A CAMAC GLOSSARY

PREFACE

This glossary is published as a supplement to the CAMAC Bulletin in the expectation that it will lead to a better understanding of CAMAC.

The definitions and translations represent the opinions of individual experts working in the CAMAC area and are not formal statements by the ESONE or NIM Committees or the Commission of the European Communities.

The CAMAC Specifications^{1,2} include full formal definitions of the terms shown in bold italic type in this glossary. It is not intended that the informal definitions in the glossary should modify or supersede the formal definitions in the specifications.

CAMAC

A CAMAC GLOSSARY

by

R.C.M. BARNES

ATOMIC ENERGY RESEARCH ESTABLISHMENT, HARWELL, ENGLAND

with translations by

P. Gallice (French)
H. Klessmann and H. Pangritz (German)
B. Rispoli and E. de Agostino (Italian)

ABSTRACT

This glossary covers specialized technical terms used in connexion with the CAMAC standards for modular data handling equipment. For each term there is an informal definition, and the term is translated into French, German and Italian.

July 1973

Contents

	Page No.
1. Names	5
2. Defined Structure of CAMAC	5
3. Dataway Organization	8
4. Branch Organization	11
5. General Terms in the Context of CAMAC*	12
6. Other Specialized and Non-CAMAC Terms	14
7. References	16
Index	17

** In this glossary the definitions of some well-known and widely-used terms reflect a particular shade of meaning in the context of CAMAC.*

1. NAMES

- 101 **CAMAC**
CAMAC
CAMAC
CAMAC
- 102 **JANUS (IANUS)**
- 111 **ESONE**
ESONE
ESONE
ESONE
- 112 **ESONE Members**
Membres du Comité ESONE
ESONE Mitglieder
Membri ESONE
- 113 **Executive Group (XG)**
Groupe exécutif (ESONE)
Executive Group (ESONE)
Gruppo Esecutivo (ESONE)
- 114 **ESONE Working Groups**
Groupes de travail ESONE
ESONE Arbeitsgruppen
Gruppi di lavoro ESONE
- 121 **CAMAC Bulletin**
Bulletin CAMAC
CAMAC Bulletin
Bolletino CAMAC
- 141 **NIM**
NIM
NIM
NIM
- 151 **European Communities**

Kommission der Europäischen
Gemeinschaften
Commissione delle Comunità Europee
- 152 **EURATOM**
Euratom
Euratom
Euratom

2. DEFINED STRUCTURE OF CAMAC

- 201 **Crate**
Châssis
Rahmen
Contenitore
- 202 **Dataway**
Interconnexion (avec I majuscule)
Datenweg
Interconnessione

- 203 **Plug-in Unit** – General term for CAMAC units, including modules and controllers.
 Tiroir
 Einschub-Einheit
 Cassetto modulare
- 204 **Module** – A particular class of controlled CAMAC plug-in units, mounted in one or more normal stations.
 Tiroir
 Module
 Modulo
- 205 **Controller** – A particular class of CAMAC plug-in units, mounted in the control station and one or more normal stations of a CAMAC crate.
 (*Crate Controller*)
 (*Dataway Controller*)
 Contrôleur
 (Contrôleur de châssis)
 (Contrôleur d'Interconnexion)
 Steuerung
 (Rahmensteuerung)
 (Datenwegsteuerung)
 Modulo di controllo
 (Modulo di controllo del contenitore)
 (Modulo di controllo dell'interconnessione)
- 211 **Normal Station** – One of the mounting positions for plug-in units in the CAMAC crate, giving access to the Dataway, including the data lines.
 Station normale
 Normale Station
 Stazione normale
- 212 **Control Station** – The right-hand mounting position in a CAMAC crate, with access to the Dataway, including all Station Number and Look-at-Me lines but not the data lines.
 Station de contrôle
 Steuerstation
 Stazione di Controllo
- 213 **Dataway Connector** – The 86-way plug and socket by which CAMAC modules and controllers are connected to the Dataway at stations in the crate.
 Connecteur pour l'Interconnexion
 Datenwegsteckverbindung
 Connettore dell'interconnessione
- 214 **Bus-line** – A signal or power line joining corresponding contacts at each Dataway connector socket (or at only the normal stations).
 Ligne omnibus
 Sammelleitung
 Linea omnibus
- 215 **Individual Line** – A line joining one contact at the Dataway control station to a contact at one normal station. Used for N and L lines.
 Ligne individuelle
 Individuelle Leitung, Stichleitung
 Linea individuale
- 216 **Free Bus-Lines** – Two additional free-use bus-lines (P1, P2) linking all normal Dataway stations (introduced in 1972 revision in place of individual patch contacts P1 and P2).
 Lignes omnibus libres
 Freie Sammelleitungen
 Linee omnibus libere
- 217 **Patch Contacts** – Individual free-use contacts at each Dataway station (P3, etc).
 Contacts accessoires
 Sonderstifte
 Terminali per connessioni facoltative
- 218 **Patch Connections** – Free-use interconnections involving the patch contacts.
 Connexions accessoires
 Sonderverbindungen
 Connessioni facoltative

