## A Chemical Approach to Nanomaterials

By Geoffrey A Ozin and André C Arsenault

- Interdisciplinary and comprehensive
- Presents a basic chemical strategy for making nanomaterials
- Describes some of the principles of materials self-assembly over 'all' scales
- Demonstrates nanometre and micrometre scale building blocks
- Suggests new ways to tackle research problems
- Includes speculations on how to think about assembling the future of nanotechnology

*Nanochemistry: A Chemical Approach to Nanomaterials* is well illustrated with graphical representations of the structure and form of nanomaterials. It contains many pedagogical features and will appeal to graduate and advanced undergraduate students.

Hardcover | 0 85404 664 X | 2005 | 594 pages | £39.95 | RSC member price £25.75

RSC Publishing

[www.rsc.org/books/nanochemistry](http://www.rsc.org/books/nanochemistry)

A high quality, high impact journal publishing accessible, succinct and reader-friendly reviews in all areas of the chemical sciences.

Impact factor: 10.836

See for yourself - examples of reviews are listed below

## Issue 9

Vibrational spectroscopy: a vanishing discipline?

*Robert J. Meier*

Selective extraction of naturally occurring radioactive Ra<sup>2+</sup>

*Fijs W. B. van Leeuwen, Willem Verboom and David N. Reinhoudt*

Coupling reactions of zirconocene complexes and hetero-substituted alkenes

*José Barluenga, Félix Rodríguez, Lucía Álvarez-Rodrigo and Francisco J. Fañanás*

Thioglycosides in sequential glycosylation strategies

*Jeroen D. C. Codée, Remy E. J. N. Litjens, Leendert J. van den Bos, Herman S. Overkleeft and Gijsbert A. van der Marel*

Proton, electron and energy transfer processes in excited phenol-olefin dyads

*M. Consuelo Jiménez, Miguel A. Miranda and Rosa Tormos*

### Critical Review

Dinitroso and polynitroso compounds

*Brian G. Gowenlock and George B. Richter-Addo*

## Forthcoming Reviews

Variable temperature infrared spectroscopy: A convenient tool for studying the thermodynamics of weak solid-gas interactions

*Edoardo Garrone and Carlos Otero Areán*

Supramolecular gels: Functions and uses

*N. M. Sangeetha and Uday Maitra*

Recent advances in the use of phosphorus-centered radicals in organic chemistry

*Dominique Leca, Louis Fensterbank, Emmanuel Lacôte and Max Malacria*

Predictive thermodynamics for condensed phases

*Leslie Glasser and H. Donald Brooke Jenkins*

Ru-based oxidation catalysis

*Mario Pagliaro, Sandro Campestrini and Rosaria Ciriminna*

### Critical Review

Nucleoside 5'-triphosphates: self-association, acid-base, and metal ion-binding properties in solution

*Helmut Sigel and Rolf Griesser*
