COVER ARTICLE
Zhou et al.
The crystallography of three isostructural zinc complexes with unusual polyazawazine motifs

HOT ARTICLE
Van de Streek
A library of single molecules (including hydrates) from the Cambridge Structural Database

COMMUNICATION
Matrangolo et al.
Infrared microscopy determines crystal stoichiometry in halogen-bonded supramolecular complexes

CrystEngComm brings you fast breaking research on all aspects of crystal engineering including properties, polymorphism, target materials and new or improved techniques and methods.

With extremely fast publication times (typically within 8 weeks of receipt), fully interactive graphic features, a rigorous peer review procedure and an impact factor of 3.729, *CrystEngComm* publishes only the best research and offers a multitude of benefits to authors and readers alike.

Specialised searching

The graphical abstracting services at the RSC are an indispensable tool to help you search the literature. Focussing on specific areas of research they review key primary journals for novel and interesting chemistry.

requires specialised tools

Methods in Organic Synthesis provides information on reaction schemes, new reactions and new methods. Topics include functional group changes, the introduction of chiral centres, and enzyme and biological transformations.

59453 Tandem radical rearrangement/Pd-catalysed translocation of bicyclo[2.2.2]octanones. An efficient access to the oxa-triquinane core structure

Org. Biomol. Chem., 2006, 4(8), 1464-1467

5 examples (90-92%)

Reaction scheme: A bicyclo[2.2.2]octanone derivative reacts with a Pd complex and TfIF at 0°C to -78°C to form an oxa-triquinane core structure.

The online database has excellent functionality. Search by: authors, products, reaction, reactants and reagents.

With Methods in Organic Synthesis you can find exactly what you need. Search results include diagrams of reaction schemes. Also available as a print bulletin.
