Faraday & Faraday Discussions & Symposia

Faraday Discussions take place twice a year and are designed to cover the broad aspects of physicochemical topics, thereby encouraging scientists of different disciplines to contribute their varied viewpoints to a common theme.

Three recent *Discussions* are:

No. 72 Selectivity in Heterogeneous Catalysis

The result of a *Discussion* held at the University of Nottingham, September 1981, this publication covers: Selective Oxidation and Hydrogenation, CO-H₂ and Methanol Reactions, Polymerizations and Enantioselective Processes. Newer catalyst systems to be featured will include: Bimetallics, Shape-selective zeolites and Anchored Complexes.

Soft cover 431pp 0 85186 708 1
Price £30.75 (\$63.25) RSC Members £20.00

No. 73 Van der Waals Molecules

The object of this *Discussion*, held in April 1982 at St. Catharines College, Oxford, was to increase understanding of Van der Waals Molecules. Topics included in this publication — a result of the above *Discussion* — include:

Spectroscopy and Photophysics of Organic Clusters; Energetics and Dynamics of large Van der Waals Molecules; Van der Waals Molecules and Condensed Phases; Gas-phase Properties and Forces in Van der Waals Molecules; Dimer Spectroscopy; Intermolecular Binding.

Soft cover 431pp 0 85186 688 3
Price £25.25 (\$51.75) RSC Members £16.50

No. 74 Electron and Proton Transfer

This *Discussion*, the result of a meeting held at the University of Southampton, September 1982, covers: Fundamental Aspects of the Chemical Kinetics of Electron and Proton Transfer Reactions in Solution with particular reference to well defined Biological Systems.

Chapters include: Electron, Proton and Related Transfers; Quantum Effects on Electron-transfer processes; Fast Electron-transfer Reactions; Hydride Transfer between NAD⁺ Analogues; Electron and Proton Transfers in Chemical and Biological Quinone Systems.

Price £25.00 (\$51.00) RSC Members £16.25

Faraday Symposia are usually held annually and are confined to more specialised topics than *Discussions*, with particular reference to recent rapidly developing lines of research.

Two recent *symposia*:

No. 15 Chromatography, Equilibria and Kinetics

No. 15 in the series is the result of a meeting held at the University of Sussex in December 1980.

The resulting publication covers the processes controlling separation through the underlying physical chemistry of the subject, in addition the advantages of the chromatographic techniques for the study of the physical chemistry of surfaces, equilibria and kinetics are highlighted.

Softcover 191pp 0 85186 728 6
Price £28.00 (\$57.50) RSC Members £18.25

No. 16 Structure of the Interfacial Region

This publication is based on the symposium held at the Physical Chemistry Laboratory, Oxford, December 1981, and covers: Liquid-Vapor Interfaces; Solid-Fluid Interfaces; Interfaces Formed by the Adsorption of Complex Molecules such as Polymers and Surfactants.

Softcover 256pp 0 85186 698 0