- 219 **Patch Points** — Access points for patch connections, avoiding the need for connecting directly to the pins of the Dataway connector.
- Points de connexions accessoires
Anschlußstifte
Punti di attacco per connessioni facoltative
- 220 **Pull-up** — [CAMAC Dataway]—a means of biasing each signal line to '0' state in absence of '1' signals.
- Polarisation
Pull-up
Ripristino
- 231 **Mandatory Power Lines** — Bus-lines in the Dataway for +24V, +6V, 0V, -6V and -24V. These are normally powered in CAMAC systems.
- Lignes d'alimentation Obligatoires
Zwingend vorgeschriebene Versorgungsleitungen
Linee di alimentazione obbligatorie
- 232 **Additional Power Lines** — Bus-lines in the Dataway. These must be wired, but need not be powered unless required for use.
- Lignes d'alimentations accessoires
Zusätzliche Versorgungsleitungen
Linee di alimentazione ausiliarie
- 251 **Branch** — An assembly of up to seven crates and a branch driver, interconnected by sections of branch highway.
- Branche
Branch
Diramazione (o ramo)
- 252 **Branch Highway** — The multi-wire digital highway interconnecting the crate controllers and branch driver in a CAMAC branch.
- Interconnexion de branche
Branch Highway
Collegamento del ramo principale
- 253 **Branch Highway Ports** — The access points at which crate controllers and branch drivers are joined to the branch highway through Hughes connectors.
- Point de raccordement de l'interconnexion de branche
Branch-Nahtstelle
Aree di raccordo (terminali) per il collegamento del ramo principale
- 254 **Crate Controller Type A** — A crate controller with branch highway ports and a specified set of features (see Appendix 1 of EUR4600). The designation 'CCA-1' implies conformity with EUR4600, and 'CCA' implies conformity with either EUR4600 or preliminary issues of that specification.
- Contrôleur de châssis type A
Rahmensteuerung Typ A
Modulo di controllo tipo A
- 255 **Branch Driver** — A unit that communicates via the branch highway with up to seven crates. It may be integral with a branch controller or may merely be one branch interface forming part of a system controller.
- Commande de branche
Branch-Treiber
Elemento di comando della diramazione
- 256 **LAM Grader** — A unit that selects, rearranges or combines the Dataway L signals within one crate to form a set of Graded-L signals (for example associated with Crate Controller Type A).
- Tiroir de conditionnement des appels
Anforderungs-Sortiereinheit
Elemento di condizionamento dei richiami
- 261 **Termination** — [CAMAC Branch Highway] a combined pull-up current source to bias a line to the '0' state and terminating impedance matching the characteristic impedance Z_0 of the line (to prevent signal reflexions).
- Terminaison
Abschluß
Adattamento

3. DATAWAY ORGANIZATION

(Some terms in this section are also used in connexion with Branch Organization, see Section 4)

