RECENT ADVANCES IN C₁ CHEMISTRY

Guest Editors: G.J. Hutchings (Liverpool, UK) and M.S. Scurrell (Crown Mines, South Africa)

Publisher's Note	v
Introduction	1
Recent advances in the conversion of methane to synthesis gas S.C. Tsang, J.B. Claridge and M.L.H. Green (Oxford, UK)	3
Advances in low temperature Fischer-Tropsch synthesis B. Jager and R. Espinoza (Sasolburg, South Africa)	17
Methanol synthesis and water-gas shift reactions on Raney copper catalysts M.S. Wainwright and D.L. Trimm (Sydney, Australia)	29
Water-gas shift reaction: finding the mechanistic boundary C. Rhodes, G.J. Hutchings (Liverpool, UK) and A.M. Ward (Billingham, Cleveland, UK)	43
Potential sources of CO ₂ and the options for its large-scale utilisation now and in the future J.H. Edwards (North Ryde, NSW, Australia)	59
Erratum	67

METHODOLOGY AND SCOPE OF METAL/BROMIDE AUTOXIDATION OF HYDROCARBONS

W. Partenheimer (Naperville, IL, USA)

1. Introduction	70
1.1 Definition	70
1.2 Scope	70
1.3 Historical	71
1.4 Comparison of the MC method to other methods for the preparation of aromatic acids	73
1.5 Mechanism	73
1.6 Selectivity considerations	78
1.7 Controlling factors in the MC method	80
1.8 Deactivation mechanisms	81
1.9 Major by-products and intermediates normally encountered at the end of a MC oxidation	85
1.10 Comparison of gas and liquid phase oxidations	85
2. Solvents used in the MC method	86
3. MC catalyst — different types and their function	88
3.1 Introduction	88
3.2 Types of catalysts	88
3.3 General characteristics of the catalysts	89
3.4 An illustration of the complexity of MC type autoxidation catalysts — the Co/Mn/Mo/Br catalyst	91

3.5 Kinetic rationalization of Co, Co/Zr, Co/Mn/Br, and Co/Mn/Br/M (M = Mo, Zr, Hf) catalysts	92
3.6 Other types of catalysts	93
3.7 Comparison of MC and non-MC catalysts in acetic acid	94
3.8 Rationalization of the uniqueness of cobalt/bromide catalysts and of observations made in metal/bromide/chloride catalysts	95
3.9 Sources of active bromide	95
3.10 Activating effects of carboxylic acids	96
3.11 Solventless oxidations	96
3.12 pH effects in MC oxidations	97
3.13 Effect of the bromine/metals ratio	98
3.14 Effect of the manganese/cobalt ratio	98
4. MC oxidation of methylbenzenes	99
4.1 Introduction	99
4.2 Oxidation to intermediates	101
4.3 Oxidation of the polymethylbenzenes to polycarboxylic acids	104
4.4 Oxidation of intermediates of methylbenzenes	111
4.5 Oxidation of derivatives of methylbenzenes	112
5. Oxidation of ethylbenzenes	117
6. Oxidation of tetralins	121
7. Oxidation of isopropylbenzenes	122
8. Results from the MC oxidation of other alkylbenzenes	124
9. Oxidation of alkylnaphthalenes	126
9.1 Introduction	126
9.2 Oxidation of methylnaphthalenes	128
9.3 Oxidation of ethylnaphthalenes	131
9.4 Oxidation of isopropyl naphthalenes	131
9.5 Oxidation of miscellaneous alkylnaphthalenes	131
10. Oxidation of biphenyls	133
11. Oxidation of oligomeric compounds	135
12. Oxidation of heterocyclic compounds	140
13. Oxidation of organometallic compounds	144
14. Oxidation of non-aromatic compounds	146
14.1 Oxidation of alkanes	149
14.2 Oxidation of alcohols, aldehydes, ethers, and acids	150
14.3 Oxidation of alkenes	151
Acknowledgements	153
References	153

HRTEM FOR CATALYSIS

Guest Editor: M.J. Ledoux (Strasbourg, France)

Introduction	159
Electron microscopy of catalysts; the present, the future and the hopes M. José-Yacamán, G. Díaz and A. Gómez (México DF, Mexico)	161
What can we observe in zeolite related materials by HRTEM? O. Terasaki (Sendai, Japan) and T. Ohsuna (Iwaki, Japan)	201
HREM study of the behaviour of a Rh/CeO ₂ catalyst under high temperature reducing and oxidizing conditions S. Bernal, F.J. Botana, J.J. Calvino, G.A. Cifredo, J.A. Pérez-Omil and J.M. Pintado (Cádiz, Spain)	219
Physical characterization of molybdenum oxycarbide catalyst; TEM, XRD and XPS P. Delporte, F. Meunier, C. Pham-Huu (Strasbourg, France), P. Vennegues (Valbonne, France), M.J. Ledoux and J. Guille (Strasbourg, France)	251
HREM studies of layered transition metal sulfide catalytic materials R.R. Chianelli, A.F. Ruppert (Annandale, NJ, USA), M. José-Yacamán and A. Vázquez-Zavala (México DF, Mexico)	269

