hypoxia in the rat

In Figure 2 of the above paper the key was incorrectly printed. The correct version appears below:

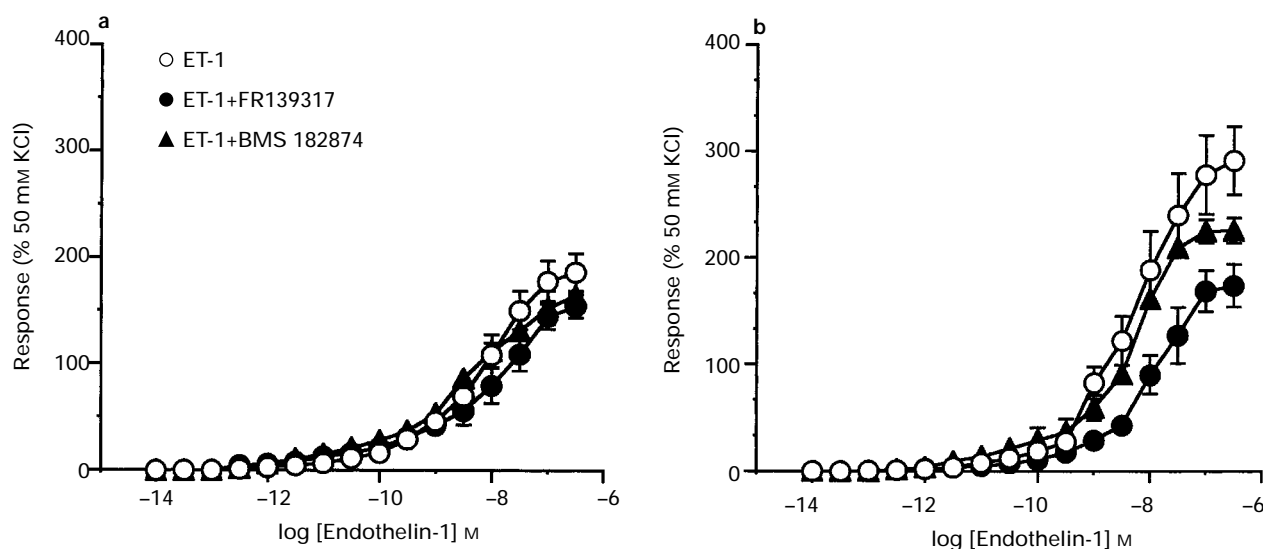

Figure 2 Effect of FR139317 and BMS 182874 on responses to endothelin-1 (ET-1) in rat pulmonary resistance arteries. Responses to ET-1 in control rat vessels (a) and chronically hypoxic rat vessels (b). ET-1 ($n=8$ (a and b)), ET-1 in the presence of $1 \mu\text{M}$ FR139317 ($n=6$ (a and b)), and ET-1 in presence of $1 \mu\text{M}$ BMS 182874 ($n=5$ (a and b)). Data are expressed as percentage of reference contraction to 50 mM KCl in each vessel. n =number of animals. Each point represents the mean and vertical lines show s.e.mean.
