

Addendum to the Editorial by P. Ribaud and G. Mathé

Phase I Trials in Clinical Oncostatic Pharmacology

Cancer Chemother. Pharmacol. **4**, 1–3 (1980)

On Page 2, Paragraph g):

The dose administered to the first patient should not exceed one-third of the LD_{10} for mice (17) [*it is usually $1/10^{th}$*], and the extrapolation

On Page 2, Paragraph 3, 5th line:

. . . . The increase for the next patients, *when the dose of the first corresponds per m^2 to the 10^{th} of the LD_{10} in mice*, is developed according to