- 301 **Dataway Operation**
Opération sur l'Interconnexion
Datenwegoperation
Operazione sull'interconnessione
- 302 **Command Operation**
Opération d'ordre
Befehlsoperation
Operazione di comando
- 303 **Unaddressed Operation**
Opération non adressée
Nichtadressierte Operation
Operazione senza indirizzamento
- 304 **Strobes**
Signaux d'échantillonnage
Strobesignale (S1, S2)
Campionamento
- 305 **Busy**
Occupation
Belegt
Occupato
- 311 **Command**
Ordre
Befehl
Comando
- 312 **Station Number**
Numéro de station
Stationsnummer
Numero di stazione
- 313 **Sub-address**
Sous-adresse
Subadresse
Sub-indirizzo
- 314 **Function**
Fonction
Funktion
Funzione
- 321 **Data**
Données
Daten
Dati
- A data transfer or control operation on the Dataway, characterized by the generation of Busy and Strobe signals. Includes command operations and unaddressed operations.
 - A Dataway or Branch operation characterized by the presence of a Command (Station Number, Sub-address and Function).
 - A Dataway operation characterized by one of the common control signals, Initialise or Clear, without a command.
 - Dataway bus-lines S1 and S2, carrying timing signals which occur during command operations (S1 and S2) and during unaddressed operations (S2 and possibly S1).
 - Dataway bus-line B, carrying a signal indicating that a Dataway operation is in progress.
 - Signals on the Dataway or Branch Highway specifying one or more crates (branch only), one or more stations, a sub-address and a function.
 - Individual Dataway lines N1–N24, carrying signals addressing one or more stations (and hence addressing the modules occupying the stations). The Station Number is part of the command.
 - Branch Highway lines BN1, BN2, BN4, BN8, BN16 carrying signals which, when decoded in the crate controller, address one or more stations via the Dataway N lines. Codes BN(24), BN(26), BN(28) and BN(30) have special significance in association with Crate Controller Type A.
 - Dataway bus-lines A1, A2, A4, A8, carrying signals which, when decoded in the module, address a subsection A(n) of the module. The sub-address is part of the command. Also Branch BA lines.
 - Dataway bus-lines F1, F2, F4, F8, F16, carrying signals which, when decoded in the module, specify the operation as the type defined by function code F(n). The function is part of the command. Also Branch BF lines.
 - All information carried by the Read (R) and Write (W) lines of the Dataway and by branch highway BRW lines during command operations.

- 322 **Read**
Lecture
Lesen
Lettura
- 323 **Write**
Ecrire
Schreiben
Scrittura
- 324 **Overwrite**
Transcrire
Überschreiben
Trascrizione
- 325 **Selective Overwrite**
Transcrire sélectivement
Selektives Überschreiben
Trascrizione selettiva
- 326 **Selective Set**
Mettre à 1 sélectivement
Selektives Setzen
Posizionamento selettivo
- 327 **Selective Clear**
Remettre à zéro sélectivement
Selektives Löschen
Cancellazione selettiva
- 331 **Status Information**
Indication d'état (état)
Status
Informazione di stato
- 332 **Response**
Réponse
Echo
Riposta
- 333 **Command Accepted**
Ordre accepté
Befehl angenommen
Comando accettato
- 341 **Disable**
Mettre hors service
Abschalten
Disabilitazione
- 342 **Enable**
Mettre en service
Einschalten
Abilitazione
- 343 **Execute**
Exécuter
Ausführen
Esecuzione
- Direction of data transfer from modules to crate controller, using Dataway lines R1 to R24, and to the branch driver, using branch highway lines BRW1–BRW24.
 - Direction of data transfer from branch driver to crate controllers, using branch highway lines BRW1–BRW24, and to modules, using Dataway lines W1–W24.
 - CAMAC term for 'jam transfer' write functions, which force each bit of the selected register in the module to the same logic state as the corresponding Write data line.
 - Partial overwrite functions defined for F(18) and F(19) in EUR4600 (1969). Superseded by Selective Set and Selective Clear.
 - Write functions that set selected bits of a register in the module to '1' and leave unselected bits unchanged.
 - Write functions that reset selected bits of a register in the module to '0' and leave unselected bits unchanged.
 - Primarily the Dataway signals Response (Q) and Command Accepted (X), but sometimes extended to include Look-at-Me (L) and Busy (B).
 - A one-bit status signal from modules to the crate controller on Dataway line Q and to the branch driver on branch highway line BQ. See also Test Status (354), Test LAM (355), Address Scan Mode (601), Repeat Mode (602), and Stop Mode (603).
 - A one-bit status signal from modules to the crate controller on Dataway line X, and to the branch driver on branch highway line BX, indicating ability to perform the action required by the command. (Introduced in 1972 revision.)
 - [General use in CAMAC] to prevent an action until it is specifically re-enabled. Examples: Disable L output, Disable data input.
 - A standard CAMAC function, F(24).
 - [General use in CAMAC] to allow an action (inverse of Disable).
 - A standard CAMAC function, F(26).
 - A standard CAMAC function, F(25), to initiate a single-shot action. Example: to generate a single pulse.

