# CLASSIFIED ADVERTISEMENTS

COMMISSION  
OF EUROPEAN COMMUNITIES

## ANY CHEMICAL PROBLEMS WITH EUROPEAN CUSTOMS?

Then what you need is the "CLASSIFICATION OF CHEMICALS IN THE CUSTOMS TARIFF OF THE EUROPEAN COMMUNITIES", which will give you the classification on the EEC customs tariff of all chemical substances on the European Market.

20,000 chemical names (internationally accepted common names, systematic names and synonyms) are listed in this publication, and all can be used to gain access to the European Communities Data and Information Network (ECDIN.)

The synonyms are cross-referenced to "preferred names", use of which is advised in order to facilitate customs clearance and ensure uniformity.

## MULTILINGUAL DICTIONARY

The first six volumes of this seven-volume work list alphabetically those chemicals in which there is a significant commercial interest. Volumes I to VI are in Danish, German, English, French, Italian and Dutch respectively.

The seventh volume lists, after the reference numbers of the single language volumes, the same names in all six languages. Thus this publication also provides uniform chemical terms in several languages (in which the differences are those of language only, i.e., the terms in each language are based on the same principle of chemical nomenclature) and constitutes an invaluable glossary for specialists such as chemists, translators, technical writers, etc.
