COMMUNICATION

Gianluca Accorsi *et al.*
Photophysical properties and tunable colour changes of silica single layers doped with lanthanide(III) complexes

FEATURE ARTICLE

Xun Wang and Yadong Li
Monodisperse nanocrystals: general synthesis, assembly, and their applications

1359-7345(2007)28;1-1

ChemComm

Make an impact

***ChemComm*, a leading weekly international journal for the publication of communications on important new developments, supplies a vibrant blend of high quality research from across the chemical sciences.**

With rapid publication times, a rigorous peer review process and an impact factor of 4.426, *ChemComm* has high visibility (indexed in MEDLINE) and is the perfect choice for work that commands universal respect.

Offering the flexibility of a 3 page communication limit and additional unique features such as html enhancement with our new Project Prospect (www.projectprospect.org), *ChemComm* celebrates more than 40 years of publishing excellence with a service that's out of this world.

Submit your work to *ChemComm* now and get light years ahead of the competition!
