

# CHEMISTRY INTERNATIONAL

THE NEWS MAGAZINE OF THE  
INTERNATIONAL UNION OF PURE AND APPLIED CHEMISTRY(IUPAC)

IUPAC Secretariat: *Bank Court Chambers, 2-3 Pound Way, Templars Square  
Cowley, Oxford OX4 3YF, England*

IUPAC is the international organization dedicated to establishing and maintaining standards in pure and applied chemistry and promoting international cooperation among chemists. *Chemistry International* will keep you up to date with regular progress reports on all IUPAC's activities, including those of its policy committees, and tell you how you may comment on tentative recommendations on nomenclature and symbols at the stages where opinions are being sought by Commission experts. *Chemistry International* will show you how you may have some influence in the way the world's chemists communicate with each other and with scientists in other disciplines. An extensive conference calendar indicates IUPAC-sponsored conferences in all areas of chemistry, while *CI* also keeps the scientist up to date on technical reports published by IUPAC and includes frequent subject indexes to reports.

IUPAC represents chemistry internationally and thus *Chemistry International* is the magazine for all seriously concerned chemists worldwide.

How *Chemistry International* can help you. Do you know that...

\*IUPAC sponsors about 30 conferences throughout the world each year? Amongst the most successful are the CHEMRAWN conferences: CHEMical Research Applied to World Needs.

\*IUPAC is highly active in chemical education? For example, it organizes work-

shops and sponsors symposia on chemical education.

\*Chemical industry throughout the world is closely involved in the work of IUPAC? IUPAC has links with approximately 180 Company Associates in over 20 countries.

\*IUPAC has formal links with 30 regional and international organizations - Associated Organizations - concerned with chemistry and its applications?

\*IUPAC publishes conference proceedings, definitive volumes of chemical data and compendia on nomenclature, quantities, symbols and units (the famous Green, Red, Blue and Orange books)?

\*IUPAC publishes the scientific journal *Pure and Applied Chemistry* which cuts across disciplinary boundaries to present major research in all areas of chemistry?

\*You too can become involved with IUPAC and thus have an opportunity of influencing the affairs of chemistry at an international and interdisciplinary level through the IUPAC affiliate membership scheme?

*Chemistry International* is the IUPAC news magazine providing you with answers to these and many other points... Can you afford not to subscribe?

## Subscription Information

*Chemistry International* is published bi-monthly. Subscription rates for 1991 are for institutions £37.50 (UK & overseas) and US\$58.00 (USA & Canada) and for individuals US\$33.00(USA & Canada) and £21.00(UK & elsewhere) post free.

The American Chemical Society Presents  
The New, Unifying Bimonthly Journal of Conjugation Chemistry

# Bioconjugate Chemistry

**Editor:** Claude F. Meares  
Dept. of Chemistry, Univ. of California, Davis  
Davis, CA 95616 (916/752-3360)

**Associate Editor:** Paul S. Miller  
Sch. Hygiene/Pub. Health, Dept. Biochem.,  
The Johns Hopkins University

## Centralized Access Is Here!

Featuring highly technical, primary literature in biomedically related R&D, *Bioconjugate Chemistry* centralizes information previously published in some 200 different scholarly journals. It brings together—in one source—research forming the core of breakthroughs in biotechnology from universities, research institutes, biomedical firms, drug companies, and chemical laboratories.

Specifically, *Bioconjugate Chemistry* addresses the joining of two different molecular functions by chemical or biological means. No other journal has this unique, topical focus:

### Conjugation of . . .

antibodies (and their fragments)  
nucleic acids and their analogues ( $\alpha$ -anomers, phosphonates, . . .)  
liposomal components  
other biologically active molecules (receptor-binding proteins, hormones, peptides, . . .)

with each other or with any molecular groups that add useful properties . . .

drugs, radionuclides, toxins, fluorophores, photoprobes, inhibitors, enzymes, haptens, ligands, etc.

In bimonthly issues you'll explore the chemical aspects of conjugate preparation and characterization, including:

- *In vivo* applications of conjugate methodology;
- Molecular biological aspects of antibodies, genetically engineered fragments, and other immunochemicals;
- The relationships between conjugation chemistry and the biological properties of conjugates.

## Guided by a "Who's Who" In the Field