- 345 **Group 1 (registers)** — In modules—a set of up to 16 registers accessed by commands with function codes F(0, 2, 3, 9, 16, 18, 21).
 Groupe 1 (registres)
 Gruppe 1 (registern)
 Gruppo 1 (registri)
- 346 **Group 2 (registers)** — In modules—a second set of up to 16 registers accessed by commands with function codes F(1, 11, 17, 19). Recommended for information requiring restricted access, and for system status information (e.g. LAM Status, LAM Mask, LAM Requests, and Module Characteristics).
 Groupe 2 (registres)
 Gruppe 2 (registern)
 Gruppo 2 (registri)
- 347 **Module Characteristic** — A word read from a module to identify the type of module. Recommended location at sub-address A(15), Group 2. An optional feature that may, for example, be associated with a classification scheme for modules.
 Nombre caractéristique du tiroir
 Module-Kennung
 Caratteristica del modulo
- 351 **Look-at-Me (LAM)** — An individual signal line from each Dataway normal station to the control station, by which a module can request attention (a demand handling feature, usually abbreviated to LAM or L).
 Lancement d'Appel par le Module
 Anforderung
 Richiamo
- 352 **LAM Source** — A condition that sets a LAM status bit in a module to demand attention. The LAM source may be in the module or in external equipment and may be a maintained or transitory condition.
 Source de LAM
 Anforderungs-Quelle
 Sorgente di richiamo
- 353 **LAM Status Register** — A group of bistables in a module that are set by the individual LAM sources.
 Registre d'état des LAM
 Anforderungs-Statusregister
 Registro di stato dei richiami
- 354 **Test Status** — Standard CAMAC functions to examine the state of a specified feature of a module and generate the appropriate response Q.
 Contrôler une indication d'état
 Prüfen des Status
 Esame dello stato
- 355 **Test LAM** — Standard CAMAC functions to examine the state of a specified feature of a module and generate the appropriate response Q.
 Contrôler un LAM
 Prüfen der Anforderung
 Esame del richiamo
- 356 **LAM Mask** — Optional feature of modules with multiple LAM sources, consisting of gates controlling which LAM sources give rise to LAM requests. Generally controlled by a Mask Register, recommended location A(13), Group 2.
 Masque de LAM
 Anforderungs-Maske
 Maschera dei richiami
- 357 **LAM Request** — In a module, a contribution to the Look-at-Me signal from one of several LAM sources. Multiple LAM requests may be treated as outputs of a (notional) LAM Request Register accessed at A(14), Group 2.
 Demande de LAM
 Anforderung der LAM-Quelle
 Richiesta di richiamo
- 361 **Common Control Signals** — The Dataway signals Initialise, Clear and Inhibit, and the branch signal Initialise.
 Commandes générales
 Gemeinsame Steuersignale
 Segnali di controllo comuni
- 362 **Initialise** — A Dataway bus-line (Z) and common control signal associated with an unaddressed operation on the Dataway. Also a branch highway line BZ. Typically used at switch-on to set a CAMAC system to a defined state.
 Initialisation
 Initialisieren
 Inizio

- 363 **Inhibit**
 Inhibition
 Sperren
 Inibizione
- 364 **Clear**
 Remise à zéro
 Löschen
 Cancellazione
- 371 **Hold**
 Rupture de cycle
 Halten, Warten
 Mantenimento
- A Dataway bus-line (I) and common control signal used to prevent actions, such as data taking, in modules.
- [In general] to prevent a signal output assuming the '1' state while the inhibit condition persists.
- A Dataway bus-line (C) and common control signal, associated with an unaddressed operation on the Dataway (not on Branch Highway). All data registers connected to the Clear signal are set to zero.
- Standard function codes (Clear Group 1 Register, Clear Group 2 Register) which clear registers at specified sub-addresses.
- Some CAMAC users assign free bus-line P2 (see 216) to a Hold signal which, in controllers following this convention, delays the generation of Strobe S1 while H=1 is present. (Not defined as part of the CAMAC specifications.)

