|                                                                                                                                                                                                                                                                                                                                                 |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Cross-polarisation kinetics and proton NMR relaxation in polymers of <i>Citrus</i> cell walls<br>M.C. Jarvis, K.M. Fenwick (Glasgow, UK) and D.C. Apperley (Durham, UK) . . . . .                                                                                                                                                               | 1   |
| CP-MAS NMR of highly mobile hydrated biopolymers: polysaccharides of <i>Allium</i> cell walls<br>M.-A. Ha, B.W. Evans, M.C. Jarvis (Glasgow, UK), D.C. Apperley and A.M. Kenwright (Durham, UK) . . . . .                                                                                                                                       | 15  |
| Synthesis and structural studies of branched 2-linked trisaccharides related to blood group determinants<br>J.Ø. Duus (Copenhagen, Denmark), N. Nifant'ev, A.S. Shashkov, E.A. Khatuntseva (Moscow, Russia) and K. Bock (Copenhagen, Denmark) . . . . .                                                                                         | 25  |
| Mutarotation of D-fructose in aqueous–ethanolic solutions and its influence on crystallisation<br>A.E. Flood, M.R. Johns and E.T. White (Brisbane, Australia) . . . . .                                                                                                                                                                         | 45  |
| Predicting helical structures of the exopolysaccharide produced by <i>Lactobacillus sake</i> 0-1<br>G.W. Robijn (Utrecht, The Netherlands), A. Imberty (Nantes, France), D.J.C. van den Berg, A.M. Ledebor (Vlaardingen, The Netherlands), J.P. Kamerling, J.F.G. Vliegthart (Utrecht, The Netherlands) and S. Pérez (Nantes, France) . . . . . | 57  |
| Visible and <sup>13</sup> C nuclear magnetic resonance spectra of azo dyes and their complexes with cyclomalto-oligosaccharides<br>M. Suzuki, H. Takai, K. Tanaka, K. Narita, H. Fujiwara and H. Ohmori (Osaka, Japan) . . . . .                                                                                                                | 75  |
| Synthesis of four glycosides of a disaccharide fragment representing the terminus of the O-polysaccharide of <i>Vibrio cholerae</i> O:1, serotype Inaba, bearing aglycons suitable for linking to proteins<br>Y. Ogawa, P.-s. Lei and P. Kováč (Bethesda, MD, USA) . . . . .                                                                    | 85  |
| Synthesis of a tetrahydropyrano[2,3- <i>d</i> ]oxazole analogue of trehalosin<br>M. Shiozaki, T. Mochizuki, H. Hanzawa and H. Haruyama (Tokyo, Japan) . . . . .                                                                                                                                                                                 | 99  |
| The use of 2-deoxy-2-trichloroacetamido-D-glucopyranose derivatives in syntheses of hyaluronic acid-related tetra-, hexa-, and octa-saccharides having a methyl β-D-glucopyranosiduronic acid at the reducing end<br>G. Blatter and J.-C. Jacquinet (Orléans, France) . . . . .                                                                 | 109 |
| A novel enzymic determination of maltobionate<br>Y. Shirokane, A. Arai, R. Uchida and M. Suzuki (Noda City, Japan) . . . . .                                                                                                                                                                                                                    | 127 |
| Characterisation of acidic heteroglycans from <i>Tremella fuciformis</i> Berk with cytokine stimulating activity<br>Q. Gao, R. Seljelid (Tromsø, Norway), H. Chen and R. Jiang (Changchun, People's Republic of China) . . . . .                                                                                                                | 135 |

|                                                                                                                                                                                                                                                                                                                                          |     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Arabinose and ferulic acid rich pectic polysaccharides extracted from sugar beet pulp<br>A. Oosterveld, G. Beldman, H.A. Schols and A.G.J. Voragen (Wageningen, The Netherlands) . . .                                                                                                                                                   | 143 |
| Composition and structural analysis of alpha-dextrins from potato amylopectin<br>Q. Zhu and E. Bertoft (Turku, Finland) . . . . .                                                                                                                                                                                                        | 155 |
| The influence of the conformational state of $\kappa$ - and $\iota$ -carrageenan on the rate of acid hydrolysis<br>T. Hjerde, O. Smidsrød and B.E. Christensen (Trondheim, Norway). . . . .                                                                                                                                              | 175 |
| Structure of stewartan, the capsular exopolysaccharide from the corn pathogen <i>Erwinia stewartii</i><br>M. Nimtz (Braunschweig, Germany), A. Mort (Stillwater, OK, USA), V. Wray, T. Domke<br>(Braunschweig, Germany), Y. Zhang (Heidelberg, Germany), D.L. Coplin (Columbus, OH, USA)<br>and K. Geider (Heidelberg, Germany). . . . . | 189 |
| Structural characterization of the exopolysaccharide produced by <i>Lactobacillus acidophilus</i> LMG9433<br>G.W. Robijn, R.G. Gallego (Utrecht, The Netherlands), D.J.C. van den Berg, H. Haas (Vlaardingen, The Netherlands), J.P. Kamerling and J.F.G. Vliegthart (Utrecht, Netherlands) . . . . .                                    | 203 |
| Potato xyloglucan is built from XXGG-type subunits<br>J.-P. Vincken, A.J.M. Wijsman, G. Beldman (Wageningen, The Netherlands), W.M.A. Niessen<br>(Leiden, The Netherlands) and A.G.J. Voragen (Wageningen, The Netherlands) . . . . .                                                                                                    | 219 |
| <i>Notes</i>                                                                                                                                                                                                                                                                                                                             |     |
| Reaction of enzymes with starch granules: enhanced reaction of glucoamylase with gelatinized starch granules<br>A. Kimura and J.F. Robyt (Ames, IA, USA) . . . . .                                                                                                                                                                       | 233 |
| Stereospecific synthesis of (–)- <i>allo</i> -muscarine from D-glucose<br>V. Popsavin, O. Berić, M. Popsavin, J. Csanádi and D. Miljković (Novi Sad, Yugoslavia) . . . . .                                                                                                                                                               | 241 |
| <i>Author index</i> . . . . .                                                                                                                                                                                                                                                                                                            | C1  |
| <i>Subject index</i> . . . . .                                                                                                                                                                                                                                                                                                           | C3  |
| <i>Contents</i> . . . . .                                                                                                                                                                                                                                                                                                                | C7  |
