BASIC Molecular Spectroscopy

P A Gorry

A concise and easy to read introduction, teaching BASIC by practical example, this book applies computing to the solution of real problems, enabling you to write your own programs.

It's a useful source of working programs for readers in research and industry, and is one of an extensive series applying BASIC to a wide range of disciplines.

Recent Advances in the Chemistry of β -Lactam Antibiotics

3rd International Symposium 1984

Edited by A G Brown
and S M Roberts

Softcover 399pp
ISBN 0 85186 955 6
Price £26.50 (\$48.00)
RSC Members £16.00

This book contains a series of articles which describe the results of research accomplished in recent years.

Contents

The Synthesis and Biological Properties of Recent Cephalosporins; The Mechanisms of Reactions of Cephalosporins and the Synthesis of Non- β -Lactam Analogues; Recent Advances in the Chemistry and Biology of Penicillins; Studies on the Methoxylation of Cephalosporins and Penicillins with Cell-free Enzyme Preparations from *Streptomyces* Species; Recent Studies on the Biosynthesis of Penicillins; Structure-Activity Relationships Among Some Totally Synthetic Carbapenems; Synthesis and Some Antibacterial Properties of 2-Oxypenems; Cycloaddition Reactions of Some Olivanic Acid Derivatives; Synthesis and Antibacterial Activity of Asparenomycins and Related Carbapenem and Penem Antibiotics; β -Lactam Synthesis from 2-Pyridone Photoisomers; The OA-6129 Group of Carbapenems and the Biosynthesis of Carbapenem Antibiotics; Synthesis of

Novel Bicyclic β -Lactam Derivatives; 6-Diazopenicillanate Chemistry and Some Aspects of Penam Rearrangements; Do β -Lactam Antibiotics Require a β -Lactam Ring? The Chemistry of Clavulanic Acid and its Derivatives; YTR-830 and Related Active β -Lactamase Inhibitors; On the Design of New β -Lactamase Inhibitors; Synthesis of Penem Antibiotics; Mechanisms of Action of β -Lactamases; The Chiral Synthesis of 3-Acylamino-2-Oxoazetidines with Various N-1 Functionality; Synthesis, Chemical, and Biological Properties of Substituted N-Hydroxy-2-azetidiones; X-Ray Structure of Transpeptidase Enzyme and Its β -Lactam Binding Site; Posters Presented at the Symposium.

Special Publication No. 52 (1985)

ORDERING

Non-RSC Members should send their orders to:
The Royal Society of Chemistry, Distribution Centre,
Blackhorse Road, Letchworth, Herts SG6 1HN, England

RSC Members should send their orders to:
The Royal Society of Chemistry, Membership Officer,
30 Russell Square, London WC1B 5DT

The Martin Sulfurane Dehydrating Agent

The Martin sulfurane dehydrating agent {1, bis[α,α -bis(trifluoromethyl)benzenemethanolato]diphenylsulfur}^{1,2} is a very versatile dehydrating (as well as oxidizing) agent as shown by the following scheme of reactions carried out in Professor Martin's laboratories.

In addition to the chemical applications for the sulfurane, Professor Martin and his coworkers have found the crystals very good probes for the quality of the atmosphere in a dry box. A few crystals on a watch glass will liquefy in a period of time, from a few minutes to several hours, depending on the amount of residual moisture in the dry box.