4. BRANCH ORGANIZATION

(Some relevant terms will also be found under Section 3, Dataway Organization)

- 401 **Branch Operation**
 Opération de branche
 Branch-Operation
 Operazione sulla diramazione
- 402 **Graded-L Operation**
 Opération en mode GL
 GL-Operation
 Operazione sui richiami condizionati
- 403 **Crate Address**
 Adresse de châssis
 Rahmenadresse
 Indirizzo del contenitore
- 404 **Graded-L Request**
 Demande de lecture de la configuration d'appels
 Abruf der sortierten Anforderungen (GL-Bitmuster)
 Richiesta dei richiami condizionati
- 405 **Branch Demand**
 Demande de branche
 Branch-Anforderung
 Domanda della diramazione
- 406 **Phase**
 Phase
 Phase
 Fase
- 407 **Branch Timing**
 Séquence de temps
 Branch-Zeitablauf
 Sequenza temporale sulla diramazione
- An individual data transfer or control operation on the branch highway. Includes command operations and Graded-L operations.
- A Branch operation characterized by the Graded-L Request signal (BG) without a command. It reads a 24-bit Graded-L word giving information about demands in all on-line crates.
- A part of the Branch command, specifying one or more of the seven crates by signals on lines BCR1 to BCR7.
- A pseudo-command signal (BG) on the branch highway, by which the branch driver asks for a 24-bit summary of Look-at-Me signals in all on-line crates.
- A demand handling signal (BD) on the branch highway, indicating that at least one module is demanding attention.
- One of the four parts of each branch operation.
- Branch highway 'handshake' signals (BTA, BTB) interlocking the sequence of actions in the branch driver and crate controller.

- 411 *Graded-L Signals*
 Signaux GL
 GL-Signale
 Richiami condizionati
- A selection, rearrangement, or combination of the Dataway L signals, forming the Graded-L word.

5. GENERAL TERMS IN THE CONTEXT OF CAMAC

- 501 *Compatibility*
 Compatibilité
 Kompatibilität
 Compatibilità
- CAMAC compatibility is achieved by satisfying the mandatory requirements of EUR4100 for mechanical and electrical interfaces to the Dataway.
- 502 *Mandatory*
 Obligatoire
 Zwingend vorgeschrieben
 Obbligatorio
- Mandatory requirements must be satisfied by all CAMAC-compatible equipment. Characterized by 'must' in CAMAC Specifications.
- 503 *Recommended*
 Recommandé
 Empfohlen
 Raccomandato
- Recommended practices should be followed unless there are strong reasons to the contrary. Characterized by 'should' in CAMAC Specifications.
- 504 *Permitted*
 Autorisé
 Erlaubt
 Permeso
- Permitted practices are allowed but need not be followed. Characterized by 'may' in CAMAC Specifications.
- 505 *Reserved*
 Réservé
 Reserviert
 Riservato
- Reserved features are not available for general use until released by ESONE. This applies to some function codes F(5, 7, 13, 15, 29, 31), Dataway power lines Y1 and Y2, and some branch highway lines BV1–BV7.
- 506 *Non-Standard*
 Non-standard
 Nicht-Standard
 Libero
- Non-standard features are free for unspecified uses. This applies to some function codes F(4, 6, 12, 14, 20, 22, 28, 30), patch contacts P3–P7, and bus-lines P1–P2. Non-standard features allow freedom for local interpretations that are not necessarily mutually compatible.
- 511 *On-line*
 En ligne
 On-line (betriebsbereit)
 In linea
- [CAMAC systems] directly connected to a computer.
 – [CAMAC crate controllers] connected to the branch highway and in an operable state.
- 512 *Off-line*
 Hors ligne
 Off-line (nicht betriebsbereit)
 Fuori linea
- [CAMAC systems] operating without direct connexion to a computer or processor.
 – [CAMAC crate controllers] physically connected to the branch highway but not responding to its operations.
- 513 *Real-time*
 Temps réel
 Realzeit, schritthaltend
 Tempo reale
- Operating on a time scale set by independent external conditions.

