NEW..a monthly current awareness bulletin giving worldwide coverage in the field of synthetic chemistry...

METHODS IN ORGANIC SYNTHESIS

The massive amount of literature published these days in the field of synthetic chemistry makes it a laborious and time-consuming task to find just the items YOU want.

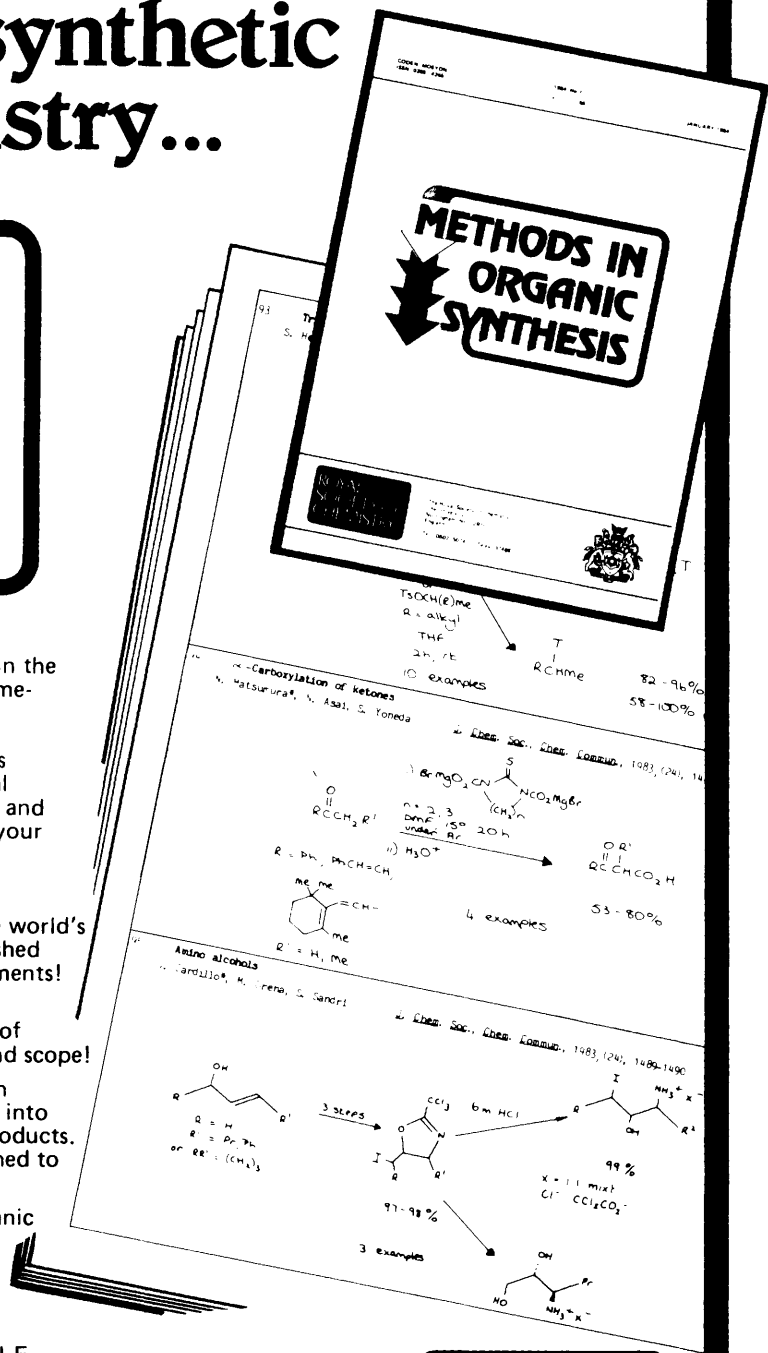

METHODS IN ORGANIC SYNTHESIS (MOS) provides current and cost-effective coverage of novel and unusual reactions and reaction schemes, keeping you up to date and saving you the time, effort and expense of performing your own literature searches.

MOS contains over 200 items per issue, drawn from the world's major primary organic chemistry journals, and published within weeks of the appearance of the original documents!

MOS items include titles, bibliographic details and **STRUCTURAL DIAGRAMS** or **LINE FORMULAE** of reaction schemes with details of conditions, yields and scope!

MOS issues each contain five comprehensive indexes: an Author Index, and a Keyword Subject Index divided into four sections: Reactants, Reactions, Reagents and Products. These indexes are cumulated annually, and are designed to give you easy access to items of particular interest!

MOS also includes books and reviews of interest to organic chemists!
