NEW PUBLICATIONS

from The Royal Society of Chemistry

TWO NEW BOOKS FOR TEACHERS AND STUDENTS OF CHEMISTRY RSC PAPERBACKS

In 1983 The Royal Society of Chemistry introduced a new series of inexpensive texts for students and teachers. Topics covered relate to those subjects which are commonly featured in courses on chemistry and related areas, which are currently taught in schools, universities and colleges.

Prices quoted below apply to both RSC Members and non-RSC Members.

FOOD: The Chemistry of its Components

By T. P. Coultate

Softcover 202pp
0 85186 483 X (1984)

Price £5.95 (\$11.00)

This book gives a detailed account of the chemistry of the principal substances of which our food is composed. Both the macro-components, the carbohydrates, lipids and proteins, which can be classified by their chemical structures, and the micro-components, the colours, flavours, vitamins and preservatives, which are classified in terms of function are considered. Throughout the book, Dr Coultate's theme is the relationship between the chemical structure of a substance and its contribution to the properties and behaviour of foodstuffs—whether observed in the laboratory, the factory, the kitchen or the dining room.

Contents:

Introduction, carbohydrates, lipids, proteins, colours, flavours, vitamins, preservatives, EEC numbers of food additives. Subject index. This book will be of particular benefit to students and teachers of food science and related courses in universities, colleges of further education and schools.

WATER

Revised 1st Edition

By Felix Franks

Softcover 102pp
0 85186 473 2 (1984)

Price £2.50 (\$6.00)

The book considers the present state of our knowledge of liquid water, its remarkable physical properties and how these give rise to a unique structure, its influence on the interactions between solutes, its role in maintaining biologically active structures, its involvement in chemical reactions and the problems posed by its management and in providing sufficient amounts of water of adequate quality.

An understanding of the behavioural properties of water is fundamental to gaining an appreciation of many scientific processes and principles. Science students and teachers will, therefore, find *Water* not only interesting reading, but also of considerable relevance to their studies.

Contents:

Occurrence, importance and physical properties; The place of water in the general classification of liquids; Isotopic composition; The structure of the water molecule and the nature of the hydrogen bond in water: Ice – its structure and dynamics; The structure of liquid water; The dynamic properties of liquid water; Towards a molecular description of water; Aqueous solutions of simple molecules; Aqueous solutions of electrolytes; The role of water in the stabilisation of biologically significant structures; Reactions in aqueous solutions; Water in the environment – quality, availability and exploitation; Summary and future prospects.