- 521 **Hardware**
 Matériel électronique
 Hardware
 Apparecchiature (hardware)
 — Physical equipment
- 522 **Software**
 Programme
 Software
 Programmi (software)
 — Programs defining the sequence of operations in computer-like equipment.
- 531 **Bit**
 Bit
 Bit
 Bit
 — A binary digit. A signal or item of information with only two permitted values, '0' and '1'.
- 532 **Word**
 Mot
 Wort
 Parola
 — A group of bits—typically the maximum group that is processed as a unit within a computer etc. Hence a group of 24 bits in CAMAC. In general the grouping of bits into a word does not necessarily imply their relative numerical values.
- 533 **Byte**
 Byte
 Byte
 Byte
 — A group of bits—typically 8 bits (sometimes 6 bits) associated with character-organized peripherals or with the internal structure of a computer etc.
- 534 **Low/High Order**
(Less/More Significant)
 Ordre, inférieur/supérieur
 (Significatif, Moins/Plus)
 Wertigkeit, niedrige/hohe
 (Wertig, nieder/höher)
 Parte meno/più significativa
 — Terms indicating the relative value or weighting of the bits in a word or byte, where appropriate. (In CAMAC, Read bit R1 and Write bit W1 are least significant.)
- 535 **Complement**
 Complément
 Komplement
 Complemento
 — The complement of a binary number 'a' is *either* $(2^n - a)$, called 'Two's complement' *or* $(2^n - 1 - a)$, called 'One's complement'. There is a standard CAMAC function F(3) to generate One's complement.
- 541 **Register**
 Registre
 Register
 Registro
 — [In CAMAC] an addressable data source or receiver, not necessarily with data storage properties. (See 321 for a definition of 'data'.)
- 542 **Reset (clear)**
 Remettre à zéro
 Rücksetzen (Löschen)
 Azzerare (Cancellare)
 — To put a register or signal source into the '0' state.
- 543 **Set**
 Positionner (Mettre à un)
 Setzen
 Posizionare
 — To put a register or signal source into the '1' state.
- 544 **Peripheral (device)**
 Périphérique
 Peripheriegerät
 Periferico (dispositivo)
 — In general an input/output device (or storage device) connected to the I/O facilities of a computer. Hence, by analogy, a device connected to a CAMAC module.

- 545 *Interface*
Interface
Interface
Interfaccia
- [Preferred] A junction between two parts of a system with the same 'interface standards', e.g. the Dataway connector and Branch Highway port are interfaces in this sense.
- [Widely used] An adaptor or converter between two parts of a system with different 'interface standards', e.g. Crate Controller Type A is an interface in this sense, between the Dataway and Branch Highway.
- 551 *Intrinsic OR (Wired OR)*
OU câblé
Verdrahtetes ODER
Elemento logico "OD" (OR) intrinseco
(O cablato)
- A property of certain logic elements whose outputs generate an OR function when joined together, i.e. if any output is in the '1' state the junction is in the '1' state irrespective of the other outputs.
- 552 *Cross-coupling (Cross-talk)*
Diaphonie
Übersprechen
Accoppiamento mutuo
- False signals on one (Dataway or Branch Highway) line caused by signals on other lines.
- 553 *DTL, TTL*
- Families of integrated circuits (Diode-transistor-logic and Transistor-transistor-logic) available from many manufacturers. The CAMAC signal standards are related to the standards of DTL and TTL.
- 555 *Analogue Signals*
Signaux analogiques
Analogsignale
Segnali analogici
- Signals which convey numerical information by the value of a continuous variable such as amplitude, duration, frequency etc. Recommended standards are given in EUR5100e.
- 556 *Negative logic*
Logique négative
Negative Logik
Logica negativa
- The convention for binary digital signals used in CAMAC. The more negative state (0V) signifies logic '1', and the more positive state signifies logic '0'.
- 561 *Demand Handling*
Traitement de la demande
Anforderungsbearbeitung
Elaborazione della domanda
- General term for the means by which requests for attention are transmitted from modules to the crate controller (and branch driver).
- 562 *Priority Sorter*
Tiroir de conditionnement des priorités
Prioritäts-Sortiereinheit
Selezionatore di priorità
- A means by which relative priorities are attached to different demands (L signals, Graded-L signals) and the demand with highest priority is identified. [Note: this is sometimes a 'distributed' feature, in which priority order corresponds to the sequence of interconnexions between units.]
- 563 *Multiple addressing*
Adressage multiple
Vielfachadressierung
Indirizzamento multiplo
- A mode of operation in which more than one station (and/or more than one crate in a branch highway system) is addressed simultaneously, but with the same function and sub-address.
- 564 *Block Transfer*
Transfert de bloc
Blocktransfer
Trasferimento di sequenze di dati
- [In CAMAC sense] a sequence of transfers involving an array of CAMAC addresses and/or an array of store locations (e.g. in a computer store).

