Faraday & Faraday Discussions & Symposia

Faraday Discussions take place twice a year and are designed to cover the broad aspects of physicochemical topics, thereby encouraging scientists of different disciplines to contribute their varied viewpoints to a common theme.

Three recent *Discussions* are:

No. 72 Selectivity in Heterogeneous Catalysis

Faraday Discussions
of the
Chemical Society
No. 72

Selectivity in
Heterogeneous Catalysis

1981

The result of a *Discussion* held at the University of Nottingham, September 1981, this publication covers: Selective Oxidation and Hydrogenation, CO-H₂ and Methanol Reactions, Polymerizations and Enantioselective Processes. Newer catalyst systems to be featured will include: Bimetallics, Shape-selective zeolites and Anchored Complexes.
