

Professor Don Tilley

US Associate Editor for inorganic, organometallic and materials chemistry, *ChemComm*

ChemComm is the leading international journal for the publication of communications on important new developments in the chemical sciences.

Each one of ChemComm's US Associate Editors is happy to receive submissions from the Americas in their subject area.

T. Don Tilley is Professor of Chemistry at the University of California, Berkeley. His research involves synthetic, structural, and reactivity studies in organometallic systems. Metal-mediated routes to new polymers, and molecular approaches to the designed construction of advanced solid state materials and heterogeneous catalysts are also being developed.

Call for papers!

Professor Tilley is pleased to receive papers on important developments in inorganic, organometallic and materials chemistry. Submit today at www.rsc.org/resource

For enquiries, please contact:
Professor Tilley at chemcomm@berkeley.edu

17050525

Why publish in ChemComm:

- Impact factor: 4.031
- Rapid publication – typically 60 days (from receipt to publication)
- Now: weekly publication
- 3 page communications – providing authors with the flexibility to develop their results and discussion
- 40 years publishing excellent research
- High visibility – indexed in MEDLINE
- 'Hot papers' are highlighted – helping authors to promote their work
- FREE colour where scientifically necessary
- FREE inclusion in Chemical Biology Virtual Journal

Submit today!

An international, high quality journal covering the full breadth of synthetic, physical and biomolecular organic chemistry.

See for yourself - examples of forthcoming papers are listed below

For further details and free access to Issue 1, visit

Emerging Area

One-pot multi-step synthesis: a challenge spawning innovation

D. Tyler McQuade, USA

Perspective

A comparative analysis of the total syntheses of the amphidinolide T natural products

Timothy Jamison, USA

Communications

Synthesis and biological evaluation of lipophilic iron chelators as protective agents from oxidative stress

Avraham Shanzer, Israel

Efficient terpene hydroxylation catalysts based upon P450 enzymes derived from Actinomycetes

Nicholas Turner, UK

Articles

The first synthesis and cytostatic activity of novel 6-(fluoromethyl)purine bases and nucleosides

Michal Hocek, Czech Republic

A phase-switch purification approach for the expedient removal of tagged reagents and scavengers following their application in organic synthesis

Steven Ley, UK

Synthesis of the antitumor agent

David Mootoo, USA

Flexible self-assembling porphyrin supramolecules

Maxwell Gunter, Australia

Stereoselective synthesis of conformationally constrained ω -amino acid analogues from pyroglutamic acid

Mark Moloney, UK
