## SPECIALIST PERIODICAL REPORTS

### Environmental Chemistry Vol. 2

Senior Reporter: H. J. M. Bowen

The first volume of this series was published in 1975 and emphasized environmental organic chemistry whereas this second volume is deliberately slanted towards inorganic chemicals, covering the broad fields of the atmosphere and the hydrosphere, soils, and human diets. Reviewers of all these subjects agree that far too little information is available on the chemical forms of the elements in environmental reservoirs, thus laying down a challenge to analytical chemists. A broad review of mycotoxins is however included partly to redress the balance of inorganic topics.

## SPECIAL PUBLICATIONS

### The Modern Inorganic Chemicals Industry

#### 2nd Reprint

Edited by R. Thompson

Modern inorganic textbooks rarely make more than passing reference to current industrial processes and an up-to-date textbook on industrial inorganic chemistry is hard to find. This volume aims to fill that gap by providing an authoritative account of all the major tonnage chemicals of the inorganic sector and some minor tonnage chemicals with high value derivatives where the chemistry has added interest.
