About the cover: Treatment of formylalkenoates with AIBN in the presence of dioxygen gave oxygenated carboxylic acids instead of acyl radical cyclization products, through preferential reaction of acyl radical with dioxygen rather than intramolecular attack to enoate moiety. The reaction of formylalkenoate with AIBN in the absence of dioxygen recovered starting material in 98% yield. See the article by Yoshikai *et al.* on page 586 of this issue.