6. OTHER SPECIALIZED AND NON-CAMAC TERMS

- 601 *Address Scan Mode*
Mode scrutation d'adresse
Sequentielle Adressierung (Adress-Mode)
Modo di indirizzamento a scansione
- A recommended block transfer mode involving an array of CAMAC addresses, not necessarily consecutive but each identified by the response Q=1.

- 602 **Repeat Mode** — A recommended block transfer mode in which the CAMAC module indicates by the response Q=0 that it is not ready, and so causes the operation to be repeated.
 Mode répétitif
 Wiederholende Betriebsart (Wiederhol-Mode)
 Modo ripetuto
- 603 **Stop Mode** — A recommended block transfer mode in which the CAMAC module indicates by the response Q=0 when end-of-block has occurred.
 Mode arrêt
 Stop-Betriebsart (Stop-Mode)
 Modo stop
- 611 **Multi-branch** — A system configuration with more than one branch highway.
 Multi-branche
 Multibranch
 Diramazione multipla
- 612 **Multi-source** — A system configuration with more than one source of commands.
 Multi-source
 Multisource
 Plurisorgente
- 613 **System Controller** — A means by which one or more branch highways are interconnected to one or more computers.
 Contrôleur système
 Systemsteuerung
 Unità di controllo del sistema
- 614 **System Crate (Master crate, base crate)** — A crate in which there are units giving access to more than one branch and/or more than one source of commands.
 Châssis système
 Systemrahmen
 Contenitore del sistema (contenitore principale, contenitore base)
- 615 **Executive Controller** — Typically in a system crate—a controller whose main function is to transfer commands and data between sources and branch drivers.
 Contrôleur de système
 Executive-Steuerung
 Elemento di controllo supervisore
- 621 **Branch Controller** — The means by which the branch highway is interconnected to a computer—hence it includes a branch driver and features of a computer peripheral.
 Contrôleur de branche
 Branchsteuerung
 Elemento di controllo della diramazione
- 622 **Virtual Controller** — A definition of the relationship between CAMAC commands at a hardware interface (branch highway or Dataway) and user statements at a software interface. Practical implementations may involve both hardware and software.
 Contrôleur virtuel
 Virtuelle Steuerung
 Elemento di controllo virtuale
- 623 **Parallel Processing Controller** — A (branch) controller for autonomous operations, coupled directly to a computer store. It behaves as an extra processing unit which extracts commands from store and transfers data to or from store.
 Contrôleur parallèle de processus
 Steuerung mit paralleler Verarbeitung
 Elemento di controllo per elaborazione in parallelo
- 625 **Coupler** — A means by which the Dataway or branch highway is interconnected to a computer.
 Coupleur
 Koppeleinheit, Interface
 Elemento di collegamento

- 626 *Autonomous Operations*
Opérations autonomes
Autonome Operationen
Operazioni autonome
- 633 *NIM Adaptor*
Adapteur NIM
NIM-Adapter
Adattore NIM
- 634 *Bin*
Châssis pour modules NIM
NIM-Rahmen
Cassa (NIM)
- Operations that are initiated by the CAMAC system (often with commands generated within CAMAC). Used in contrast to 'programmed' operations which are typically initiated by a program running in the processing unit (CPU) of an associated computer.
- Allows a NIM module to pick up power supplies from a CAMAC Dataway Station.
- [NIM] a chassis for NIM modules.