A sub-nanometer structural study of Pt–Rh catalysts supported on Ce doped SiC M. Benaïssa, C. Pham-Huu, J. Werckmann, C. Crouzet and M.J. Ledoux (Strasbourg, France)	283

THE IMPACT OF COMPUTERS ON CATALYST RESEARCH AND DEVELOPMENT

Guest Editors: A. Miyamoto (Sendai, Japan), T. Hattori (Nagoya, Japan), and M. Misono (Tokyo, Japan)

Foreword	299
A short note on the work of Professor Yukio Yoneda in the application of computer chemistry to studies of catalysis M. Misono (Tokyo, Japan)	301
Prospect, rather than retrospect, on the impact of computers in catalytic research and development Y. Yoneda (Tokyo, Japan)	305
Quantum-chemical modelling of hydrocarbon oxidation on vanadium-based catalysts J. Haber and M. Witko (Cracow, Poland)	311
Comprehensive description of the acidic property of effective metallosilicate catalysts by computer simulation T. Inui, K. Matsuba and Y. Tanaka (Kyoto, Japan)	317
A multi-faceted approach to modeling heterogeneous catalysts J.M. Newsam and Y.S. Li (San Diego, CA, USA)	325
Computational study of the highly efficient conversion of methane to methanol with mercury(II) catalysts J.A. Horsley, D.J. Vanderveken and R.A. Periana (Mountain View, CA, USA)	333
Local density functional study on adsorption of Cu ²⁺ and Fe ²⁺ on a Si(100) surface M. Ishida, M. Yoshida, M. Takashima and K. Sawara (Tsukuba, Japan)	341
Neural network as a tool for catalyst development T. Hattori (Nagoya, Japan) and S. Kito (Toyota, Japan)	347
Density functional study on the reaction of CO molecules with MgO surfaces H. Kobayashi (Kyoto, Japan), D.R. Salahub (Québec, Canada) and T. Ito (Tokyo, Japan)	357
Quantum chemical approach to the interpretation of the STM tunneling mechanism: semiempirical calculations on the electronic structures of silica/silicon clusters M. Komiyama and Y. Iwashita (Kofu, Japan)	365
CO and NO chemisorption on heavy metal surfaces: cluster model study N. Watari (Kanagawa, Japan) and S. Ohnishi (Ibaraki, Japan)	371
DFT description of structure and bonding in transition metal oxides E. Broclawik (Cracow, Poland)	379
Monte Carlo simulation of the sol–gel process for the hydrolysis and polycondensation of tin tetra-n-butoxide Y. Murakami, T. Matsumoto, K. Yahikozawa and Y. Takasu (Ueda, Japan)	383
Mechanisms of CO ₂ separation by microporous crystals estimated by computational chemistry Y. Nakazaki (Osaka, Japan), Y. Tanaka, N. Goto and T. Inui (Kyoto, Japan)	391
Molecular dynamics studies on thermal behavior of an MFI-type zeolite K. Yamahara, K. Okazaki (Yokohama, Japan) and K. Kawamura (Tokyo, Japan)	397
Density functional calculations on agostic ethyl–Ti(IV) complexes H. Munakata (Kyoto, Japan), Y. Ebisawa, Y. Takashima (Chiba, Japan), M.C. Wrinn, A.C. Scheiner and J.M. Newsam (San Diego, CA, USA)	403
Development of RYUGA for three-dimensional dynamic visualization of molecular dynamics results R. Miura, H. Yamano, R. Yamauchi, M. Katagiri, M. Kubo (Sendai, Japan), R. Vetrivel (Pune, India) and A. Miyamoto (Sendai, Japan)	409
Atomic processes in the thermal destruction of zeolites as investigated by molecular dynamics and computer graphics Y. Oumi, H. Yamano, M. Kubo (Sendai, Japan), R. Vetrivel (Pune, India) and A. Miyamoto (Sendai, Japan)	417

Structure and Lewis acid sites in alumoxane compounds	
T. Yamasaki (Shizuoka, Japan)	425
Theoretical study of NO decomposition on Cu-ZSM-5 catalyst models	
Y. Yokomichi, H. Ohtsuka, T. Tabata, O. Okada (Osaka, Japan), Y. Yokoi (Tokyo, Japan), H. Ishikawa (Aichi, Japan), R. Yamaguchi (Fukuoka, Japan), H. Matsui (Tokyo, Japan), A. Tachibana and T. Yamabe (Kyoto, Japan)	431
Computational chemistry on catalyst technology and international collaboration	
Y. Arai (Tokyo, Japan)	439
